LIST OF ANNUAL SUBSCRIPTIONS
TO
THE ORIENTAL TRANSLATION FUND

GREAT BRITAIN AND IRELAND.

For Royal Paper Copies of the Works Published by the Fund.

HIER MOST EXCELLENT MAJESTY THE QUEEN.

His Royal Highness the Prince Albert.

The Count de Neuilly.

His Majesty the King of the Netherlands.

His Majesty the King of the Belgians.

His Imperial and Royal Highness the Grand Duke of Tuscany.

His Royal Highness the Duke of Cambridge.

His Grace the Duke of Somerset.

His Grace the Duke of Buccleuch and Queensbury.

His Grace the Duke of Devonshire.

His Grace the Duke of Northumberland.

His Grace the Duke of Wellington.

The Most Honourable the Marquess of Lansdowne.

The Most Honourable the Marquess of Northampton.

The Most Honourable the Marquess of Anglesey.

The Most Honourable the Marquess of Cholmondeley.

The Right Honourable the Earl of Clare.

The Right Honourable the Earl of Brownlow.

The Right Honourable the Earl Amherst.

The Right Honourable the Earl of Ripon.

The Right Rev. the Lord Bishop of Winchester.

The Right Honourable Lord Bexley.

The Right Honourable Lord Lyndhurst.

The Honourable Mountstuart Elphinstone.

The Honourable the East India Company.
The Athenæum, *London*.
The Wesleyan Missionary Society.
The Asiatic Society of Bengal.
The Bombay Branch of the Royal Asiatic Society.
The President and Fellows of Magdalen College, *Oxford*.
The Library of Exeter College, *Oxford*.
The Provost of Trinity College, *Dublin*.
The Royal Library, *Hanover*.
The Royal University, *Leyden*.
The Royal Library, *Munich*.
The Royal Library, *Berlin*.
The Imperial Library, *Vienna*.
The Imperial Academy of Sciences of St. Petersburg.
Nathaniel Bland, Esq.
Beriah Botfield, Esq.
Charles Purton Cooper, Esq.
James Ewing, Esq.
Major-General Edward Frederick, C.B.
Hudson Gurney, Esq., F.R.S.
Louis Hayes Petit, Esq.
Alexander Raphael, Esq.

For Demy Paper Copies.

The Right Honourable the Earl of Ellesmere.

The Right Reverend the Lord Bishop of Calcutta.

The Honourable R. H. Clive, M.P.

Sir G. G. de H. Larpent, Bart.

Count Miniscalchi.

Dr. J. D. Macbride.

The Rev. G. C. Renouard, M.A.

Edward E. Salisbury, Esq.

James Thomason, Esq.

John Walker, Esq.

The Imperial University, Dorpat.

The London Institution.

* * It is requested that those Individuals or Institutions who are willing to subscribe to the Oriental Translation Fund will send their names, addressed to "The Secretary of the Oriental Translation Committee, Royal Asiatic Society's House, No. 5, New Burlington Street, London;" and inform him where their subscriptions will be paid. The Amount of Subscription is Ten Guineas Annually, for large paper copies; and Five Guineas for small paper copies.

MEMOIR

ON

CUNEIFORM INSCRIPTIONS.

CHAPTER VI.

VOCABULARY OF THE ANCIENT PERSIAN LANGUAGE, CONTAINING
ALL THE WORDS WHICH OCCUR IN THE PERSIAN CUNEIFORM
INSCRIPTIONS, ACCOMPANIED WITH A FEW BRIEF ETYMOLOGICAL
EXPLANATIONS.

𐎠 a and á¹.

𐎠 𐎠𐎠𐎠 𐎠𐎠𐎠 𐎠𐎠𐎠 𐎠𐎠𐎠 AKHSHATA', [No. 4, l. 23, p. 282*,] *Extensa* (?), *infracta* (?). This may be either the nom. sing. (fem.) of a verbal noun in 𐎠, from the root 𐎠𐎠𐎠, "to reach," or "pervade," or it may be the same case of a past participle corresponding with the Sanskrit 𐎠𐎠𐎠, "unbroken;" (𐎠, neg. and 𐎠𐎠, "broken.") It occurs but once, in the phrase *hyá duvaishtam shiyátish akhshatá*, which I translate, with some hesitation, "the longest enduring life"².

𐎠 𐎠𐎠𐎠 𐎠𐎠𐎠 𐎠𐎠𐎠 AGATA', [Col. I., l. 21, p. 199,] *Religious* ? *Peccator* ? In rendering the passage in which this word occurs, I have supposed *agatá* to be employed in contradistinction to *arika*, the one signifying "a true believer," and the other "a

¹ Words in which the initial 𐎠 merely represents the temporal augment will be found under the head of their respective roots.

² The figures placed in brackets after each word of the vocabulary, refer to the pages of the preceding volume in which the word first occurs.—ED.

³ Lassen translates *akhshatá* by "incolumis," following the same etymology which I have given; but he has certainly altogether misunderstood the general application of the sentence. See the Zeitschrift, &c., vol. VI., p. 69.

heretic;" and in order to justify such an explanation etymologically, I am obliged to conjecture that the root अङ्ग, which has produced अग्नि, "fire," (considered as an object of worship), अङ्गति, "a name of Brahmā," &c., may have originally had some more definite meaning than that of "counting," or "marking," which now alone appertains to it in the classical Sanskrit; but I will not pretend to claim much respect for so hazardous a reading. It is more probable, I think, that *agatā* may be the nom. masc. sing. of a noun in ङ from the root अघ, "to sin," and that the entire phrase *martiya hya agatā āha, avam 'ubaratam abaram*, may signify "whatsoever man was an evil doer, him I heavily oppressed (or punished')." The identification, in fact, of *agatā*, must entirely depend upon the sense in which is understood the root *bar*, (Sans. ब्र,) that has produced the participle 'u-baratam and the imperfect *abaram* in the same sentence. In every other passage of the inscriptions *bar* signifies "to bear," or "bring²;" but, as the correspondent of the Sanskrit ब्र, it may also imply "cherishing," and perhaps even (although it is not in the causal form,) it may be interpreted "to load," or "oppress;" for the compound सुभर is translated by Wilson "heavily-burthened³."

ॐ -१८ १८३ ॥ १८३ ॐ ĀJAMIYĀ, [No. 3, l. 19, p. 275,] *Bellum*? There are numerous difficulties connected with this word. It occurs in the prayer which is addressed by Darius to Ormazd for the protection of Persia against various moral evils; and which, as it presents a very embarrassed construction, I shall examine at some length. The assistance of Ormazd is in the first place invoked to guard the country *hachā haindyā, hachā dushiyārdā, hachā daraugā*; which I translate "from servitude,

¹ In this view the figure of speech employed will be the increment rather than the antithesis, for the application of the two phrases which occur in juxtaposition will be almost coincident.

² Compare 'upastām abara, "he brought help," *bājim abaratā*, "they brought tribute;" also *baratiya* in the present, and *baratuwa* in the imperative.

³ If the signification were "I oppressed," I should certainly expect to find the orthography of *abār(a)jam*, and I leave the interpretation therefore of the phrase above quoted, as one of the points which I consider to be still doubtful.

from decay, from (the vice of) lying¹;" and we have then in continuation *āniya imdm dahydum mā ājamiyā*², *mā hainā*, *mā dushiyāram*, *mā darauga*. Now as the three particular objects of evil from which danger is apprehended are thus severally repeated, it would certainly be most reasonable to suppose *āniya imdm dahydum mā ājamiyā* to be a distinct phrase, and to translate the entire sentence—"Let not the enemy obtain power over this country, nor servitude, nor decay, nor the vice of lying;" otherwise, if we take *āniya* for the verb, not only will the construction, which places the governing verb before the object and the nominative, be most irregular, but a fourth evil (*ājamiyā*) will be enumerated which does not occur in the preceding sentence. I find it, however, impossible to identify *ājamiyā* as a verb; if the root were *jam*, the temporal augment of the aorist would be lost after the interdictory particle; if, on the other hand, we suppose a root corresponding with the Sanskrit अज्, the inflexion in *amiyā* will be wholly inexplicable. I must add, also, that the final elongation (𑀓) is almost conclusive against *ājamiyā* being a verb, for that inflexion cannot, I think, in the language of the inscriptions, occur after *mā*; (compare *biyā* and *mā biyā*.)

A further source of embarrassment is found in the uncertainty whether the first word of the sentence be *āniya* or *abiya*. Niebuhr and Porter have 𑀅𑀲, which Westergaard alters to 𑀅𑀬, and Lassen adopts the latter reading throughout his Memoir. If *āniya* be correct, there would seem then to be no resource but to follow the construction which I have adopted in the preceding

¹ Lassen, relying on a Zend etymology, translates *dushiyāra* by "scarcity," (lit. "bad year;") I shall consider hereafter the propriety of this reading. See Lassen's Mem. above quoted.

² The words *aniya* and *ajamiyā* afford a good example of the serious inconvenience which arises from the impossibility of distinguishing the quantity of the initial 𑀓. In *ājamiyā*, the vowel must, I think, be elongated; but the context can alone show whether 𑀓 𑀅𑀬 𑀲 𑀓𑀲, may represent the Sanskrit अज्, or whether it may be derived from अयायी.

³ See paragraphs 11 and 17 of the 4th column, at Behistun. The interdictory *mā* requires to be joined to the aorist or imperfect without the augment, forms in which a servile long *ā* can very rarely occur.

chapter, and to suppose the word, notwithstanding its displacement, to be an aorist of **आणी** governed by the nouns which follow it. If on the other hand the true reading should be *abiya*¹, a preposition governing the accusative which is of the most frequent employment in the inscriptions, I would suppose the subjunctive of the substantive verb to be understood. In either case *ajamiya* must be the nom. sing. of a feminine abstract noun, and that it is connected in signification with *haind* may be inferred from its omission in the preceding sentence. As the latter word, therefore, may be rendered with some confidence by "servitude," I venture to translate the other "war," (literally, "war-scattering"); *dja* differing in its inflexion only from the Sanskrit **जनि**, and *miya* being perhaps formed from **मि**, "to scatter," according to Rule 831 of Wilkins. This etymology is far from satisfactory, but I have failed to obtain any other at all suitable to the context². If it be considered necessary to bestow further enquiry on the subject, I would draw attention to the facts, that the Devanagari **ह** is an equally legitimate correspondent with the **ज्ञ**, for the Cuneiform **𐎧𐎠𐎧**; and that a sibilant may very possibly have been elided before the **𐎧𐎠𐎧**, so that if there were any Sanskrit compound of the form of *ahasmi* or *ahasmya*, that orthography would present the least objectionable equivalent.

𐎧𐎠𐎧 **𐎧𐎠𐎧** **𐎧𐎠𐎧** ATARA, [Col. I., l. 21, p. 199, and Col. II., l. 78, p. 223.] *Inter.* A preposition governing the accusative case.

¹ In the Supplement to Lassen's Memoir, which has reached me since the above was written, I perceive that he rejects Westergaard's emendation of *aniya* for *abiya*, and that the latter gentleman acquiesces in this restoration of the old reading. See the Zeitschrift, p. 470. We must therefore, I think, translate the sentence in question, "*ad hanc provinciam ne (sint), &c., &c.*"

² Lassen translates *ajamiya* by "*hiemis tempestas*," supposing the Cuneiform term to be allied to the Sanscrit *hima*, Zend *syáo*, (acc. *syām*), Latin *hiems*, &c. See the Zeitschrift, p. 33; but I must observe on the one hand, that the initial

𐎧𐎠𐎧, which cannot be an unmeaning prosthesis, presents an insuperable etymological difficulty; while on the other, however applicable to the feelings and condition of the primitive Arian emigrants from Imaus may have been the dread of the horrors of winter depicted in the second *Fargard* of the *Vendidad*, it seems preposterous to suppose that any such apprehension could have existed amongst the inhabitants of the sunny plains of Persia.

Compare the Sanskrit अन्तर; Zend , *antarē*; Persian اندر, *andar*; Latin "inter," &c. It is very possible that the orthography of this word may be *atar*, the *r* being a letter which as a final is not subject to elision. I prefer, however, following the Zend termination, and supposing the suffix of comparison, which forms the second element of the term, to be *tara* rather than *tar*, in the language of the inscriptions.

 ATIYÁISHA, [Col. III., l. 72, p. 237.]
Transivit. 3rd pers. sing. act. imperfect of a verb compounded of the particle of excess, (Sanskrit अति), and of a root *āish*, answering to the Sanskrit एष्. इष्, and एष्, appear to be cognate roots¹, but that the latter is the true correspondent of the Cuneiform *aish* may be inferred from our observing that the verb in the inscriptions follows the first instead of the fourth conjugation, as well as from the orthography of the compound *atiyāisha*, where the medial  must represent a radical letter, rather than the mere augment of past time. *Ati*+*aisha* (the latter being the imperfect of *ish*), would I believe be written *atiyaisha*, without the employment of any character to express the temporal augment. To account for the elongation of the *a*, we must suppose a root *aish*, forming in the imperfect *āisha*; the terminal  of the Sanskrit imperfect is as usual elided in the Cuneiform correspondent; एष् in Sanskrit signifies "to go," or "approach;" *aish* in the inscriptions is used exclusively in the sense of "coming;" with the particle *fra*, (Sans. ) and in the causal form it denotes "sending," while the present compound can only be translated, "he went beyond," or "he went in." In the Notes on the Cuneiform Text, and in the explanation which I have given of the 11th paragraph of the 3rd column at Behistun, I have noticed certain difficulties connected with the orthography of this word², as well as with the construction of the

¹ For a full examination of the Cuneiform roots *ish* and *aish*, see under the head *ish*.

² My rough copy gives the reading of *Atiyādasha*, but as the letters were much defaced, I must I think have mistaken  for .

sentence in which it occurs; and I consider it therefore, at present, to be unnecessary to bestow any further inquiry on the subject.

kins, and the inflexion in *iya* corresponding regularly to the Sanskrit locative in *ī*); but with the adjunct of the imperative *par(a)śā*, I translate the phrase idiomatically, "utterly destroy," or "or cast out into utter perdition." For further observations on the word, see the notes to the fourteenth paragraph of the fourth column at Behistun, (p. 253). The Median correspondent of the term is unfortunately mutilated, and affords little or no assistance therefore in identifying its grammatical condition.

ÁTHAG-AINA, [No. 10, l. 1, p. 314,] *Ædificatore* or *Ædificatiōne*.

ÁTHAG-ANÁM, [No. 19, lines 29, 30, p. 342,] *Ædificium.*

I have examined these obscure words at considerable length in the notes which I have added to Nos. 10 and 19, but I have failed to identify them at all to my satisfaction¹. That a root *thag* may have existed in the language of the inscriptions, intermediate between the Sanskrit **सग्**, (perhaps originally **शग्**), and the Greek **τέγω**, Latin "tego," may be reasonably admitted, and that the application of such a root may have been extended from "covering," to "building," is also sufficiently approved by Greek and Latin analogies; but there still remains the difficulty of ascertaining the power and grammatical condition of the derivatives. I had supposed the termination in *áthagina* to be the ablative inflexion of a noun formed with the suffix of agency, (Sans. **इन्**)², while in *áthaganam* I have conjectured that we have the accusative of a noun of attribution, formed with **अन** or **अना**³, but the alteration of the orthography from *áthagina* to *áthagaina*, which

¹ Professor Lassen continues up to the present time to compare the Cuneiform *thag* with the Persian طاق, (see *Zeitschrift*, pp. 75 and 472), but the latter word is a pure Arabic derivative, (طاق, "an arch," from طوق, "to be equal,") and could not have been known in Persia prior to the Mohammedan conquest. I hardly see moreover how he obtains from this source the meaning of "substructio."

* See Wilkin's Grammar, Rules 106 and 769. The suffix in *tn* is very commonly employed in Zend, and is preserved also in the modern Persian. Compare شیرین, "sweet;" زرین, "golden;" سنگین, "heavy;" رنگین, "coloured," &c.

* See Wilkins, Rules 824 and 833.

follows from my discovery of the exclusive employment of  with the vowel *a*, is fatal to the former explanation. If *athagaina* could be considered a nominative, there would certainly be less difficulty in translating the window-inscription of the palace of Darius; but this identification, again, appears impossible, for the suffix in  forms that case in , and the termination also of the Median correspondent is, I think, that which belongs to the genitive or instrumental, and not to the nominative¹. In translating, therefore, *Arđastána áthagaina Dárayava(h)ush naqahyá vithiyá karta*, while I doubtingly adhere to the reading before given of "Executed by Arđastá the architect, for the family of King Darius," I suppose the ending in *aina* to be the regular instrumental characteristic of a theme in *a*, (Sans. ). In the other phrase *imam 'ustashanám áthaganám mám upa mám kartá*, "I have executed this well fashioned piece of masonry for my own use," I am not prepared at present to propose any alteration; the conjunction of a masc. pronoun *imam* with a noun formed by the feminine suffix in *anú*, is, I think, a barbarism

¹ Where the Median reproduces a Persian word, of course the termination in *na* may occur in the nom., but I doubt exceedingly if the Median *axanna* be a reproduction of the Persian *áthagaina*, for the initial letter is that which uniformly answers to   and not to  alone.

² I must observe, however, that the termination in *aina* is otherwise entirely unknown in the inscriptions, and that as it is evidently a secondary and artificial form for the instrumental, it is highly improbable that it should have co-existed with the primitive ending in long *a*, which occurs in every other Cuneiform example on record; *aina*, in fact, contains three distinct etymological irregularities; the *a* of the base is changed to *ai* () a euphonic *n* is then added, and the true instrumental case-suffix  is shortened to . See Bopp's Comp. Gram., s. 158. At the same time, I cannot identify *aina* as the nom. of a suffix either of agency or attribution, and I am obliged therefore to remain content with its possible correspondence with the Sans. . I must add, also, as a further correction of the translation given in the text, that even admitting *athagaina* to be an instrumental, *Arđastána* cannot possibly represent that case. *Arđastána* for *Arđastána* may be gen. or an ablat., but neither am I satisfied that those cases are ever used for the instrum., nor do I think that a gen. or abl. noun could possibly be joined to an instrument. adjective. If, therefore, *áthagaina* be really the instrumental of the noun *áthaga*, perhaps the best translation may be "made by the labour of Arđastá, for the family of King Darius." For further remarks see the note to *Arđastána*.

which could only appear in the degraded inscriptions of Artaxerxes Ochus; but it is equally possible that the noun may be really in the masc. gender, the true suffix of attribution being **अन**, and the second *a* in *anám* being irregularly lengthened. I must add, that, unwilling as I always am to admit of an unmeaning prosthesis, I conjecture the initial **𐎠** to be the particle **आह**, prefixed to the root for the express purpose of altering the signification from "covering" to "building."

𐎠 𐎠𐎵 𐎠𐎹 𐎠𐎶 ATHIYA, [Col. I., l. 91, p. 213,] *Juxta* or *Exadversus*. I am not quite certain of the orthography of this word, but I believe the form of *athiya* to be correct. It is a preposition governing the accusative case, and probably corresponds with the Sanskrit **अनि**, the Devanagari nasal lapsing as usual before a dental, and the *t* being perhaps subjected to aspiration in order to mark a distinction between this term and the particle **अति**, which is found in *atiyáisha* and *atifrashtádiya*. Whether at the same time the signification be that of "near," which appertains to the Sanskrit **अनि**, or whether the Cuneiform particle may not rather be compared in its application, as in its form, with the Greek *ἀντί*, "over against," I cannot pretend to say; for *athiya* occurs but in a single passage of the inscriptions, and there is no correspondent either in Zend or Persian.

𐎠 𐎠𐎵 𐎠𐎶 𐎠𐎹 𐎠𐎶

ATHUR-Á, [Col. I., l. 14, 15, p. 197, &c.'], *Assyria*.

ATHUR-ÁYÁ, [Col. II., l. 53, p. 221,] *Assyriá*.

Under this form we have the true primitive orthography of Assyria. The Greeks, as it is well known, usually write the name Ἀσσυρία, but in Strabo, Arrian, and Stephen* we find Ἀρσυρία, and in Dio Cassius Ἀρρυρία, the latter author particularly adding that the

* It would be tedious and unprofitable to enumerate all the passages in which each particular word occurs. The reference is usually to the first passage in which the word is found, following the order of the inscriptions as they are given in the preceding chapters.

* See Strabo XVI., s. 52; Arrianus Alexander, l. III., c. 7; and Stephen, in voce *Néas*, where however he merely quotes from Strabo. Suidas repeats the quotation under the same head.

barbarians changed the *sigma* to a *tau*¹. Among the races who dwell upon the Upper Tigris, there seems indeed to have always been some uncertainty as to the pronunciation of the name. The Persian *Athurá* is rendered in the Median *Assura*²; and the Chaldee Targums, both of Onkelos and Jonathan, give the form of תַּרְסָנָא for the Hebrew תַּרְשָׁנָא³. In Arabic, the orthography of اثور has been always followed, and the title is still known in the country as a name for the ruins of that ancient and magnificent capital, which is being at present excavated under British auspices⁴. It is very remarkable, that in the Samaritan Pentateuch the name of *Assur* or *Athur* should be altered to *Astun*, a degradation of phonetic powers precisely analogous to that which in Pehlevi has converted *Mithra* or *Mihir* to *Matún*, and which I believe enters largely into the organization of the language of the Median Inscriptions⁵. The *Athurá* of Behistun and Persepolis is undoubtedly the province of Assyria. The name is inflected as a feminine noun of the first declension, and the termination in *áyá* may be certainly considered as an abbreviation of *áyás*, the terminal *visarga*, as I have before observed, lapsing in the ancient Persian after *a*; *आयः*, however, in Sans. is the sign of the genitive or ablative of themes in long *á*, while, on the contrary, we may determine *Athuráyá* to be unquestionably a locative (geographical names in the language of the inscriptions being always placed in that case, although with a

¹ Dio Cass. l. LV., s. 28.

² The name of Assyria I also believe to be extant in the Babylonian Inscription on the grave of Darius, but I cannot yet satisfy myself of its exact orthography.

³ See Reimar's note to Dio Cass., tom. II., p. 1141, and Walton's Polyglot Bible, p. 39.

⁴ The Arabic Geographers always give the title of *Athúr* to the great ruined capital near the mouth of the Upper Zab. The ruins are now usually known by the name of Nimrud. It would seem highly probable that they represent the site of the Calah of Genesis, for the Samaritan Pentateuch names this city *Lachisa*, which is evidently the same title as the *Λάπισσα* of Xenophon, the Persian *r* being very usually replaced both in Median and Babylonian by a guttural. (Compare the *Chabaesoarach* of Berosus with the *Laborosoarchod* of Josephus.) If Nimrud be Calah, the name of *Καλαχνη* attaching to the province will be sufficiently explained, but Resen, named by the Samaritans *Aspa*, will still have to be discovered.

⁵ Upon this connexion depend very important ethnographical considerations which I shall expose in the sequel.

genitive signification), and it is satisfactory therefore to find that in the Vedas such an inflexion does actually occur with a locative meaning and, as I believe, representing the true locative case¹. The Cuneiform locatives, indeed, strongly support the inference, which is also deducible from the Zend, that the terminal *m*, employed in the inflexion of this case in many of the Sanskrit declensions, is a degradation of a primitive *s*; चायां could not become *áyá*, nor could *iyá* and *uvá* be modified from यां and वां. The locative feminine inflexions, which in the language of the inscriptions are *áyá*, *iyá*, and *uvá*, unquestionably represent Sanskrit terminations in *áyás*, *yás*, and *vás*, and we may confidently assume therefore that the final *m* which is now used is comparatively a modern corruption.

to me why the quantity of the vowel, preserved in the inflexion of the 3rd person, (*ná* for ना), should be suppressed in that of the first (*nam* for ना); and this difficulty is of equal prominence, whether we follow the etymology given above, or whether we vary the conjugation from the ninth class to the first, and, founding upon the Latin *ten-eo*, suppose the root to be *din* rather than *di*¹. There are two other forms in the inscriptions, *ditam* and *didiya*, which appear to be derived from the same root in its crude state, (that is, without the prefixing of the privative particle); but these forms afford no assistance in determining whether the Sanskrit base end in *i* or *n*, for the nasal lapses in the inscriptions before a dental, and *ditam* and *didiya* may possibly therefore be for *dintam* and *dindiya*.

I will only add that, as the Cuneiform 𐎠𐎡𐎢𐎣 replaces an aspirate and a lingual as well as a dental, a correspondent may be sought in other languages of the form of *hin* or *lin*, as well as that of *din* or *tin*, and that if any such root should exist with the sense of "deprivation," we must alter the quantity of the initial vowel in *adiná*, and suppose the 𐎠𐎡𐎢𐎣 to represent the mere temporal augment. The verb in the inscriptions uniformly governs a double accusative; as in *Gaumáta hya Magush ádiná Kabujiyam utá Pársam utá Mádam*, "Gomates the Magian dispossessed Cambyzes both of Persia and Media;" *Adam khshatrámshim ádinam*, "I dispossessed him of the empire," &c.

𐎠𐎡𐎢𐎣 𐎠𐎡𐎢𐎣 𐎠𐎡𐎢𐎣 𐎠𐎡𐎢𐎣

ATRIN-A, [Col. I., l. 74, p. 209,] proper name, *Atrines*.

ATRIN-AM, [Col. I., line 76, p. 209,] *Atrinem*.

The name of Atrina, which is borne in the inscriptions by the chief who excited a revolt in Susiana immediately after the accession of Darius, is not to be found I believe in Grecian history. It

¹ That is, *din* in the first conjugation should make the 1st pers. sing. of the imperf. in *ádinam* and the 3rd pers. in *áдина* (for *ádinat*), with the short instead of the long *a*. Examples, moreover, of the above regular formation of the verbs of the first class are so common in the inscriptions, that the final 𐎠𐎡𐎢𐎣 in *ádiná*, may be held determinately to remove the root from that conjugation.

² I do not at present remember any form with this sense in the cognate languages which will admit of a possible comparison, but the Scottish *fhàit*, "lost."

is doubtless of Arian etymology, and is in all probability of cognate derivation with the Sanskrit अश्वि'. In representing this name, the Median and Babylonian alphabets, incapable of expressing the compound *tř* of the Persian language, alter the power to a sibilant, and write *Assina* or *Ashina*.

 ATRIYÁTIYA-HYA [Col. I., l. 89, p. 211, &c.,] *Atriatís*. This was the name of a month in the ancient Persian Calendar, and may certainly be compared with the Sanskrit अत्रिजात, the Cuneiform  being, as I think, a regular correspondent for the Devanagari ज. The suffix in the Sanskrit name is जात. In the Cuneiform correspondent it may be जात, with the i interposed to break up the groupe ty, but I doubt whether this identity of form may authorize us in supposing the early Persians to have adopted the fable regarding the double birth of the Moon from the eye of Atri and from the Ocean, from which etymologists derive the Sanskrit compound. Possibly the name of *Atriyáta* was applied to the moon by the Arian race previous to the bifurcation of the Indian and Persian branches, and was subsequently adopted by the latter into their calendar without any reference to the original meaning. I have before observed, that in the Cuneiform orthography of the word the  and  are employed indifferently, but I am now inclined to think I must have been mistaken in the former reading*; the Median form is *Assiyátiya*. The names of the months occur in the inscriptions only in the genitive case, and it is remarkable that those names which are of the first declension give the

¹ **खद्दि** is supposed by the grammarians to be derived from **खद्**, "to eat," but no great dependence can be placed on the explanations of these fanciful etymologists.

* It was the apparent interchangeability of the letters $\Xi\Upsilon$ and $\Sigma\Upsilon\Upsilon$ in the orthography of the terms *pridiya* and *Al'griyátiya*, that induced me, against all etymological evidence, to class the former character among the surd dentals; but I have corrected this error in my Supplementary Note on the Alphabet, p. 179. In the 38th line of the Nakhsh-i-Rustam Inscription, I also think in the word *yadipatiya*, the doubtful character which I have restored as $\Xi\Upsilon$ must be altered to $\Sigma\Upsilon\Upsilon$. See p. 301.

the pronominal suffix of the 2nd pers. The Median correspondent for *ada* in Westergaard's Inscription of Nakhsh-i-Rustam is read in two different ways. In line 35, the form (although with a slight difference of orthography) is the same in pronunciation as that which answers in other passages to the demonstrative *ava*, and its signification of "that," is thus placed almost beyond the reach of dispute; but in line 36, either Westergaard's copy is incorrect, or the inflexion of the pronoun has been altered. I cannot explain with any certainty the reason why the neuter characteristic should be dropped in *adataiya*, but I observe the same peculiarity in the declension of the demonstrative *ava*, which as the neuter accusative, is *avashchiya* with the indefinite particle, but *avataiya* with the pronominal suffix¹; and I infer therefore that the neuter termination in *as* being regularly in the inscriptions contracted to *a*, whether it occur singly or in composition, is alone restored to its original form (strengthened by an aspiration) when it precedes a suffix commencing with the palatal *ch*, which letter, both in Zend and in the ancient Persian, has the prosodial power of the enclitical particles.

𐎠𐎡𐎴𐎠𐎡𐎴 ADAM, [passim.] *Ego*.^{*} The pronoun of the 1st person has been so frequently examined and so extensively compared by philologists, that in explaining the Cuneiform inflexions I need do little more than present their Sanskrit and Zend correspondents. In the inscriptions we have the following forms:—

SINGULAR.

Nom.	<i>Adam</i>	(Sans. अहं)	Zend 𐬀𐬵𐬌𐬎, <i>azēm</i> . ²)
Accus.	<i>Mām</i>	(Sans. मां)	Zend 𐬌𐬎𐬎, <i>mām</i> .)
Ablat.	<i>-ama</i>	(used as an affix).	
Gen. used also for Instrum. and Dative	<i>Maná</i>	(Sans. मन)	Zend 𐬌𐬎𐬎𐬎, <i>mana</i> .
			Pers. من)

PLURAL.

Nom.	<i>Vayam</i>	(Sans. वयं)	Zend 𐬵𐬀𐬎𐬎, <i>vaēm</i> .)
Gen.	<i>Amákham</i>	(Sans. अस्माकं)	Zend 𐬀𐬌𐬎𐬎𐬎𐬎𐬎, <i>ahmákēm</i> . Pali <i>amhákam</i> .)

¹ From observing many other examples, I can now affirm that it is a fixed rule of the old Persian language, that the pronominal neuter characteristic, whether it be *s* or *t*, should be every where elided except before the indefinite particle *chiya*.

² In examining the Babylonian writing, I have become aware of a connection

The singular suffix in *maiya*, answering to the Sans. मे *mé* (for *mai*), and Zend 𐬨𐬀 *mé*, is also of a very frequent employment, and represents indifferently the possessive pronoun "meus," without reference to case, or the instrumental, dative, or genitive of the personal pronoun. The plural suffix has not yet, I believe, been discovered.

I will now add a few remarks on the different forms. *Adam* occurs either singly, or in composition with the suffixes of the 3rd person, *adamshiya*, *adamshim*, and *adamshám*, signifying respectively, "ego illius," "ego illum" (or "illos,") and "ego illorum."

In the classical inscriptions of Darius and Xerxes *mám* is exclusively used as the accusative, but in the degraded language of Artaxerxes Ochus it appears, contrary to all rule, to usurp the place of the nominative, and in that capacity to govern a verbal noun. Compare *mám upá mám kartá*, "ego in meum usum factor," and *tya mám kartá*, "quod ego factor."

The ablative *ama* (for *mat*) is only met with in composition after a preposition governing that case, as in *hacháma*, "a me," and perhaps in *pravama*, "ante me," although this last identification is doubtful¹.

between the forms of the pronoun of the 1st pers. in the Arian and Semitic languages, to which I must devote a brief explanation. In the Arian languages we may take the Sans. *ah* as the true base, which has become *as* in Zend; *ad* in old Persian; *éy* in Greek; *eg* in Latin; *ih* in Goth; *ih* in old Ger.; *ass* in Lithuanian; *as* in old Slavonic, &c. To this base has been added in many of these languages a suffix, for the purpose, as it would seem, of specification, and we have thus *ah-am*; *as-əm*; *ad-am*, *éy-ów*, whence *éy-ó*, and *ego*. Now, the same base has been employed in the Semitic languages, but instead of the suffix in *am* being appended, it has been prefixed to the pronoun under the form of *an*, (which seems to mark it as a definite article,) and in most of the later languages this article has remained as the dominant element, while the true base has been almost lost. Thus in Babylonian, preceded by the distinctive sign, we have *ak* or *aka* for *ego*, but without the sign, *anak* or *anaka*; and in the same way we have the compound forms 𐤀𐤍𐤊 in Heb.; 𐤀𐤎𐤓𐤕 in Coptic; and *lawya* in Æolic Gr.: whilst in the

Heb. 𐤀𐤎; the Chald. 𐤀𐤎𐤊; the Syr. ܐܢ; the Arab. ٱن; and Æth. 𐌠: the true base has been almost absorbed in the article. The same analysis must be applied to the 1st pers. plur. as well as to the pron. of the 2nd pers. Compare Bopp's Comp. Gr. s. 326; Pritchard on the Celt. Lang. p. 110; Gesen. Lex., Eng. Ed. p. 79; and Conant's Translation of the *Lehrgebäude*, p. 38, foot note.

¹ That this affix is *ama* rather than *ma* is proved, I think, not only by the orthography of *pravama*, but by that also of *anuvama*, which would otherwise be written *paruma* and *anuma*, and we have here therefore the same base with a euphonic prosthesis which occurs in the Gr. ἐμὲ, ἐμοῦ, ἐμῶν, &c., and in the

The genitive *mand*, which only differs from the Sanskrit मन् in the modification of the nasal and the dialectic elongation of the terminal *a*, is the form which has been most usually adopted as a base, not only in the languages of the Arian family, but in those also of the various branches of the great Scythic race. I do not exactly understand upon what inflexional principle this genitive is formed either in Sanskrit or old Persian, but there can be no doubt, I presume, of the identity of the terminations in *ma* and *na*. When the Cuneiform term is united to a suffixed particle, the final elongation is suppressed, as in *manachá*, "meique," (Ins. No. 3, lines 9, 10,) and its true orthography therefore is precisely similar to that of the Zend 𐬨𐬀𐬢𐬀, *mana*¹.

The plur. nom. *vayam*, common to the Sanskrit, the Zend, and the old Persian, is derived from a base, *vé*, which may possibly be a mere corrupted inflexion of the singular *ma*, but which, as it is also found in the Goth. "*weis*;" old Germ. "*wir*;" Eng. "*we*," &c., must under its own form be of great antiquity². Another plur. base also, *asme*, which occurs in the Vedas, and which answers to

Pers. affixed *am*. It is doubtful, however, if in *anuvama* the affixed *ama* does not represent the locative rather than the ablat. case, for in the phrase *anuva 'Ufrá-tauvd*, the former appears to be the case employed.

¹ For observations on this gen. form, see Bopp's Comp. Gr. s. 330, and consult the extensive list of cognate Scythic forms given by Pritchard in his *Researches into the Physical Hist. of Man*, vol. IV., p. 390, and by Klaproth, in his *Sprach-atlas*, pp. 16, and 30, 31.

² If *vayam* stand for *vé + am*, as philologists are now agreed, it follows that the Zend *vaém* should be equal to *vai + ém*. According to Burnouf, however, 𐬨𐬀𐬢𐬀 can only be explained as a contraction of *aya*, and the Zend therefore is not a primitive but a secondary form, less ancient than its Cuneiform correspondent. (See Yaçna, sur l'Alph. Zend, p. 55.) The termination in *é* being the regular pronominal plural characteristic, *vé* must be referred to a sing. *va*, and that this *va* again is in its origin identical with *ma*, the base of the oblique case in the singular, is rendered extremely probable by the analogy not only of the Scythic, but of the Semitic plurals. Thus in all the Turkish dialects the plur. is formed by a suffix of number, from the singular. Conf. Mong. *bi*, I, and *bi-da*, we; Mandshu, *bi* and *be*; Turk. *ben* and *bir*, and particularly Finnish *ma* and *me*; and in the Semitic languages it must be observed, that the terminal *na* or *nu*, which distinguishes the 1st person plur. is also in reality a suffix of plurality, evidently allied to the plural-ending in verbs and in masculine nouns, in all of which a nasal is the chief element. Thus 𐤁𐤏𐤍 is the plur. of 𐤁𐤏, and retrenching the prefixed article and the plur. sign 𐤁, we find the singular base 𐤁 exchanged for 𐤁. In the same way the 𐤁 in 𐤁𐤏𐤍, the Arab. correspondent of 𐤁𐤏𐤍, is the

the Gr. *ἄναις* (for *ἄναις*), has produced the gen. *anākhām*, a form of which I have already given the correspondents in Sanskrit, Zend, and Pali, and which is properly a possessive rather than a personal pronoun¹.

𐎠𐎡𐎹𐎶𐎠𐎡𐎹𐎶

ĀNAYA, [Col. II., l. 88, p. 226,] *Adduxit*.

ĀNAYAM (?) [Col. I., l. 87, p. 211,] *Adduxi*.

ĀNAYATĀ, [Col. I., l. 82, p. 210; and Col. II., l. 73, p. 223,] *Adducebatur*.

ANIYA (?) [Col. V., l. 12, p. 258,] *Adductus est*.

These forms are derived from the root 𐎠𐎡𐎹𐎶 with the prefixed particle 𐎠𐎡𐎹𐎶. *A'naya* answers to either 𐎠𐎡𐎹𐎶 or 𐎠𐎡𐎹𐎶, the 3rd pers. sing. or plural of the active imperfect, and *anayam* (if that term is really found in the inscriptions) will be the 1st pers. sing. of the same tense. *A'nayatā* expresses regularly the Sanskrit 𐎠𐎡𐎹𐎶, and should represent therefore the 3rd pers. sing. of the middle imperf. In both the passages, however, where the word occurs, there is some difficulty regarding it. In the one it is, I believe, united to the past participle *basta*, and in the other it is impossible to ascertain from the broken fragments now alone visible upon the rock, whether the true orthography be *ānayatā* or *āniyatā*. The context, at the same time, clearly shows that it is used with a passive signification; and perhaps, therefore, in the compound *bastānayatā*, "vinctus adducebatur," the middle voice may have that power².

𐎠𐎡𐎹𐎶 true pronominal base which has been lost in the sing. 𐎠𐎡𐎹𐎶. It is remarkable, however, that in almost all the Arian tongues, in the plural of the 1st pers. the pronominal base has given way altogether to the suffix of number; for we can hardly doubt that the nasal in 𐎠𐎡𐎹𐎶, 𐎠𐎡𐎹𐎶, Lat. *nos*; Russ. *nas*; Welsh *ni*, &c. is to be thus explained. The Median plurals are of great importance in illustrating this question, and will be considered hereafter.

¹ For Bopp's remarks on *asmé* and *asmākam*, see Comp. Gr. s. 332, and the "Remark" added to section 340. He clearly shows that the termination of *asmākam* is a possessive suffix allied to the Hindustani *kā, kē, kī*. In the Cuneiform *amākhām*, the lapse of the sibilant before the nasal is regular, but I am quite unable to explain the reason of the aspiration of the guttural.

² I shall have repeated occasion hereafter to notice the employment of the middle for the passive voice, as in *ayaubātā*, "he was called;" *agarbāyatā*, "he was seized," &c.

while in the 13th paragraph, of the second col. at Behistun, the term employed may be *aniyatá* answering to the Sans. pass. imperf. अनियत.

I observe, that in the 13th and 14th paragraphs of the second col. at Behistun, the Median correspondents for *ánaya* and *ánayatá* (or *ániyatá*), are those which usually express the idea of "sending;" but I cannot reconcile such an interpretation with Sanskrit etymology, and conjecture accordingly the substitution of "sending" for "bringing," to be an instance of careless translation.

In my previous notes on the fifth col. at Behistun, and on Ins. No. 3, p. 276, I have supposed that *ániya* may be a form of the aorist, substituted for the Sanskrit अनिषीत् or अनेह; but this is, to say the least of it, extremely doubtful; for in the latter passage the true orthography may very possibly be *abiya*¹, and in the former, owing to the mutilation of the writing, we cannot determine whether *ániya* be really a verbal formation, or whether it may not rather represent the pronoun अन्य, which repeatedly occurs in the inscriptions in other places, inflected nearly in the same manner as in Sanskrit. If *ániya*, in line 12 of the fifth col. at Behistun, signify "other" or "an enemy," the quantity of the initial letter will be short.

𐎠 𐎡𐎴 𐎠𐎡 ANÁ. See IYAM.

𐎠 𐎡𐎴 𐎠𐎡 𐎠𐎡𐎴 𐎠𐎡 ANÁMAKA-HYA, [Col. I., l. 96, p. 213, &c.,] *Anamakis*. In this title, which is applied to one of the months of the old Persian Calendar, we have probably the "unnamed," (अनानक,) or intercalary month of India. In the Persian year it followed soon after *Garmapada*, and I conjecture it therefore to have occurred at the autumnal equinox. The termination in *hya* is the regular genitive inflexion of the first declension (Sans. ह्य).

¹ See the notes to *ájamiyá*, where I have shown that the reading of *ániya* for *ábiya* adopted by Lassen, on the authority of Westergaard, has been since retracted. I believe, therefore, that *ániya*, as a derivative from the root अनी, must be rejected from the Vocabulary.

ॐ < ॐ < ANIYA. This is the exact equivalent of the Sans. अन्यः, and the Latin "alius;" the *l* and *n* being to a certain extent interchangeable letters'. That *aniya* in the inscriptions follows the pronominal declension, as in Sanskrit, is shown by the ablative form *aniyaná* for *anyasmát*, instead of *aniyá* for *anyát*; as well as by the nominative neuter, which gives the orthography of *aniyash*, (with the developement and aspiration of the visarga peculiar to pronouns), before the enclitical particle *chiya*. We have the following cases of the pronoun in different passages of the inscriptions.

SINGULAR.

Nom. masc. *Aniya*, (Col. I., l. 95, p. 213, and Col. III., l. 32, p. 232.) Sans. अन्यः

Nom. neut. *Aniyash-chiya*, (Col. IV., l. 46, p. 247, and No. 15, l. 13, p. 329.)

Accus. masc. *Aniyam*, (Col. l. 86, p. 211.) Sans. अन्यं

Ablat. masc. *Aniyaná*, (No. 4, lines 20, 21, p. 282.) Sans.

अन्यस्मात्

Gen. masc. *Aniyahyd*, (Col. I., l. 87, p. 211.) Sans. अन्यस्य

PLURAL.

Nom. masc. *Aniyá*, (Col. IV., lines 61 and 62, p. 252.) Sans.

अन्ये

Nom. fem. *Aniyá*, (Col. I., l. 41, p. 201.) Sans. अन्याः

Accus. fem. *Aniyá*, (Col. I., l. 47, p. 203, and l. 67, p. 205.)

Sans. अन्याः

Locat. fem. *Aniyá'uvá*, (Col. I., l. 35, p. 200.) Sans. अन्यासु

' According to Bopp, the Sans. अन्य is formed of the base अन् and the relative य, and this appears to be fully borne out by his analysis and examples. See Comp. Gr. s. 374, where the following terms are compared: Sans. अन्य; Latin *alius*; Prakrit *anna*; Goth. *aiya*; Gr. *ἄλλος*; old Germ. *alles*, &c. In the Cuneiform *aniya* the *i* is undoubtedly euphonic, being introduced to combine the *n* and *y*, which will not unite in a compound articulation. The base *an* is also extensively employed in Zend.

The inflexions in *aniyashchiya*, in *aniyand*, and in *aniyā'uvā*, are all of orthographical value; the Sanskrit form answering to *aniyash* must have been *अन्यः*, instead of *अन्यत्*¹, and the visarga elided as a terminal (as in the nom. masc.) can only have been aspirated after the short *a* by the enclitical power of the indefinite particle, a power which is analogous in principle, though not exactly assimilating in operation, to that possessed by the Zend *𐬀𐬎𐬭*, of preserving intact, both in form and quantity, the inflexion to which it is appended².

In *aniyand*, independently of the suppression of the silent terminal, we have a modification of the nāsāl from *m* to *n*, and the elision of the preceding sibilant³. In *aniyā'uvā*, also, we have, 1st, the substitution after the *a* of the base, (which is elongated as a mark of gender) of an aspiration inherent in the Cuneiform *𐬀𐬎𐬭*, for the sibilant of the Sanskrit locative affix; 2nd, the introduction of an euphonic *v* to connect the *u* with the dissimilar vowel *a*; and 3rd, the dialectic elongation of the latter vowel as a terminal, an elongation which also occurs in the genitive *aniyahyd*⁴.

¹ I have before observed, that where a terminal *s* does occur in a Sanskrit neuter, as in *अन्यः*, it is considered by Bopp to be the weakened form of a primitive *t*, (see Comp. Gr. s. 350,) but perhaps the Cuneiform examples of *aniyash* and *awash* may change the Professor's opinion.

² For a full explanation of the enclitical power of the Zend *𐬀𐬎𐬭*, see Yaçna, p. 27, and Bopp's Comparative Grammar, (Eng. Edit.) p. 163. Rosen also has a note on the enclitical power of the Vedic *chana*, in his explanation of l. 7, Hymn xviii. of the Rig Veda. See his "Adnotationes," p. xliv.

³ If Bopp's theory be true of the common derivation of the Sanskrit pronominal inflexions from the particle *sma* appended to the base, we should expect to find the same orthography in the ablat. *aniyand*, and in the genitive *amākhām*, the one being for *anya-smāt*, and the other for *a-smākam*; I cannot pretend to dispute his theory, (Comp. Gr. s. 166 and 183,) supported as it is by Zend and Pali analogy, yet the uniform employment of the suffix in *nā* for the old Persian pronominal sing. ablat. (compare *aniyand* with *and* and *tyand*,) certainly indicates a distinction from the particle *ma* (for *sma*), which occurs in the plur. of the 1st person.

⁴ On further consideration, I prefer comparing the Cuneiform inflexion in *'uvā* (for *huvā*) with the primitive Sans. *ह्य*, which in Zend has become *𐬀𐬎𐬭*,

There is some doubt attaching to the nom. plur. *aniyá*. According to the context of the passages where the term occurs, it would certainly appear to represent that case, being in apposition with the nom. *A'uramazdá*; but on the other hand it is united to a noun *Bagáha*, which, if a nominative, is irregularly formed, and other pronouns in the inscriptions are found to form the nom. plur. masc. in *iya*, which answers regularly to the Sanskrit इ¹.

The Cuneiform *aniya* has the double acceptation of "other" and of "an enemy," a confusion of sense which has its counterpart in the double employment of the Latin "hostis." Its principal use, however, in the inscriptions, is to denote the dependent provinces of the Persian empire, those which are "other" or different from the supreme states of Persis and Media; and I am strongly inclined therefore to believe, that in this distinction we may discover both the origin and meaning of the famous Sassanian expression, *Iran* and *Aniran*, the latter title being a mere contraction of *Aniya Irán*, and signifying literally, the provinces which are "other" or "different" from those comprised under the special appellation of *Irán*².

𐎠𐎡𐎹 𐎠𐎡𐎹 𐎠𐎡𐎹 𐎠𐎡𐎹 *ÁNIYA*, *adductus est*. See *ANAYA*.

𐎠𐎡𐎹 𐎠𐎡𐎹 𐎠𐎡𐎹 𐎠𐎡𐎹 *ANUVA*, [Col. I., l. 92, p. 213,] *Secus, secundum*.

I compare this particle with the Sanskrit अनु, which, although properly signifying "after," has in its application to rivers, the special meaning of "along" or "upon." In the language of the inscriptions, however, the preposition governs a locative, instead of an accusative case, the Cuneiform expression occurring of

hva, rather than with the contracted form of सु. For an explanation of this point, see under the head *dahyashuvá*.

¹ *Bagáha* is formed like the Vedic ब्रह्मन् and like all the Zend plur. nominatives in 𐎠𐎡𐎹𐎠𐎡𐎹, *doñhó*. (See Comp. Gr. a. 229.) *Aniya* also may be supposed in the old Persian to follow the adjectival as well as the pronominal form of inflexion, and *aniyá* will thus be the regular correspondent of अनु.

² The expression *anaiyáo dānghávo* occurs in the Zend Avesta, in the hymn to *Ashtad*, and is undoubtedly, therefore, of very high antiquity. Burnouf believes the prefix to be the mere privative particle, and translates accordingly, "the non-Arian provinces." I prefer, however, considering *an* to be a contraction of *aniya*. See Yagna, Notes, &c., p. lxii.

ANUSHIYĀ, [Col. I., l. 58, p. 204, &c.,]
Assectatores. The signification of this word, which is of a very frequent employment, is certainly that of "followers" or "adherents," and I suppose it, therefore, to be compounded of अनु, "after," and of an adjective formed with the suffix in *ya*, from बि, "to bind." The root *shi*, however, is used in the inscriptions simply to denote "going," as in *ashiyava*, "he went," and it may thus possibly have the same sense in the present compound. The terminal म् is the characteristic of the nom. mas. plur. for the Sans. अः. Remark also, that the Sanskrit sibilant of the root, (supposing it to be identical with बि, "to bind,") which as an initial is modified to an aspirate in *haina*, takes the aspirated form of *sh* in *anushiya*, owing to its interposition between the vowels *u* and *i*.

ΑΡΑΓΑΥΔΑΥ-ΑΨΥΑ, [Col. IV., lines 56, 57, p. 251,] (Si) celes.

I suppose that we have here the root गुह्, "to conceal," preceded by the part. ञप्, and conjugated according to the tenth class, or in the causal form*. *Apagaudaya* appears to be the 2nd pers. sing. of the active imperfect, (or perhaps the aorist,) the terminal

’ In col. 4, l. 53, at Behistun, we have, I think, also the compound term *anuvama*, “after me,” formed like *hachâma* and *paruvama*; and as the affix of the 1st pers. in *hachâma* is certainly in the ablat. case, we must either suppose that *ana* governs the ablat. as well as the locat., or that *ama*, as an affix, represents the two cases indifferently.

॥ **ग** is Sanskrit, is of the first class, and is moreover one of the few roots which, in the causal form, lengthen the vowel **अ** to **आ**, instead of introducing the *guna*; so that it is impossible to say in the Cuneiform *gaudaya*, whether we have a change of conjugation from the first to the tenth class, or whether it may not rather be the regular *gunaed* causal form. The change also of an aspirate to a dental as a radical letter is suspicious.

visarga of the Sanskrit being dropped after *a*, and the temporal augment (which would give *apāgaudaya*) being also elided, as the term is preceded by the interdictory particle *mā*. In *apagaudayāhya*, we have probably the 2nd pers. sing. of the present subjunctive, for the term is preceded by the conditional particle *yadiya*, "if," and according to Sanskrit analogy, the vowel of the personal suffix in the indicative mood would not require to be elongated. The *aya* subjoined to the root I consider to be the causal or conjugational characteristic.

𐎠𐎡𐎴𐎧𐎺𐎠𐎢𐎴𐎠𐎢𐎴 APATARAM, [No. 6, l. 18, p. 293, and No. 14, l. 25, p. 327,] *Aliter, Alibi*. This is certainly an adverb implying "difference" or "distinction," and I explain it therefore as a compound of the particle 𐎠𐎢𐎴, cognate with the Greek *ἀνθ*, and the comparative suffix in *taram*, which is very frequently employed in Zend¹.

𐎠𐎡𐎴𐎧𐎺𐎠𐎢𐎴 APARAM, [Col. IV., l. 37, p. 245, l. 42; p. 246, l. 70, p. 253, l. 76, p. 254,] *Post hac*. 𐎠𐎢𐎴 in Sanskrit, as a neuter adjective, signifies properly "other" or "different," but it is used in the Vedas with a special application to posteriority of time, and the Zend 𐎠𐎢𐎴𐎠𐎢𐎴 conveys the same meaning². In the inscriptions, *aparam* can only be translated "hereafter" or "in future times."

𐎠𐎡𐎴𐎧𐎺𐎠𐎢𐎴 ĀPIYA, [Passim,] *Etiam*. This word, which occurs in the formulary of the royal titles so frequently repeated in the Achaemenian Inscriptions, is supposed by Lassen to be a derivative from 𐎠𐎢𐎴, "to obtain." As I perceive, however, that in

¹ This adverb must have been very early used with a special reference to a difference of time as in the English "after," for the Chaldee 𐤀𐤏𐤍𐤏, "at length," (Ezra iv. 13,) and the Pehlevi *afdom*, "the last," (as in *Ardešvān el Afdom*, Artabanus the last Arsacidan king), are unquestionable cognate forms, the *r* according to custom being changed to a nasal.

² Burnouf has fully examined the Zend 𐎠𐎢𐎴𐎠𐎢𐎴, *aparem*, and compared it with the 𐎠𐎢𐎴 (in *posterum*) of the Rig Veda, in the continuation of his Zend researches, published in the Asiatic Journal of Paris. See *Journal Asiatique*, IV^{me} Série, tom. V., No. XXIII, p. 296.

the Median writing the term, is usually considered unworthy of translation, and that where it is rendered the equivalent is evidently an unimportant particle, I prefer comparing it with the Sanskrit अपि, and considering it a mere copulative conjunction. A further argument in support of this explanation is, that at Nakhsh-i-Rustam, *apiya* is attached to the preceding word, (the orthography being given of *durídpiya* for *duria* + *apiya*), precisely in the same manner as we find the particles *chá* and *vá* to be employed in other passages as copulative suffixes.

signifying "to" or "towards," be a relic of the Zend *abi*, or whether it may not have been rather directly borrowed from a Semitic source, I am hardly prepared to say. As a preposition implying relationship to the object it is scarcely distinguishable from the Hebrew *ב*, and Arabic *ب*, *bi*, but where as a mere redundant particle it is prefixed to the imperative and potential of Persian verbs, it must be referred immediately, I think, to the Zend *𐬀𐬎𐬎*, which, although identical with the Sanskrit *अभि*, is frequently attached to roots without in any way affecting the signification. The Greek *ἐν* is no doubt a cognate particle, both as to form and application.

𐬀𐬎𐬎 𐬀𐬎𐬎 𐬀𐬎𐬎 𐬀𐬎𐬎 𐬀𐬎𐬎 𐬀𐬎𐬎. ABICHARISH, [Col. I., lines 64, 65, p. 205,] *Officia (sancta)*, or *Ministries*? This word, which occurs in an interesting but very obscure sentence at Behistun, is unfortunately of doubtful orthography. If the true reading be *abicharish*, it must be considered, I think, to represent the accus. feminine plur. of a theme in *i*; but if the reading of *abicharabish*, which I have conjecturally proposed in p. 208, should be correct, then we must identify the term as the dative plural of a masc. theme in *a*¹. In either case the etymology will be from the root *𐬀𐬎𐬎*, preceded by the particle *𐬀𐬎𐬎*, and the allusion may be either to the simple act of "service," or, as I prefer believing, to the particular religious observances of the Persian faith, which the Brahmans denounced as magical and malevolent. After much consideration, I propose the following amended reading of the passage in which this word occurs.

Ayad(a)ná	tyá	Gaumáta	hya	Magush	viyaka,
Sacra	quæ	Gomatus	qui	Magus	vetuit,
adam	niya(i)párayam,	kárahya	abicharish,	gai-	
ego	restitui,	(nempe) regni	officia sancta,	canta-	
thámchá,	mániyamchá,	vithabishchá	tyádish		
tionemque,	cultumque,	gentibusque	(ea restitui) quas illis		
Gaumáta	hya	Magush	adiná.		
Gomatus	qui	Magus	orbaverat.		

¹ Gesenius has a curious note on the origin and employment of this particle in the Semitic languages, in his *Lexicon*, (Eng. Ed.) p. 122.

² In Sanskrit *अभिचार* is "a servant," but *अभिचार*, "a magical observance." *Abichari*, perhaps, in the old Persian, is equivalent to the latter term, the suffix *-i* giving the same power as the causal form of the root.

𑀓 𑀥 𑀢 𑀚 ABISH. See AVA and IYAM.

INDICATIVE PRESENT.

- 1st Pers. Sing. *Amiya*, (passim). Sans. अमि. Zend अમિ,
ahmi.
- 2nd do. do. *Ahya*, (Col. IV., l. 37, p. 245, &c.) Sans. अहि.
 Zend अમ, *ahi*'¹.
- 3rd do. do. *Astiya*, (Col. IV., l. 46, p. 247, l. 51, p. 249.)
 Sans. अस्ति. Zend अમ, *asti*.
- 3rd Pers. Plur. *Hatiya*, (Col. IV., lines 61 and 63, p. 252.)
 Sans. सन्ति. Zend. અમ, *heñti*.

IMPERFECT ACTIVE.

- 1st Pers. Sing. *A'ham*, (Col. I., l. 14, p. 197, &c.) Sans. आहं.
- 3rd do. do. *A'ha*, (passim.) Vedic असन्. Zend અમ, *doḡhat*.
- 3rd Pers. Plur. *A'ha*, (Col. I., l. 10, p. 197, &c.) Sans. आसन्.
 Zend અમ, *doḡhēn*.

IMPERFECT MIDDLE.

- 1st Pers. Plur. *A'mahya*, (Col. I., lines 7, 8, and 11, p. 196, 197.)
- 3rd do. do. *A'hata* or *A'hatá*, (Col. III., l. 49, p. 233, and
 Col. I., l. 19, p. 197.)

PRESENT SUBJUNCTIVE.

- 3rd Pers. Sing. *Ahatiya*, (Col. IV., l. 38, p. 245, l. 68, p. 253.)

In the forms of the indicative present, we have the lapse of the sibilant before *m* in *amiya*², and the lapse of the nasal before *t* in *hatiya*. *Ahya* and *astiya* reproduce the Sanskrit forms as nearly as the Cuneiform orthography will admit.

¹ I do not remember to have met with the 2nd pers. sing. pres. of the substantive verb in Zend, but I presume that the form must be *ahi*, agreeably to the orthographical rules of the language.

² M. Burnouf has an excellent note on the suppression in Zend of *s* in the initial group *am*, (Yagna, Notes, &c., p. lxxvii. Note O,) and he explains the substitution of *mahi* for *masi*, in the 1st pers. plur. of the ind. pres. by supposing the personal characteristic to be detached from the root; but this restriction will certainly not apply to the substant. verb in the language of the inscriptions, for the *s* which is lost in *amiya* and *amahya* is radical, and has no connexion with the personal endings.

I have been long in doubt, as to whether the initial **म** in the 3rd pers. of the active imperfect should be elongated. If we suppose the verb to be conjugated regularly, the coalition of the temporal augment with the initial vowel of the root will of course increase the quantity; and we thus, in fact, find the elongation not only in the Sanskrit imperf. **आसीत्** and perf. **आस**, but also in the Vedic **आः**, and in the Zend *aoḡha* and *ás*¹; but I perceive in Westergaard's Radices that there is also a Vedic **असत्** for the 3rd pers. sing. of the imperfect; where, notwithstanding that the verb is of the second class, the short *a* is introduced between the base and the personal characteristic, (as it is introduced likewise in **आदत्** from **अद्**, "to eat";) and I am the rather inclined to adopt this for the true correspondent of the Cuneiform *aha*, (erat), as it will enable us to distinguish between the singular and plural number by a difference of initial quantity, and as there is moreover a third form in Zend of the active imperfect, *aḡhat*, which agrees with the Vedic *asat* in retaining a short vowel at the commencement. I suggest, accordingly, that *aha* in the singular may be for **असत्** and *aḡhat*, and *áha* in the plural for **आसन्** and *aoḡhèn*².

¹ For a full comparison of the Zend and Sans. forms of the past tenses of the substantive verb, see Burnouf's *Yaçna*, Alph. Zend, p. cxviii, and p. 434, note 290.

² See Rad. Ling. Sans., p. 300. It is curious that I do not find this form of *asat*, either in Bopp, Lassen, or Burnouf. The Vedic form which they invariably quote is *ás*. See Lassen's *Ind. Bib.*, tom. III., p. 78; and Bopp's *Sans. Gram.* p. 331. (I have since found *asat* in the *Rig Veda*, Hymn ix., l. 5. See Rosen's *Notes*, p. xxviii.)

³ On further consideration I am disposed to think that this distinction of quantity between the 3rd pers. sing. and plur. cannot be maintained. In the Vedic **असत्**, *asat*, the temporal augment has evidently been dropped, as is very frequently the case in that dialect, and the same explanation is to be given of the Zend *aḡhat*, which is formed without the augment, according to the almost universal rule of that language; as *áham* stands for **आहं**, *ásam*, so *áha* in the sing. must be for *ásat*, and in the plur. for *ásan*. The latter term, indeed, actually exists, and the former, (as Bopp has remarked, *Comp. Gr.* s. 532,) was probably the true and original form of the modern **आसीत्**, *ásti*. The object of the Sans. in irregularly introducing a conjunctive vowel after the root, (notwithstanding that the verb is of the 2nd class,) has been to prevent the personal characteristics from

I take the forms of the middle imperfect from the regular Sanskrit conjugation of **अस्** preceded by the preposition **अस्मि**, *dhata* and *dmahya* answering to *dsata* and *dmahi* in **अस्मात्** and **अस्मात्सहि**. There is only occasion to remark, that in the Cuneiform *dhata* the terminal vowel is optionally elongated, and that the Sanskrit *dmahi*, if it occurred in the Vedas, would probably be written *dmasi*, (as we have *masi* for *mah* in the present), the termination in *si* being the regular correspondent of the Cuneiform *hya*¹. The 3rd pers. sing. of the middle imperfect does not, I believe, occur in the inscriptions, but it would no doubt be written *ástá*, for the Sanskrit *asta* in **अस्तात्**².

We have hardly a sufficient number of examples in the inscriptions to be able to determine with any certainty the rules upon which are formed the different tenses of the subjunctive mood; but with regard to the present tense of that mood, we may I think presume that it is distinguished from the indicative by the employment of a servile *a* prefixed to the personal characteristics. If the verb accordingly be of the second class, we shall have for the terminations of the 3rd pers. sing. *tiya* in the indicative, and *atiya* in the subjunctive, while in verbs of the first

being lost, but there are only a few roots in the language, or **अस्**, "to be," **अद्**, "to eat," and the class **रुदादि** in which the peculiarity is found. In the old Persian the preservation of the personal endings in *dsat*, *dsas*, and *dsan*, was impossible, owing to the orthographical law of elision of the silent terminals; but the conjunctive vowel, which was first used with a view to that preservation, has been nevertheless retained. I am not sure that *āghat* and *āghēn* are genuine forms of the active imperfect of the indic. mood in Zend; the forms of *uḡhat* and *uḡhēn* without the augment of past time are more regular, but still it is with the former that we must compare the Cuneiform *dha*. See Comp. Gr. s. 530 sqq., and Yaçna, Notes, p. cxiv.

¹ Bopp, however, considers *mahi* in the 1st pers. plur. of the mid. imperf. as an abbreviated form of *madhi*, comparing it with the Greek *μεθα* and the Zend *maidhē*, in the same way as he derives *mahi* in the primary forms from *madhē*. It is perhaps, indeed, only in the active pres. tense that there is any reason for supposing the Vedic dialect to have employed a termination in *masi*. Compare Bopp's Comp. Gr. ss. 439, 472, and 536, with Yaçna, Notes, p. lxx.

² I am not aware that we have the middle imperfect of the sub. verb standing alone, either in Zend or in the Vedic or classical Sanskrit. I follow Wilkins, (p. 187,) and Bopp's Comp. Gr. s. 544, for the forms which occur in composition, supposing the verb to be conjugated regularly in this tense according to the second class.

conjugation, the respective endings will be *atiya* and *átiya*. A similar rule also appears to have prevailed in the Vedic Sanskrit and in Zend; *bhaváti* in the one, and *mairiyáiti* in the other, affording examples of the introduction of an additional *a* before the personal suffix of the subjunctive present¹.

𐎠 𐎡𐎴𐎧𐎺𐎠 𐎠 𐎡𐎴𐎧𐎺𐎠 AMUTHA, [Col. II., l. 71, p. 223, and Col. III., lines 41, 42, p. 233,] *Illinc*. I compare this word with the Sanskrit अमुतस्. The lapse of the silent terminal *s* is perfectly regular, but I am unable to explain the aspiration of the dental. In other adverbs, the Cuneiform 𐎡𐎴𐎧𐎺𐎠 replaces a Sanskrit च, or Zend 𐎠𐎡𐎴𐎧𐎺𐎠, as in *yathá* for यथा, and *avatha* for 𐎠𐎡𐎴𐎧𐎺𐎠; here, however, the termination is the ablatival suffix in *tas*, and the orthography appears to be needlessly irregular². Wilson translates अमुतस् by "hence;" but the pronoun अद्स्, into the declension of which the compound base *amu* largely enters, has the signification of "that," as well as "this;" and I find from a note in Rosen, that in the Vedas the pronoun is usually employed to express the remote demonstrative³. I translate accordingly "from thence," as that meaning is alone applicable to the context.

𐎠 𐎡𐎴𐎧𐎺𐎠 𐎠 𐎡𐎴𐎧𐎺𐎠 AYAD(A)NÁ, [Col. I., lines 63, 64, p. 205,] *Sacra* (*sine victimis*?) My explanation of this word must be in a great measure conjectural. It certainly refers to some form or species of divine worship, and may be presumed therefore to be a derivative from the root यज्ञ, but whether the initial 𐎠 be the particle 𐎠𐎡𐎴𐎧𐎺𐎠 or the negative prefix, can only be inferred from the context. यज्ञ in Sanskrit, (as well as 𐎠𐎡𐎴𐎧𐎺𐎠, *yaçna*, and 𐎠𐎡𐎴𐎧𐎺𐎠, *yazna*, in Zend,) is applied particularly to "sacrificial

¹ I find the Vedic *bhaváti* quoted by Westergaard in his Median Memoir, p. 390, and *mairiyáiti* occurs in the Vendidad Sadé, p. 240. Bopp also exemplifies this rule by further Vedic, Zend, and Greek examples in his Comparative Grammar, s. 713.

² There is, however, the same irregular aspiration of the dental as the initial letter of *thataís*, "then."

³ See Rosen's Adnotationes to his Spec. Rig Ved., p. xxiv.

worship"; and according, therefore, to the quantity of the Cuneiform prefix will that meaning be extended or reversed. Referring, then, to the passage in which the word occurs, and which I have translated literally under the head *Abichariak*, I think that I perceive a difference between the sacrificial worship of the Magi and the religious rites of the people, which consisted exclusively of certain outward "observances" (*abichariak*), of "chanting" (*gaithám*), and of "reverential adoration" (*mániyam*). These popular and simple rites, accordingly, I conjecture to have been named *ayad(a)ná*, from their being unaccompanied by sacrifices or oblations¹, and such may we perhaps suppose to have been the form of worship re-established by Darius after the overthrow of the Magi, and the fearful retribution with which that class was visited—a retribution of which the memory so long survived in the annual feast of the *Μαγοφόνια*². I will only add, that the change of the Sanskrit sonant palatal to the sonant dental is according to an acknowledged law of permutation; that I have suggested the introduction of a short *a* between the root and the suffix in *na*, as I am doubtful if the Cuneiform language will admit of a hard group such as *dn*; and that *ayad(a)ná* must be the accus. plur. of a feminine noun of the first declension, the relative *tyá* which follows being necessarily of that gender.

𐎠 𐎡𐎴 𐎠𐎹 𐎠𐎶 𐎠𐎶 𐎠𐎶 AYASTÁ, [Col. I., l. 47, p. 203, and Col. III., l. 4, p. 228, and lines 42, 43, p. 233.] *Cum*. This is a preposition governing the accus. case, which is I believe without

¹ For an analysis and explanation of these Zend terms, see *Yaçna*, pages 7 and 21.

² Herodotus particularly mentions the absence of all the paraphernalia of sacrificial worship in the devotions which the Persians paid to the Gods, *οὐτε βωμοὺς ποιεῖνται, οὐτε πῦρ ἀνακαίουσι μέλλοντες θύειν· οὐ σπονδὴν χρίωνται, οὐκ ἀλῶ, οὐ στέμματα, οὐκ οὐλῆσι*, but he still asserts that a victim was immolated, while the sacred chant was being performed, *μάγος ἀνὴρ παρεστὼς ἑπαιδεῖ θεογονίην*. Lib. I., c. 132. In support of my theory I may further observe, that while the Assyrian and Babylonian sculptures abound with representations of sacrificial worship, there is not a single trace at Persepolis of the immolation of victims.

³ The *Magophonia*, which is commemorated by Herod. l. 3, c. 79, as well as by Ctesias and Agathias, has been a fruitful source of difficulty to these modern writers, who suppose Darius to have been the founder rather than the subverter, of Magism. See particularly the bungling explanation given by the Abbé Foncher, in his Paper on the Second Zoroaster, in the *Mém. de l'Académie*, tom. XLVI. p. 458. (12mo Edit.)

any correspondent either in Zend or Sanskrit, but which may be perhaps allied to the Latin *juxta*. *Ayastá*, in the inscriptions, appears to imply "agency" or "conjunction," and to be used indifferently either before or after the noun¹. In the first paragraph of the third column at Behistun, *ayastá avam káram* is translated in the Median, as if the phrase had been *hadá avá kárd*, "with that force," and *káram ayastá*, in the seventh paragraph of the same column, has apparently a similar meaning. The other phrase in which the word occurs, *hawva ayastá 'uváip(a)shiyam akutá*, I shall consider hereafter.

Belát Tugh, of the Jaghatái Turkish. The name of *Arakadrish* is neither mentioned by classical authors, nor has it survived in the modern geography of Persia. I suppose it, however, to have belonged to one of the mountain chains on the eastern borders of *Kermán*, for we find in one passage of the inscriptions that it was in the country of *Pishiyá'wáddáyá'*¹, and we learn from another, col. III., para. 7, that a certain Persian rebel having retired to the latter country after a defeat, returned again to attack the Lieutenant of Darius in Persis Proper, and was a second time routed at *Parga*, which I identify with the modern *فجر*, *Fahraj*². There is perhaps an allusion to these Eastern Magi, distinct as I imagine from the Median tribe of Herodotus, in the famous passage of Pliny: "Ad Orientem Magi obtinent Pasagardas castellum in quo Cyri sepulchrum est, et horum Ecbatana oppidum, translatum ab Dario rege, ad montes³," their city of Ecbatana which was removed by Darius, either on his conquest of Smerdis or on the second Persian revolt under *Vahyazdata*, being in these very mountains of *Arakadrish*.

III EY <<II

ARAKH-A, [Col. III., l. 77, p. 238,] *Aracus*.

ARAKH-AM, [Col. III., l. 81, p. 238,] *Aracum*.

Arakha was the name of an Armenian rebel who threw Babylonia into revolt, pretending to be Nabochodrossor, the son of Nabonidus. He is exhibited at Behistun among the captive figures of the triumphal tablet. The etymology of the name is, I presume, to be sought in the Armenian language rather than the Sanskrit, and I venture therefore to compare it with *արքայ*, *arkai*, "a king⁴."

I consider it of some interest to find that a native of Armenia could personate a Babylonian prince, inasmuch as the fact affords presumptive evidence that there must have been a certain affinity

¹ I have sometimes surmised that in this name we have the vernacular orthography of the Greek *Πασιγάρδα*, but there are strong historical objections to the identification, which I shall state hereafter.

² *Fahraj* would be the Arabicized form of the Persian *Pahrag*. The name still attaches to a place between Shiraz and Kermán.

³ I conjecture this passage to be improperly pointed in the printed editions of Pliny. By placing a stop after *rege*, we may read,—“These Magi had a city named Ecbatana in the mountains, which was removed by King Darius.” See Pliny, l. VI., c. 26.

⁴ The Persian orthography of the name is reproduced with little variation in the Median and Babylonian transcripts.

between the races; but I dare not at the same time venture to affirm, that the connexion was so near as to render the Armenian language of any real assistance in interpreting the ancient Babylonian.

𐎠 𐎶 𐎶𐎶 𐎶𐎶 𐎶𐎶 𐎶𐎶 𐎠 ARTAKHSHATRÁ, [Ins. No. 19, passim, p. 341, 342,] *Artaxerxes*. Under this form we have the name which the Greeks, following a Babylonian model, rendered by 'Αραξέρξης, and which was stated by Herodotus to signify μέγας ἀρχίος¹. It is composed of two elements, *Arta*, which was certainly used in ancient Persian as a transcendental particle, but which in its origin should be compared, according to Burnouf, with the Zend 𐬀𐬵𐬀𐬵, *ərəta*, or 𐬀𐬵𐬀𐬵, *arəta*, a past participle derived from *ərə*, (Sans. 𑖅𑖀,) "to gain" or "acquire"; and *khshatrā*, which only differs from the Sanskrit 𑖕𑖕𑖀, and Zend 𐬵𐬀𐬵𐬀𐬵𐬀𐬵, *khshathra*, in the terminal elongation that is caused by the addition of an affix of agency. I shall examine the origin and application of the latter term at some length in another part of the Vocabulary, and will only observe, therefore, at present, that as the verbal root 𑖕𑖕𑖀, to which it is to be referred, signifies merely "to screen" or "defend," it may be applied with equal propriety to "a king" or to "a warrior."

The *Artakhshatrā* of Persepolis is certainly Artaxerxes Ochus, and I presume that the *Adakhehashcha* of the Venice Vase refers to the same monarch, for it seems impossible to believe so grievous a corruption of the true Persian orthography to have been admitted at any early period of the Achæmenian line; the different forms under which the name of Artaxerxes appears in the contemporary and subsequent languages of the East,

¹ Lib. VI., c. 98.

² Burnouf has some good remarks on the use and derivation of *ərəta* or *arta*, in his Commentary on the Yaçna, p. 474; Lassen, also, in his last Cuneiform Memoir, p. 162, compares with the same term, the title of 'Αρχίος, which Herodotus applies to the ancient Persian race, (lib. VII., c. 61); but which rather appears from Stephen and Hesychius to have been a particular epithet given in the vernacular dialect to the heroes of Persian romance. See these authors in voes, and compare also the explanation given by Hesychius of 'Αρχίος; μέγας καὶ λαμπρός.

haps be allied to the Sanskrit वृत्, Zend 𐬯𐬀𐬭𐬀, *vērēto*, and Pazend 𐬯𐬀𐬭𐬀, *vart*, the epithet being formed by the addition of the adjectival suffix in *ya* to the root वृत्, and signifying "celebrated". In the name of Phraortes, we have, however, a term which is more immediately connected with the Sanskrit वृत्, *vrit*, and if therefore it be considered necessary to distinguish *vartish* with the 𐬯𐬀𐬭𐬀 from *vardiya* with the 𐬯𐬀𐬭𐬀, we must refer the latter to the Sanskrit वह्, "to be pre-eminent," the Devanagari व being a regular correspondent for the Cuneiform sonant dental 𐬯𐬀𐬭𐬀, and the meaning of the entire name *Artavardiya*, which I suppose to be that of "very celebrated," being hardly affected by the change of etymology.

𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 ARDASTĀNA, [No. 10, p. 314.] *Artastonis*? In the notes to the window-inscription of the Palace of Darius I have examined this word at length, and I have added some explanations under the head of *áthagaina*¹. I am by no means satisfied that I have rightly interpreted the legend, but if *Ardastāna* be a proper name as I have before conjectured, the grammatical condition of the term must be necessarily that of the ablat. or genitive case sing. of a noun of the fifth class of the eighth declension. *Arda*, with which I compare the Zend *ērēdhwa*, is probably derived immediately from the Sanskrit वृध्, "to increase", and *stān*, (nom. *stá*, ablat. or genitive, *stāna* for

¹ For a comparison of the Sanskrit *vṛtta*, Zend *vērētō*, and Pazend *vart*, see Burnouf's *Yaçna*, p. 435, Note 290. The Sanskrit *vṛtta*, "selected," which orthographically answers to the Zend *vērētō*, cannot be compared with the Cuneiform *vardiya*, for in the latter term the dental is radical, and does not belong to a participial suffix.

² I once thought that we had in this name the title of Ἀρτουσάνη, the favourite queen of Darius, (see Herod. l. VII., c. 69,) but I have been compelled to abandon the idea, as the noun cannot be of the feminine gender.

³ See especially the note marked * under the head *Athagaina*.

⁴ Jacquet recognized the Zend *ērēdhwa* in the Ὀρθοκορυβαίης, "the high mountains" of Herodotus, (l. III., c. 92,) and he was probably right, for the district still retains the name of *Bálá Giritsh*, which has the same meaning. I believe also, that we have the Zend *ērēdhwa*, or Cuneiform *arda*, both in the name of *Ardastān* which attaches to the mountains west of Persepolis, and in *Ardabíl*, "the hills of the shepherds." In other Persian geographical names, such

śāstas) may be formed with the suffix in ॥ from the Sanskrit ॥, which gives the Cuneiform accusatives, *upastām* and *abishtām*, and from which we have the locative affix ستان in modern Persian. *Ardastā*, therefore, as a proper name would appear to have precisely the same signification as the عليجا, "high in place," of the modern language. Ultimately, no doubt, we shall obtain a certain explanation of the window legend of Persepolis from the Babylonian transcript, where the order of the words is inverted to suit a Semitic construction, but I cannot at present venture to draw any argument from that source.

𐎶 𐎶𐎵 𐎶𐎵 𐎶𐎵 𐎶𐎵 ARABÁYA, [Col. I., l. 15, p. 197, &c.,] *Arabia*. The name of the country of Arabia. Compare the Heb. ארבה, Arab. عرب, and Gr. 'Αραβία'. The termination, which is also found in the name of *Mudráya* for Egypt, is perhaps allied to the Sanskrit suffix in ॥, and has a simple power of attribution. In the inscriptions the name of Arabia is sometimes introduced between those of Babylon and Assyria, sometimes between Assyria and Egypt, and I think, therefore, we may suppose the title to apply to the Mesopotamian Desert and the basin of the Euphrates, which have always been inhabited by Arab tribes, rather than to the vast Southern Peninsula. The Jews, in the same way, whose geographical notions were very limited, designated as Arabia, or the country of the Arabs, the region immediately joining Palestine, and stretching southwards to the Red Sea².

as *Ardakán*, *Ardashir*, *Ardashat*, *Ardabád*, we have probably the old *Arta*, or Zend *arēta*, the change of the dental from the surd to the sonant grade being agreeable to the genius of the modern language.

¹ There is a very remarkable difference in the Median orthography of this name, as it is given in Westergaard's published copy of the Nakhsh-e-Rustam Inscription, and as I find it in Dittell's manuscript copy of the same writing, a difference which is of much importance in regard to the Median alphabet, but which I am unable at present to resolve. In the Babylonian transcript the name is unfortunately imperfect.

² For remarks on the name of Arabia, see *Ges. Lex.* in voce ארבה.

𐤀 𐤍 𐤍 𐤀 𐤍 𐤀 ARBIRÁ-YÁ, [Col. II., l. 90, p. 226,] *Arbelá*. We have, I believe, in the term *Arbird*, the name of the city which was written by the Greeks Ἀρβηλα, and which retains to the present day the title of 𐤀𐤍𐤁𐤏, *Arbil*. That it was a site of some consequence in antiquity, we may infer from the expression of Strabo, "κατοικίαν ἀξιόλογον", and from the testimony of Dio Cassius to its having been a place of royal sepulture under the Parthians¹, as well as from the imposing appearance which the great mound still presents; and the inference is confirmed by our finding that Darius after defeating the Sagartian rebel *Chitratakhma* on the confines probably of Media, sent him to that city to undergo capital punishment.

Whether the original name was written with the *r* or the *l* I cannot pretend to decide. The Median writing employs for the orthography of the last syllable a character which may be presumed to have the same power as the Persian 𐭮𐭲, but on the other hand we have, I think, in the 𐤀𐤍𐤁𐤏𐤀 of the book of Ezra, an instance of the name being written by the Semites in a very early age, almost as it is pronounced at present².

The term *Arbird* must be considered as a feminine noun of the 1st declension, and the locative *Arbirdáyá* must stand for *Arbirdyás*, the termination in *yás*, as I have suggested under the

¹ Lib. XVI., page 737. The Greeks had a tradition that Arbelá was founded by a certain Arbelus, one of the Athenian leaders who followed Medea into Asia. See tom. V., p. 160, Note 1, of the admirable translation of Strabo published by the French Academy. Under the lower empire the site was known as Ἀλεξανδρίανσι. See Bekker's Theophylact, p. 219.

² Dio Cass., l. LXXXVIII., c. 1; Curtius also, (l. V., c. 1.) mentions that Arbelá contained the royal treasures.

³ Chap. IV., v. 9. The initial 𐤍 substituted for 𐤍 in this title, I suppose to be the Chaldee demonstrative pronoun, or rather article, which is, I believe, to be frequently recognized in Assyrian and Babylonian names. Compare in Ptolemy, Ταρσάκη or Ταρσάκη, (mod. 𐤀𐤍𐤁𐤏 *Asak*); Διδούγωνα or Δίγωνα, mod. 𐤀𐤍𐤁𐤏 *Diklah*), &c., &c. Gesenius, in voce, does not venture to identify the Tarpelites; he merely compares the Ταρφαλαῖοι of the Septuagint; and it is certainly against the suggestion I have offered that the Syriac translation of the verse in Ezra employs the orthography of 𐤀𐤍𐤁𐤏, where the *l* is entirely lost.

head *Athuráyá*, being an older form than the *य* of the classical Sanskrit.

𐎠 𐎡 𐎢 𐎣 𐎤 𐎥

ARMIN-A, [Col. I., l. 15, p. 197,] *Armenia*.

ARMIN-AM, [Col. II., lines 30 and 32, p. 218, &c.,] *Armeniam*.

ARMIN-IYA, [Col. II., l. 29, p. 218, Col. IV., l. 29, p. 241,] *Armenius*.

ARMIN-AIYA (?), [Col. II., lines 59 and 63, p. 222,] *Armenia*.

ARMANIY-AIYA, [Col. II., l. 34, p. 218, l. 39, p. 219, l. 44, p. 220,] *Armenia*.

In the Cuneiform Armina we have the original of the Greek *Ἀρμενία*, and Arabic *أَرْمِينِيَا*. Bochart (Phaleg, l. i., c. 3, col. 20,) has shown that the Chaldæe Paraphrast renders the *מְרִינִי* of Jeremiah by *מְרִינִי*, and as the same country is named *Murvas* by Nicolaus Damascenus, he infers that the first syllable is the Semitic *מְרִי*, signifying "a mountain". That this term was actually in use not only in Pehlevi, (compare *Arparsin*, *Arburz*, &c.,) but also in Zend, I have observed under the head *Arakadriśh*; yet I hardly know how to account for the initial aspirate, which was retained in Zend, being dropt in the language of the inscriptions, except by supposing the names in which the word occurs, to have been adopted into the ancient Persian according to the popular pronunciation, and without any reference to their Semitic etymology¹.

The inflected forms of *Arminam* for the accus., and *Arminiya* for the ethnic title (the adjectival suffix in *iya*, for *i* or *ya*, being added immediately to the base) are perfectly regular, but there is

¹ Gesenius compares with the Heb. *גִּרְ* the Gr. *ῥος*, and Slavic *gora*; but if the latter term be admitted as of cognate origin, we must also include in the list the numerous correspondents which exist for the Sans. *गिरि* throughout the family of the Arian languages.

² I believe that the name of *Armeni* occurs repeatedly in the Medo-Assyrian Inscriptions of Van, which was actually within the limits of the ancient Armenia; and yet we have there what may be supposed to be the vernacular reading without the initial aspiration.

a difficulty with regard to the locative which I have cursorily observed in the notes to the second column at Behistun, but which will hardly admit of grammatical explanation. In the eleventh paragraph of that column, we appear in two passages to have the orthography of *Arminaiya*¹, the inflexion in *aiya* standing for the Sanskrit *ए*, and Zend *ا*, as the locative affix of the first declens. masculine; but in several other places the same case is certainly represented by *Armaniyaiya*, which must necessarily be referred to a nominative *Armaniya*; and on what principle the theme should thus follow the distinct forms of *Armina* and *Armaniya*, I am at a loss to conceive².

𐎠𐎡𐎢𐎣𐎤𐎥𐎦𐎧𐎨𐎩𐎪𐎫𐎬𐎭𐎮𐎯𐎰𐎱𐎲𐎳𐎴𐎵𐎶𐎷𐎸𐎹𐎺𐎻𐎼𐎽𐎾𐎿 ARSHÁDÁ, [Col. III., l. 71, p. 237,] *Arsada*.

The true orthography of this word may be perhaps *Arsháyá*, for it is impossible to distinguish on the rock whether the fifth character be 𐎶 or 𐎷. It was the name of a certain fortress in Arachosia, apparently on the extreme frontier, and I conjecture it to be the same place which is mentioned by Ptolemy under the form of *Ἀραδίκη*³, the *r* having been lost, according to the Pali system of simplifying compound groupings, and a locative suffix (Pehlevi or Scythic) having been substituted for the original ending. I have no clue whatever to the name in the modern geography of the province, and Ptolemy's position is not much to be depended on.

¹ In both passages it unfortunately happens that the termination is defective, and as I transcribed the paragraph from the rock in the Roman character, it is very possible I may have inadvertently written *mi* for *ma*.

² It would appear as if the Persians regarded the title as a noun in which the affixes in *ina* and *aiya* might be employed indifferently. The Median everywhere has the ending in *aiya*, but the double orthography is, I think, to be found

in the Medo-Assyrian, and the early Arabs wrote ^{أرمين} *Armin* as often as

^{أرمينية} *Arminiya*. The Greeks, it is well known, referred the name to the

Thessalian Arminius, one of the Argonauts, (Strab., p. 530,) while the natives of the country pretend to derive it from *Armenac*, one of their pristine kings.

³ Lib. VI., c. 20.

𐎠𐎼𐎡𐎹𐎠𐎡𐎹𐎠𐎡𐎹𐎠𐎡𐎹

ARSHÁM-A, [Col. I., line 4, 5, p. 196.] *Arsames*.

ARSHÁM-ANYÁ, [Col. I., lines 3 and 5, p. 195 and 196.] *Arsamis*.

ARSHÁM-A, [Ins. No. 19, l. 26, p. 342.] *Arsamis*.

The name of the grandfather of Darius, which was written by the Greeks 'Αρσάμης'. In the inscription of Artaxerxes Ochus, Hystaspes and Arsames are named as if they had been private individuals, but Darius himself would seem to claim the royal character for his entire line of ancestry up to the third generation above Achæmenes. Etymologically, *Arshâma* is probably a cognate title with 'Αρσης and 'Αρσάνης, with the أرش of Persian romance, and with the *Arshashang* of the Zend theogony²; and among the Armenians it continued in use as a royal name, as late as the Christian era³. It may be referred, I think, to the Sanskrit ऋषि, which has produced ऋषि, "a sage," and ऋषिय, "venerable," and it would appear also to form one of the elements of the Cuneiform *Khshayârshâ*. The true genitive is *Arshâmahyâ*, where the termination in *hyâ* answers to the Sanskrit स्य, and Zend ه, but in the degraded language of the time of Artaxerxes Ochus the inflexion had been lost, and we have accordingly the barbarous phrase *Arshâma nâma putîra*, for "the son of one named Arsames."

𐎠𐎼𐎡𐎹𐎠𐎡𐎹𐎠𐎡𐎹𐎠𐎡𐎹

ARIKA, [Col. I., l. 22, p. 199, l. 33, p. 200, and Col. IV., l. 38, p. 245, l. 63, p. 252.] *Hæreticus? Magicus?*

In each of the four passages at Behistun, in which this word

¹ See Herod. lib. VII., cap. 11 and 224.

² M. Burnouf, however, will not admit the *r* in *Arshashang* to be a radical letter; he believes it to be introduced before the hard sibilant, in many names in Zend, and in this name in particular, by a certain natural tendency of articulation, (see *Yaçna*, pp. 437 and 470); and the combined examples of *Ashaks* on the Eastern coins of Arsaces, (see Cunningham's *Plates*, No. 15) of *Aradâk*, the Parthian capital mentioned by Isidore of Charax, and of the Persian اشاک *Ashak*, are apparently in favour of his theory. The Median orthography of Arsames is also, I think, *Ashâma*, an aspirate almost always replacing the *r* in Median before a sibilant.

³ See St. Martin's *Armenia*, tom. I., p. 441.

occurs, it is certainly used in an evil sense; but it is quite impossible to determine with any precision the nature of the evil which it serves to indicate. Referring however to the distinction which is apparently drawn in the 14th paragraph of the first column at Behistun, between the sacrificial worship of the Magi proscribed by Darius, and the pure and primitive faith which he re-established in Persia¹, I am inclined to think that under the name *arika*, he alludes to the followers of the former heresy; and on this ground I compare the term with the Sanskrit अरि, which, although derived from अ, signifying merely "to praise," is used especially to denote a "*mantra*" or "magical invocation." The *Arika* of Darius it must be observed, were the particular objects of persecution. Their predominance in the state paved the way for the Magian revolution. Upon their extirpation depended, according to the address of the monarch to his posterity, the future integrity of the empire. That he was not one of them he numbers among the virtues which had secured to him the favour of Ormazd. All these indications point, as I think, to some prevailing heresy, of which Darius was the inveterate enemy; and when we remember that it was this monarch who instituted the feast of the *Mayoφώνα*, and who is still revered by the Zoroastrians as the reformer of the national religion, we cannot avoid connecting the *arika* with a proscribed Magism. As a further proof that the term denoted some peculiar sect, and was not used in the general sense of "an evil doer," or "one careless of religion" (the initial 𐎠 being the privative particle, and अरि being used, as in Sanskrit, in a good sense,) I may add, that the Median language adopted the exact Persian word, as if it had been a proper name, instead of employing a synonym².

The termination in *a* I suppose to be the attributive suffix added to the nominative अरि, in order to form an adjective.

¹ See above, under the head *Ayad(a)na*.

² I have the Median *arikka* in the translation of the thirteenth paragraph of the fourth column at Behistun. The term also occurs in the same evil sense in line twenty-four of the Median Inscription (H) on the outer wall at Persepolis, where however Westergaard (see his Copenhagen Memoir, p. 411,) has altogether mistaken the meaning.

𑀘 𑀓 𑀚 𑀭 ARIYA, [Ins. No. 6, l. 14, p. 292.] *Arius*. I have little to add to what Burnouf and Lassen have written on the origin and application of this name¹. Derived from the root 𑀘, and with the primary signification of "a man", it appears in the earliest ages to have been adopted as a proper name by the inhabitants of Central Asia. When the first colonists of this stock descended from Meru to the banks of the Sutlej, they gave the title of *A'rya vartta* to the country of their adoption², and on the subsequent introduction of caste, the same name, by a modification of the initial letter, served to distinguish the Brahmans (𑀘𑀓𑀭) from the agriculturists (𑀘𑀓𑀭). A kindred race migrated probably almost simultaneously from the same great nursery of nations to the westward; they were the progenitors of the Persians, (perhaps also of the Medes,) and came in contact, as I imagine, in their new abodes, with Scythic aborigines³. The traditions of their exodus and gradual colonization of Eastern Persia are preserved in the first Fargard of the Vendidad, where their primitive abode is named 𑀘𑀓𑀭 𑀘𑀓𑀭, *Airyanem vaējo*, "the source (or native land) of the Arians⁴."

In Persia, the title has been ever since retained as the true ethnic appellation; we have thus the *Airyō shayanēm* and *Airyō danghāvō* of the Zend Avesta⁵, the "Aria of Hellanicus" applied to Persia, the "Arioι of Herodotus" applied to the Medes. The

¹ See in particular Lassen's *Indische Alterthumskunde*, p. 25; Burnouf's *Yaçna*, p. 460, Note 325; and Wilson's *Ariana Antiqua*, p. 121.

² Compare the Persian 𑀘𑀓𑀭 or 𑀘𑀓𑀭, and I think also Gr. 𑀘, and Heb. 𑀘𑀓𑀭. The Lat. *vir*; Gr. *hērōs*; Scyth. *oldō*; Celt. *Fear*, *Gwō*, *Wr*, &c., are probably referable to another root, Sans. 𑀘𑀓𑀭, although Gesenius connects them. See Robinson's edition of the Heb. Lex., p. 50.

³ *A'rya-bhūmi* and *A'rya-desa* are also usual in Sanskrit in the same sense.

⁴ I suppose these wars to be figured in Greek fable by the conflict between Perseus and Cepheus. In Persian romance, *Feridūn* was probably the leader of the Arian immigration. The old Scythic speech is that I suspect of the Median tablets.

⁵ The Zend 𑀘𑀓𑀭 *vaējo*, answering to the Sans. 𑀘𑀓𑀭.

⁶ See the quotations in Burnouf's *Yaçna*, Notes, &c., p. lxi.

⁷ Frag. 166, Ed. Müller.

⁸ Lib. VII., c. 62.

earliest Greek author, I believe, who employs the name in its true catholic sense is Eudemus, a disciple of Aristotle, whose famous passage regarding the Magian religion commences with *Mávoi δὲ καὶ πᾶν τὸ Ἀπειὸν γένος*¹. Under the Parthians, who were probably a Scytho-Arian race, the title had lost something of its general application. It occurs under various forms in the writings of many of the Greek and Latin historians and geographers, but usually with a special reference either to a small district of Media, the Arabic *Arrán*², or to the countries intermediate between Persia and India³. Strabo alone appears to have had some idea of its full ethnographical import⁴. When the Sassanians, however, succeeded to power, they adopted in their inscriptions, on their coins, and in their edicts preserved by the historians of Armenia⁵, the well-known epithet of "Kings of *Airán* and *Anirán*," names which certainly referred to the *Arian* and *un-Arian* races, (for the words are written in Parthian, *Arián*, and *Andrián*,) and which as certainly produced the title of *Irán* ایران, by which Persia has been classically and familiarly designated ever since the Arab conquest⁶.

¹ Quoted by Nicol. Damasc., in *Libro περὶ Ἀρχῶν*; I follow the text as it is given in Hyde, p. 292.

² See Steph. de Urb., in voce *Ἀριάνη*; in my Mem. on Ecbatana I have also shown its application to the Median Capital. See Journ. Royal Geog. Soc., v. X., p. 139.

³ For the Eastern *Ariana*, see Plin., l. VI. c. 23; Dionys. Per., 8. 1098; *Ælian. de Animal.*, XVI., c. 16; Tac. *Annal.*, l. XI., c. 10, &c. We must be careful not to confound *Ariana* with *Ἀρια* or *Herat*, in Zend 𐬀𐬵𐬀𐬵𐬀, and in the inscriptions *Hariva*.

⁴ See throughout the second chapter of Strabo's fifteenth book.

⁵ For these notices, see De Sacy's *Mem. sur Div. Ant. de la Perse*, p. 48. St. Martin's *Armenia*, tom. I., p. 274, and Quatremère's *Hist. des Mongols*, tom. I., p. 241, Note 76.

⁶ The epenthetic *i* was introduced into the Sassanian *Airán* through the Zend, agreeably to a law of orthography which obtains in the latter language.

⁷ I take the Parthian *Arián* and *An-árián* from the bilingual inscription of Sapor, in the cave of *Hafábád*, which affords several other very valuable readings.

⁸ The names of ایران and عراق are undoubtedly identical, as has been shown by Müller, in his *Essai sur le Pehlevi*, *Jour. Asiat. Soc.*, tom. VII., p. 298. I think I discover the reason of the interchange of the Pehlevi terminations in *án* and *ák*, which is incontestable, in a certain guttural power inherent in the Babylonian nasal, both the one form and the other being referable to a primitive *ánk*. The name of *Irán*, however, must have been very early subjected to this corruption,

Zend *𐬀𐬭𐬀𐬎𐬌* *rāman*, "pleasure," both the one and the other being used as proper names¹. The derivation is from *𐬀𐬭𐬀*, "to sport," with a suffix of agency.

𐬀𐬭𐬀𐬎𐬌 𐬀𐬭𐬀𐬎𐬌 𐬀𐬭𐬀𐬎𐬌 𐬀𐬭𐬀𐬎𐬌 𐬀𐬭𐬀𐬎𐬌 𐬀𐬭𐬀𐬎𐬌 ARUVASTAM, [INSCR. No. 7, l. 4, p. 312.] The writing in which this word occurs at Nakhsh-i-Rustam is so deplorably mutilated, that it is quite impossible to obtain from it any connected sense, and I will not therefore offer any suggestion on the etymology of the term beyond observing, that as the Cuneiform *haruva* stands for *𐬀𐬭𐬀*, so *aruva* may with some confidence be referred to *𐬀𐬭𐬀* or *𐬀𐬭𐬀*, signifying "to go." The derivatives from this root in Zend and Sanskrit implying "strength," "rapidity," and "elevation," are numerous², but I do not find any compound of the exact form of *aruvastam*. The Cuneiform term appears to be a masculine noun in the accus. case.

𐬀𐬭𐬀𐬎𐬌 AVA. The remote demonstrative pronoun. As I consider the true demonstrative to be *ava*, formed with a suffix from the pronominal *a*³, I shall include under this head all the inflexions which occur in the inscriptions, notwithstanding that some of them are evidently foreign to the theme, and if alphabetically arranged should appear in another place. The following paradigm then presents all that we possess of the Cuneiform declension.

¹ For observations on the Zend *Rāman*, see the explanation of the name of *Rama khastra* in Burnouf's *Yaçna*, p. 219. See also De Sacy's *Mem. sur Div. Ant. de la Perse*, p. 210.

² Thus *𐬀𐬭𐬀* "a horse," in the Vedas; *Aurvat*, "swift," in Zend; "the mountain" *Arwand*; "the river" *Ṛṣat*, &c., &c. See Burnouf's *Yaçna*, p. 251.

³ Bopp supposes the suffix in *va*, which occurs in the Sans. *ava*, *eva*, *iva*, *sva*, &c., to be connected with the enclitic *𐬀𐬭𐬀* "as," (Comp. Gr. s. 361 and 363), and in accordance with his system of an original identity between pronouns and prepositions, he maintains the Sans. *𐬀𐬭𐬀*, "from," to be one and the same word with the Zend *𐬀𐬭𐬀*, *ava*, "this," (Comp. Gr. s. 377.)

It has been well observed that, "what we call personal pronouns are, or at least originally were, nothing more than demonstratives!" In the terms which represent the nominatives of the 1st and 2nd pers. the demonstrative etymology is not so immediately discernible; but in many languages the pronoun of the 3rd person is a word which may be also used indifferently to express "this" or "that." In this respect the Zend, the language of the inscriptions, and the modern Persian are entirely similar. Unprovided with a distinctive pronoun answering to the Sanskrit *तद्*, they employ the demonstrative *ava*, (Zend

¹ See an excellent philological article reviewing "Prichard on the Celtic Languages," in the Edinburgh Review, vol. LVII., No. CXII., p. 98.

𐬀𐬀𐬀, Pers. 𐬀) for "he" "she" "it"; but the Cuneiform is in so far superior to the others, that it has adopted a foreign term for the nom. sing. of the masc. and fem. gender, and that it also makes use of a suffix, which is subject to inflexion, and which is probably founded on an earlier demonstrative form, appropriated to the 3rd person. In a mere vocabulary I cannot pretend to follow out these relations with any thing like philological detail, but in noticing the various forms which occur in the inscriptions it may be useful to indicate their leading analogies.

Hauva. I have not yet been able to assure myself whether the etymology of this term is to be sought in the Sanskrit **सव**, or whether it was not immediately borrowed from the Semitic **אָוָה**. The probability, however, is, I think, in favour of the latter identification; for 1st, *Hauva* denotes equally the masc. and fem. like the **אָוָה** of the Pentateuch¹, whereas if we supposed the term to be compounded of **ח** and **אָוָה**, we ought to have *háuwa* for the nom. of the fem. gender; 2nd, although *hauva* is preserved in its full integrity, when as a fem. nom. it is united to a suffix, (compare *hauvamaiya*, "ea mihi," (Col. III., l. 11, p. 230); *hauvataiya*, "ea tibi," (Ins. No. 6, l. 57, p. 310); and *hauvachiya*, "ea-ce," (Ins. No. 4, line 23, 24, p. 282,) still as a masculine nom. it is in a similar position contracted into *hau*², (compare *haushaiya*, "is illi," (Ins. No. 3, l. 3, p. 273,) the final **𐬀𐬀𐬀** being thus apparently a euphonic developement and not a radical letter as in the Sanskrit **सः**; and, 3rd, if we followed a Sanskrit etymology, and read the term *hauva* with an

¹ For some valuable remarks on the Zend *ava*, see Burnouf's *Yagna*, Alphab. Zend, p. lxiii, and Note A, p. iii, of the *Notes et Eclaircissements*. Gesenius is wrong, I think, in comparing 𐬀) with the Heb. **אָוָה**. The Persian word, like the Cuneiform *ava*, and Zend **𐬀𐬀𐬀**, comes from the pronominal root *a*, and not from the demonstrative sibilant modified to an aspirate.

² See Robinson's Gesenius, in voce **אָוָה**, p. 270, where the double employment of the Hebrew pronoun is particularly noticed.

³ I cannot certainly affirm that the distinction between *hau* and *hauva* in composition is intended to mark a distinction of gender, for at Behistun, col. 2, l. 79, p. 226, we have the term *hauvamaiya*, "ille mihi," referring to a masc. antecedent; but still the example of *haushaiya* may be held to prove the terminal **𐬀𐬀𐬀** to be euphonic.

aspiration for the second Devanagari dental sibilant, we must suppose the final element to give an intensive signification, which is sufficiently apparent, where the Cuneiform $\langle \text{𐎧} \text{𐎶} \rangle$ stands for श , but which in no instance will suit the employment of $\langle \text{𐎧} \text{𐎶} \rangle$. An argument in favour of a Sanskrit etymology, is that *hagha* is employed in Pushtú¹, in exact analogy with the Cuneiform *hauva*, to express indifferently the personal pronoun and the demonstrative; but the coincidence in this case may be accidental, for I do not believe any connecting link is to be traced in Zend, or in a single other living dialect of the Persian family.

But while I thus compare the Cuneiform *hauva* immediately with the Hebrew הוּא , Syriac ܗܘܐ , and Arabic هو , I am not prepared to say that the initial aspirate may not be in its origin cognate with the Sanskrit ह ; and Gesenius notes a number of Teutonic forms of the 3rd person, *ho, hu, hue, hua, &c.*², which have a striking resemblance to the Semitic pronoun, but in which the aspirate must have sprung from ह , while in its primitive sibilant shape, and with its primitive demonstrative power equally applicable to relatives and to the 2nd and 3rd persons, the pronominal root *sa* is not only to be traced extensively in the Arian and Semitic languages, but it has even penetrated into the Scythian family³.

Hauva may be indifferently translated in the inscriptions by

¹ As in the terms '*uvamarshiyush*,' '*Uvakhshatara*,' and '*uváip(a)shayam*.'

² *Hagha*, indeed, must it would seem be derived from *sarva* through the Zend 𐎱𐎠𐎼𐎿 , *hakha*, a term which I do not remember to have met with in the Zend writings, but which may have very well existed in the language.

³ See Heb. Lex. (Eng. Edit.) p. 269, with the references to Fulda and Schmittheuner; the Greek σ is of course cognate.

⁴ Compare Semitic Heb. וְ , and Babylonian *sha* or *asha*, "who;" Arian, Sans. सः , सा , "he," "she," and the characteristic of the 2nd person in verbs; Goth. *sa, so*, "that;" Germ. *sie, so*; Eng. *she*; Arm. *sa*, "this;" Esthon. *sa*, "thou;" Gr. *su*; Irish, *so*, "that;" *se*, "he;" *sibh*, "you;" *stad*, "they," &c. and Scythic, Turk. *sen*, Finnish *sinä*, "thou," &c. Gesenius, in an excellent note to the Heb. וְ (Lex., Eng. Ed. p. 111), maintains the primitive demonstrative to be a dental, which passing through *th* becomes a sibilant.

"he," "she," or "that." I conceive its proper signification to be demonstrative, but that it was substituted for the personal pronoun¹ to fill up a blank in the language.

The neuter *ava*² which answers both to the nom. and accusative of the singular number, is sometimes also found in composition. We have thus *avataiya*, "id tibi," (Col. IV., l. 76, p. 254, and l. 79, p. 256); and *avashchiya*, "id-ce," (Ins. No. 15, l. 20, p. 330, and No. 17, l. 14, p. 337.) Under the head *Aniyashchiya*, I have endeavoured to explain the rule under which an aspirated sibilant is employed as a neuter characteristic before the indefinite particle. The introduction of the Cuneiform 𐎧 cannot be, I think, a mere euphonic artifice, or we should have had the orthography of *hauvashchiya* instead of *hauvachiya*. A terminal visarga must have originally existed as a neuter inflexion³,

¹ Since writing the above, I have found a complete explanation of the Cuneiform 𐎧𐎠𐎧𐎠𐎧 in Bopp's Comp. Gr. s. 347. The Sans. base *sa* should form, of course, according to rule, in the nom. sing. masc. *sas*, and we thus actually have the orthography of 𐎧 before a stop. The case sign *s*, however, (which is lost in the common 𐎧, to avoid, as Bopp says, s. 348, an iteration of the same element, is frequently vocalized to *u*, and 𐎧𐎠, therefore, which occurs before words commencing with *a* is a contraction of *sa+u* for *sas*. To this 𐎧𐎠 exactly answers the Zend 𐬵𐬀, *hó*, and I cannot doubt, therefore, that *hau* is the true orthography of the Cuneiform pronoun. The euphonic *va* has been added, as a word in the old Persian cannot terminate in *u*, and it has subsequently remained, (with the exception of the solitary example of *haushaiya*) as an integral portion of the pronoun. This does not explain, however, the employment of *hauva* for the feminine, instead of *há* for 𐎧𐎠 or 𐎧𐎠𐎧, nor does it impugn the connexion I have proposed to establish between the Arian and Semitic correspondents; on the contrary, the Zend *hó*, and Cuneiform *hau*, (or by extension *hauva*,) determinately, as I think, connect the Hebrew 𐤅𐤁, with the Sans. 𐎧, and prove the Semitic to be a secondary and later form, by showing that it owes its termination in *u* to the vocalization of a case-sign *s*, which is peculiar to the nominative of languages of the Arian family. The indifferent employment of *hauva*, moreover, for the masc. and fem. is a remarkable point of coincidence between the early Hebrew and the language of the inscriptions, and would appear to indicate that the Semites had adopted the term from the Persian branch of the Arian stock of languages.

² With *sas* compare the Greek *ai* in *ai-θi*, *ai-rós*, &c., and also the Slavonic *avo*.

³ Bopp observes in his Comp. Gr. s. 231, (Eng. Edit. p. 245,) that "Neuters have in Zend, as in the kindred European languages, a short *a* for their termi-

but, in preference to supposing the sibilant to be elided as the first member of a compound groupe in *tyamaiya*, *tyapatiya*, *avataiya*, &c., I now consider the *s* after *a* to have been lost, as a general rule, in all neuter forms, and to be solely dependent for its reproduction on the prosodial power of the indefinite suffix, which is in fact, the only enclitical particle in the language. *Āva*, as a neuter form, does not appear to exist in Zend; it is replaced by $\zeta\lambda\lambda$ *aom*, the pronoun following the declension of the Sanskrit *सदे*.

For the accus. masc. sing. the contraction of the Cuneiform *avam* into the Zend $\zeta\lambda\lambda$ *aom*, is perfectly regular; and the same may be said of the substitution of 𐎧𐎶𐎵𐎴𐎡𐎹 *avaḡhé* for *avahyá*, in the gen. masc. In the latter term, the elongation of the suffix is owing to the position of the *a* as a terminal, for where *avahya* occurs in composition, as in *avahyarádiya*, "eâ ratione," (Col. I., lines 6 and 7, p. 196, &c.) the 𐎶𐎵 is suppressed.

We have no example, I believe, of the nom. masc. plur. in the inscriptions, but it would undoubtedly present the same form of *avaiya*, which we find in the accusative. The Zend declension for these cases follows the adjectival rather than the pronominal form, and we have thus 𐎧𐎶𐎵 *avá*, instead of *avé*². Upon what principle the pronominal declension in the language of the inscriptions adopted the same form for the nom. and accus. masc. plur., I have not yet been able to ascertain³. Such, however, is

nation, perhaps the remains of the full *as*." The existence of this *s*, however, can, I believe, hardly be traced in Zend or Sanskrit, and the Cuneiform terms therefore, *avashohiya* and *aniyashohiya* are the more valuable. It is singular, however, that where the neuter *s* does occur in Sans. in *adas*, Bopp considers it to be a weakened form of *i*. See Comp. Gr., s. 350.

¹ *Avamsham*, which frequently occurs in the inscriptions, is the accus. masc. sing. of the demonstrative pronoun in composition with the genitive plural suffix of the 3rd person.

² The Zend *avá* (instead of *aváo*) however, for the nom. and accus. masc. plur. of the demonstrative pronoun requires explanation. According to Bopp, (see Comp. Gram., s. 239, and note to s. 231), they must be, I think, neuter forms substituted for the masculine. Burnouf (*Yagna, Notes, &c.*, p. ix.) engages to discuss them at some future time.

³ Bopp (Comp. Gram., note to s. 228,) observes, that "In Zend the pronominal form in *s* occurs for the most part in the accus. plur.;" but I do not find the reason of this marked disagreement with the Sanskrit.

undoubtedly the case, for we have not only two examples of *avaiya* in the accusative, but in composition we have also *imai* and *tyai* in the same grammatical condition.

The fem. plur. *avá* may be either of the nom. or accus. case, corresponding with a term which would be in Sanskrit *avás*, and in Zend *aváo*. It is formed with perfect regularity, but the neuter plural *avá*, which presents the same orthography, is not so easily disposed of. That the letter $\overline{\text{m}}$ represents the characteristic of the plur. neut. accus., (and I conclude of the nom. also) is certain, for although the employment of *avá* in the sixteenth and seventeenth paragraphs of the fourth column at Behistun, is not sufficiently defined to determine a grammatical rule, there is at any rate no doubt whatever attaching to the phrase *atara imá hamar(a)ná*, "in these battles." Now in Zend, the neuter plural characteristic is a short *a*, in Sanskrit it is *áni*, and with neither of these forms. therefore, can the Cuneiform $\overline{\text{m}}$ be immediately compared¹. In Zend, however, when a neuter plural form is attached to an enclitical particle, the *a* is lengthened (as in *vispá-cha*, "omniaque,") showing that the original characteristic was the same as in the language of the inscriptions; and perhaps also in the Vedic विष्वा *visva*, "omnia," we may recognize an identical inflexion, rather than a contraction of *visváni*². I have conjectured in a former place that the characteristic neuter sibilant, which certainly belonged to the singular, may also in the primitive state of the language of the inscriptions have been appended to the plural, *avá*, which in Zend is shortened to *ava*, being originally *avás*, but the verification of this obscure point must depend upon our meeting with the possible forms *avashchiya*, *imáshchiya*, &c., where neuter plurals may be attached to the indefinite particle.

The gen. masc. plur. *avaishám*, (Zend 𐎧𐎡𐎴𐎠𐎶𐎠𐎶𐎠𐎶𐎠𐎶 *avaeshám*, is independent of comment³, and it only remains therefore, that

¹ For an excellent examination of the plural neuter in Zend, see Bopp's *Comp. Gr.*, note to s. 231.

² Bopp, however, in the note to s. 234 of his *Comp. Gr.*, decides differently.

³ Bopp considers the pronominal ending in *sám*, (which becomes after an *i* *eshám*, and which in nouns is contracted to *ám*) to be the original, and formerly the universal form of the case-suffix of the gen. plur. of the Sanskrit; and he compares with it the Goth. *sé* or *so*; Germ. *ra*; Latin *rum*; and the Gr. endings in *ων* and *ων* for *ωνων* and *ωνων*. (See *Comp. Gr.* s. 248, and the foot-note to the same).

I should consider *abish*. In my notes to the passage where this term occurs, p. 212., I have conjectured that it may possibly be an erroneous orthography for *avabish*, the context appearing to require the signification of "illis," rather than "his." The emendation is, however, to say the least of it, somewhat hazardous, and if *abish* be the true reading, the term must be referred to the pronominal root *a*, which in Sanskrit, in Zend, and in the language of the inscriptions furnishes a number of inflexions for the immediate, but none for the remote demonstrative. I shall accordingly examine *abish* under the head *Iyam*.

I have now to make some observations on the suffixes of the 3rd person. These terms are of the most common employment in the inscriptions, and to a certain extent they have been preserved in the modern Persian, but they are entirely unknown to the Sanskrit, and in Zend and Prakrit, although they exist in the direct pronominal form, they have been lost as suffixes¹. The base upon which they are formed I consider to be the demonstrative *sa*, which, as I have before observed, is especially employed to represent the pronoun of the 3rd pers. The singular *shaiya* is altogether analogous to *maiya* and *taiya*, being formed from the said base with the suffix in *i*, which probably belongs to the locative, but which gives to the Sans. मे *mé*, ते *té*, &c., a genitive or dative signification; and the correspondent of the plural number, *sham*, which exhibits the genitive inflexion in शी or श्ये, has perhaps itself given rise to the pronominal termination for that case². From whence however the *i* has been derived in

¹ Compare Sanskrit *asya*, Vedic *ayá*, Zend and Cuneiform *aná*, or Sanskrit *asmat*, &c., &c.

² See Comp. Gr. ss. 55 and 341; से *sé*, in Prakrit, and هے *he*, هے *hai*, and شه *she*, in Zend, are of very frequent employment for the gen. and dat. of the 3rd pers. sing. in all genders. Bopp considers that where we have *shé*, *sháo*, &c., in Zend written with the ش, the aspiration must be caused by the influence of a preceding *i* or *u*; but in the old Persian the employment of the ش, which is perhaps the primitive form of the base, is certainly independent of all euphonic rules, and has been continued in the modern language.

³ See Bopp's Comp. Gr., s. 243. The German philologist was not aware of the existence of the suffix for the gen. plur. of the 3rd pers. or he would probably have compared it with the pronominal ending in शी *shám*.

the accusative masculines I cannot conceive. We meet with *shim* very frequently for the accus. masc. both of the singular and plural number, and in one instance, I think, also in the plural we have the orthography of *shish*¹. Now the *m* is the regular accus. suffix for the singular, and it may be supposed also to be allied to the plural *n*; or if Bopp be right in considering the true plural accus. ending to be *ns*², we may suppose that in the Cuneiform suffixes the nasal has been preserved in one form, and the sibilant, aspirated by the power of the *i*, in the other; but the origin and grammatical power of this *i*, in *shim* and *shish*, still remain altogether obscure to me³. I fear also that our means are insufficient for substantiating the existence of the neuter plur. accus. suffix in *dish* or *adish*. The only examples that occur are *tyādish*, (Col. I., l. 65,) and *niyādish*, (Col. IV., lines 73 and 78⁴); and the sense is in each passage too obscure to admit of our identifying with any precision the grammatical condition of the suffix. Under these circumstances, I will merely suggest, that in *dish* we have appended to the demonstrative base the Sanskrit neuter characteristic in *i*⁵, followed by the sibilant, which, although elided after *a*, certainly belongs in the language of the inscriptions to that gender in the singular, and which may be here retained in the plural in an aspirated form by its affinity for the preceding vowel⁶.

There can be no doubt but that the pronominal sibilant base which has produced the Cuneiform demonstrative suffixes, has

¹ Beh., Col. III., l. 52, p. 234.

² See Comp. Gr., ss. 236 and 239.

³ *Shim* and *shām* are certainly used for the fem. as well as the masc., but I do not think we have any example of the double employment of *shiya*; *shish* is a doubtful word.

⁴ See the notes to these passages in Chap. IV.

⁵ As in the regular plural ending in *ani*, where the *n* is simply euphonic. See Comp. Gr., sect. 234.

⁶ There is I find in Zend a pronoun of this exact form, 𐬔𐬀𐬌𐬌 *dis* or *dish*, which is supposed to be the instrum. plur. of *dī*, being contracted from 𐬔𐬀𐬌𐬌𐬀𐬌𐬀 *diblis*. I doubt if the Cuneiform 𐎶𐎶𐎶𐎶𐎶𐎶 can represent the instrumental case, but it may well be referred to the same demonstrative base *dī*, (connected according to Bopp with *ta*), which has produced in Zend *dish* or *dis* in the plur., and the accus. 𐬔𐬀𐬌𐬌 *dim*, "him," in the singular. See Comp. Gr. foot-note to s. 219, and the reference which is there given to Burnouf's Paper in the *Nouv. Journ. Asiatique*.

suffix (३) has left few traces of ३; were it not indeed for ३३ *ihā*, "here," and ३३ *sahā*, "with," which must have been originally *idhā* and *sadhā*, (the latter form actually occurring in the Vedas, and the Cuneiform correspondents being *idā* and *hadā*), we should hardly be able to recognize the true suffix of place. In Zend, however, the field of comparison is much more extensive; we have *hadhā*, *adhā*, *idhā*, and *tadhā*, and also 𐬨𐬀𐬭𐬀𐬭𐬀, the exact correspondent of the Cuneiform *avadd*¹; while in regard to the Greek, Bopp compares *évθα* and *évtaúθα*², and remarks that in the *évθα* of the latter word, we have a form positively identical with the Zend *avadhā*. Where *avadd* is employed in combination with a pronominal suffix, (compare *avadashim* and *avadashish*?) the elongation of the final vowel is not unfrequently suppressed, which brings the Cuneiform adverb into more close analogy with its correspondents in the kindred languages; but there is at the same time a very remarkable liability to inflexion appertaining to the word in the inscriptions, which will hardly, I think, admit of illustration from any foreign source. To express the sense "from there" or "from that place," we have the Cuneiform terms *hachā avadasha*, where an ablative inflexion is evidently appended to the locative suffix. The hypothesis of Bopp, founded upon Zend analogy, that the ablative sibilant of the Sanskrit is throughout a secondary form, resting on an exchange with a primitive *t*³, is not I believe generally admitted. At any rate we have the case-sign of *s* in the Cuneiform ablative *hachā Bābiraush*, "from Babylon;" and it must therefore be of considerable antiquity. But even supposing that the ablative inflexion appended to the locative suffix in *avadasha* be of kindred origin with the Sans. ablative *s*, I am still unable to explain upon what principle it can have undergone aspiration; or, indeed, to conjecture whether the primitive form of the inflexion may have been *shat*, *shas*, or *shan*. This question, then, I gladly leave to the consideration of better scholars⁴.

¹ See Burnouf's *Yaçna*, loc. cit.

² See Comp. Gram., (Eng. Ed.) p. 387, and also s. 420 of vol. II., p. 589.

³ See Comp. Gram., (Eng. Ed.) p. 202, in the note to s. 183.

⁴ Perhaps the termination in *ava-dasha* is after all nothing more than a modification of the Sans. ३३, with which is allied the Latin *tus* in *celltus*, and *tus* in *igitur*. At any rate the old Germ. *yá-dúshe*, "from whence," has the same abla-

from the root *jan*, "to strike, (Sans. हन्¹;) with the prefixed particle *ava*, (Sans. अव; and they have a grammatical value in showing that the language of the inscriptions coincided with the Sanskrit, in adding the personal endings in the second conjugation immediately to the root. The true form of the 3rd pers. sing. act. imperf. of हन् would be अहन् which is contracted to अहन्, as a terminal compound letter is inadmissible in Sanskrit. In the ancient Persian in the same way *jan* would produce *ajant*, which by the lapse of the nasal before a dental would become *aiat*, and by the elision of the final silent letter *aja*. *Ajanam*, as the 1st person sing. of the act. imp. answers exactly to अहन्, the *n* of the root being preserved when it no longer falls upon a dental. I may add, that *avája* and *avájaniyá* are for *ava + aja* and *ava + ajanam*, the temporal augment coalescing with the vowel of the particle, and becoming in consequence elongated. Where the root *jan* is used alone it signifies generally "to smite" or "defeat," as in Sanskrit. In composition with the particle *ava*, the meaning is restricted to "killing." For further remarks upon the verbal root, see under the head *Jan*.

the fourth letter being <𑀓>; and I translate it accordingly "in succession" or "imitation." Until the orthography, however, be definitively restored it is useless to examine it at any length.

𑀓 𑀓𑀓 <𑀓> 𑀓𑀓 𑀓𑀓

ASAGART-A, [Ins. No. 4, l. 15, p. 280,] *Sagartia*.

ASAGART-AM, [Col. IV., l. 23, p. 241,] *Sagartiam*.

ASAGART-AIYA, [Col. II., line 80, 81, p. 226,] *Sagartiā* (for *Sagartiā*).

ASAGART-IYA, [Col. IV., line 20, 21, p. 241,] *Sagarticus*.

The country of *Asagarta* appears in the inscriptions to have been situated between Media and Parthia, but to have been included within the political limits of the former province; I judge of its situation from observing that it heads the list of "Eastern" Satrapies, (of which the western boundaries must have been the Caspian Streights), the names of *Asagarta*, *Parthwa*, and *Zaraka* being given in succession, and evidently in geographical order; while its political dependence can be proved by the omission of the name in three out of four of the lists of the Satrapies; by the fact of the rebel *Chitratakhma*, who threw Sagartia into revolt, claiming to be of the Median family of Cyaxares; and particularly by the employment of an expression in the fifteenth paragraph of the second column at Behistun, "This is what was done by me in Media," in reference to the reduction of Sagartia, as well as to the defeat of the Median pretender Phraortes.

The name of *Asagarta* suggests many important considerations. M. Jacquet, (Journal Asiatique for October, 1838, p. 407,) by a somewhat forced etymology, translates the title by "the great river," and supposes the tribe accordingly to which it appertained to have dwelt on the banks of the Oxus. *Garta*, however, is probably the same territorial suffix which occurs in the Sanskrit विर्गटे, and the original ethnic form therefore will

¹ See Ins. No. 4, l. 15. I continue to read "*dahyāva tyā parauiya*," the Eastern provinces," *parauiya* being for पूर्य, the locat. sing. of पूर्य, "the East."

² Lassen (Pentapot., p. 32,) and Troyer (Raj. Tar., tom. I. p. 501,) are content to derive the affix in *Trigarta*, (which is still the family name of the Rājas of *Jalandhar*), from गार्त, "a cavern;" but such an etymology seems to be anything but satisfactory. I shall examine the term in detail, under the head *Var-danum*.

be *Asa*. Now without enquiring whether these *Asa* may have been connected with the *Aswas* (असवः) or *Asvi*, whose subsequent conquests were so renowned in history¹, it is at any rate worthy of remark, that the Scandinavian nations, whose Eastern origin is unquestionable, retained in their mythology the name of *Asgard*², and regarded the happy region³ which was thus designated with much the same veneration that the Hindus paid to the fabulous *Meru*, or the early Persians to *Airyanəm Vaējo*. It may be presumed then, I think, that the Scandinavian races either sprang from the country of *Asagarta*, or that the tribe of that name in its original emigration with the other Arian colonists to the westward, threw off a branch which first settled on the Euxine, and subsequently penetrated to the north of Europe⁴.

Of the Persian *Asagarta* or *Sagartii* our knowledge is very limited. By Herodotus, they are classed with the Sarangians, the Thamanians, the Utians, and the Mecians⁵, and the Satrapy thus composed would appear to have encircled the great salt desert of Persia to the eastward. They are in another passage described by the same author as a nation of Persian descent, speaking the Persian language, forming in their dress a connecting link between the Persians and Pactyans, and serving with the Persian cavalry in the army of Xerxes⁶. In Justin, also,

¹ The *Aswas*, of Indian romance, were one of the great divisions of the *Yadava* race. They are first known in classical history as the invaders of Bactria, (Strab. XI., p. 511), and may be subsequently traced for a long period in Chinese annals as the dominant race in Persian Khorasan. (See Foë Koué Ki, p. 83; Nouv. Mélanges Asiat., tom. I., p. 217; and De Guignes' foot-note to p. 51, tom. I., Part 2^{me} of the Hist. des Huns.)

² The first immigration of the Asi into the north of Europe is lost in antiquity, but Odin brought in the second colony from *Asgard*, about the Christian era. The subject has been thoroughly examined by Geijer, in his *Schwedens Urgeschichte*.

³ Odin was popularly believed to have brought the Asi from the Euxine.

⁴ Lib. III., c. 93; the *Σαγάρται* are of course the inhabitants of *Zarandj*, of whom more hereafter. In the *Θαράναι*, I recognize the tribe which gave its name to *دامغان* *Damaghán*, *دماوند* *Damawend*, &c. The *Οβρίοι* may, perhaps, be identified with the *Yuttyá* of the Inscriptions, and the *Míkoí* colonized *مکوران* *Mekrán*.

⁵ Lib. VII., c. 85; the Pactyans are a disputed race, but may, I think, be compared with the Zend *بادی* *Baghāhi*, which by common consent is identified with Bactria.

there is a remarkable notice of them. "The Parthians," he says, "were Scythian exiles, driven out of their country by domestic wars; they occupied the deserts between Hyrcania, the Dahi, the Arii, the *Sagartians*, and the Margians¹." Ptolemy further places them in Media to the north of Choromithrene, and in the eastern parts of the range of Zagros². From all this I infer, that forming a part of the Arian immigration which is figured in Persian romance as the conquest of *Feridun*, they established themselves particularly along the mountain range to the south of the Caspian, this in fact being the extreme western point which the colonists had reached at the time of the composition of the first *Fargard* of the *Vendidad*, and the locality being moreover especially connected with all those antique traditions which commemorated the advent of the race into Persia, and their suppression both of Scythian and of Semitic power. When the great mass of colonists moved to the South, and spread themselves over the plains of Persis, raising a native dynasty to the throne, which first acquired celebrity under its third member, Achæmenes, I further believe the Sagartians and Thamanians to have remained in their seats along the Caspian mountains; and although from their position, politically subservient to the Medes, and separated by the great salt desert from their brethren in Persis, to have still retained, at any rate as late as the age of Herodotus and probably much later, a close connexion with the true Perso-Arian stock³.

I shall have occasion to revert to this subject in the historical chapter, and will only therefore at present add, that we may probably trace an early position of the *Asa* in the *Asapuragan*, on the north-western skirts of Paropamisus⁴, while I have no doubt but that to the same race is to be attributed the very remark-

¹ Lib. XL^e, c. 1; in all editions of Justin that I have consulted, the name is written *Spartani*, but this must be an error for *Sagartani*.

² Lib. VI., c. 2; Ptolemy's Geography of Media is very loose; he appears to join Zagros, Orontes, Jasonium (*Damawand*), and Coronus in a continuous chain, and where he mentions Zagros in allusion to the *Sagartii*, I understand him to speak of that part of the range about the Caspian Gates. In his *Χορομήρη* I recognize *خوار Khâr*, although he names the same district in his account of Parthia, *Χορδάνη*.

³ The ethnography of Persia will be examined in detail hereafter.

⁴ In the old authors *اسپورگان*, now called *Shibbergân*.

vowel which is used to connect the termination with the theme, and in this view the Cuneiform examples are of interest¹. In the instrumental plural of themes in *a*, the old Persian always employs an epenthetic *i* before the case-ending, and we have thus *asbāraibish*, *martiyaibish*, *kamanaibish*, *Bagaibish*, *vith(a)ibish*, &c., but in the dative-ablatives *abish*, *vithabish*, and *ruchabish*, the supernumerary vowel is omitted; and that this difference is intended to mark a distinction of case, instead of being attributable to the respective endings of the theme in short *a*, and in a silent letter, is placed beyond dispute, I think, by the double form of *vith(a)ibish* and *vithabish*, proceeding from the same theme *vith*. I shall recur to this subject hereafter, and will merely therefore at present, compare the ending of *asbāraibish* with that of the Vedic अश्वेभिः *asvēbhīḥ*.

𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 AIVAM, [passim.] *Tum—et.* This term is used in the inscriptions as a relative and co-relative adverb, like the Latin *tum*. It is absolutely identical with the Sanskrit *एव*, supposed by Professor Bopp to be an accusative formed from the base *e* with a distinct pronoun *व*, which also occurs in *अव* *ava*, *एव* *eva*, *इव* *iva*, and which is connected with the enclitic *vat*, “as.” The Zend 𐬀𐬀𐬀𐬀 *atva*, “one,” where the euphonic *a* is prefixed by a peculiar principle of orthography, is of course a cognate term, but there is no exact correspondent in that language to the Cuneiform *aivam*. We may translate *aivam* in English by “as well—as,” or by “both—and.”

𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀

AURAMAZD-Á(H)A, [Passim,]

AURAMAZD-Á(H)Á, [Passim,]

AURAHYA MAZDÁ(H)A, [Ins. No. 17, l. 10, p. 337,]

AURAMAZDÁMAIYA, [Passim.] *Oromasdes mihi*.

AURAMAZDA { TAYA, [Col. IV., l. 58, p. 251,]
TAIYA, [Col. IV., l. 78, p. 256,] } *Oromasdes tibi*.

So much has been already written on the etymology and signification of the name of Ormazd^a, that I may dispense with any detailed examination of the subject. It is composed of two distinct elements, *Aura* and *Mazdá*, each of which throughout the Zend declension of the name is independently inflected, according to an expanded form of grammar that we see in the *Aurahya Mazdáha* of a late inscription of Xerxes^b. Professor Lassen has well remarked that, although असुर *asura*, in the later Sanskrit was always applied in an evil sense to the “demons” or “enemies of the gods,” still it is preserved in the Vedas as an epithet of *Brahma*^c, and I have the less hesitation therefore in

^a See Comp. Gram., s. 381, Eng. Edit., vol. II., p. 535.

^b See particularly Burnouf's *Yaçna*, pp. 70—80.

^c See the notes to Ins. No. 17, where I have drawn an inference of importance from this remarkable orthography.

^d Professor Lassen quotes the *Nairukta-Cabda-Sangraha*. See the *Zeitschrift*, p. 16.

adopting a suggestion of Burnouf which refers the term to *𐬨𐬀* *asa*, "life," with an affix of attribution, and translates it by "the living one." *Mazdā*, also, which is used in Zend as a proper name, as in *Mazda-yaçna*, *Mazda-dāta*, &c., is certainly composed of *maz*, "great," (Zend 𐬨𐬀𐬭𐬀; Sans. महत्) and a verbal suffix which may signify "giving," "creating," or "knowing," according as we compare it with 𐬨𐬀, 𐬨𐬀, or the Greek *δα*¹. Of this double epithet, then, "eternal," and (perhaps) "omniscient," was formed the proper name of the deity supposed to preside over the *Bhagas* or "gods" of the primitive Persian faith. It would be inconvenient in this place to discuss the question of the religious tenets of the Persians in the time of Darius Hystaspes, but I cannot avoid noting that there is no evidence whatever in the inscriptions of the principle of dualism having been acknowledged at the time of their execution, and that upon a single mutilated passage, moreover, (Col. IV., par. 4^a) depends the possibility of our recognizing even a Supreme Being, (*Zerwan* or "Time without bounds,") from which, according to the later Zoroastrian doctrines, *Ormazd* and *Ahrimān* had their common origin. From the usual tenor of the vows and thanksgivings of Darius, we should infer that a class of *Bhagas* or "superior intelligences" were alone supposed to exercise a divine influence upon worldly matters, and that *Ormazd*, as the chief of these *Bhagas*, was the object of special, if not exclusive, adoration². It is further particularly interesting to find that *Ormazd* is designated in the Median translation of a part of the Behistun Inscription,

¹ Burnouf prefers the latter derivation, and compares *δα* with the Pers. 𐬨𐬀𐬭𐬀 *dānā*, "wise," 𐬨𐬀𐬭𐬀𐬭𐬀 *dānistān*, "to know." He also shows that the Zend 𐬨𐬀𐬭𐬀 *dāo*, "knowledge," 𐬨𐬀𐬭𐬀𐬭𐬀 *dāmi*, "wise," the Sans. 𐬨𐬀𐬭𐬀 *dānu*, "a sage," and the Gr. *δα-γμ*, *δα-δά-σκα*, &c., are probably derivatives from the same root; *δα*, which, with the sense of "knowing," however, has been lost to the Sanskrit. See hereafter under the head *adānā*.

² There would appear from this passage to have been some distinct source, different from *Ormazd*, from whence "*les*" *davaus*, were supposed to have had their origin; but it can hardly have been the spirit of evil, for it was friendly to Darius. The name which commences with *Di* - - is unfortunately mutilated.

³ I may add, that to the early Greeks, Herodotus, Xenophon, &c., Persian *Zeus* was evidently unknown. *Ormazd* is the *Zoro*, or *Zoro*, *pyramet* of these authors, who was the prime object of worship.

as "the god of *Aríyanam*" or "of the Arians," in evident contradistinction to the deities of the Scyths and Semites'.

The Greeks, as it is well known, adopted various orthographies for the name, 'Ἀρομάης, 'Ἀρομάσθης, 'Ἀρομάτης, 'Ἀρμίσδας, 'Ἀρμισδάσθης, &c., &c. The Zend retained the primitive form of 𐬰𐬀𐬭𐬀𐬵𐬀𐬰 *Ahura Mazdao*, and the Parthian only differed in the aspiration of the final dental¹. In the lapidary Pehlevi the aspiration was displaced and the name was written 𐬰𐬀𐬭𐬀𐬵𐬀𐬰 *Auhramázdo*². In Pazend we have 𐬰𐬀𐬭𐬀𐬵𐬀𐬰 *Hurmazd*; in Persian 𐬰𐬀𐬭𐬀𐬵𐬀𐬰 *Ormazd*; in Moghol *Khurmuzda*; and in Armenian *Aramasd*. I must add, that in the 𐬰𐬀𐬭𐬀𐬵𐬀𐬰 *Anhuma* of the Pehlevi books, we have a very ancient term signifying "God", prefixed to the name, and that this prefix *An* or *Ana* was employed as early as the time of the Median and Babylonian translation of the Persian Inscriptions before the name of *Ormazd*.

Professor Lassen has been content to compare the term *Auramazda* with that limited but anomalous class of nouns in Sanskrit which are derived from monosyllabic roots in long *d*³, but he has certainly failed to show that any possible modification of the rules which affect the Sanskrit declension can sufficiently account for the Cuneiform genitive in *aha* or *ahá*, and to this subject, accordingly, I must devote a few observations. In Sanskrit, we must remember, that nouns in long *d* of the above class are declined analogously to those which end in consonants, but with this further peculiarity, that before the case-terminations which

¹ The name of Ormazd, does not, I believe, occur in any native Babylonian monument.

² I take the Parthian form 𐬰𐬀𐬭𐬀𐬵𐬀𐬰, from the inscription of Naksh-e-Rustam, copied by Flower, or Chardin, in 1667, when the writing was in a more perfect state of preservation than at the time of Niebuhr's visit.

³ See De Sacy's *Ant. de la Perse*, pp. 107 and 249. I cannot here enter into any detail on the Median and Babylonian alphabetical systems, but I will state that the letter 𐬰 in both languages is a nasal, perhaps approaching the Zend 𐬰 and that with the pronunciation of *an* or *āna*, it signifies "a God," being, in fact, the same as the Arab. الله *Allah*.

⁴ See the *Zeitschrift*, p. 511, and the reference which is there given to Colebrooke's *Gram.*, p. 40. Bopp, in his *Comp. Grammar*, hardly notices this declension, but refers to his *Gram. Crit.*, s. 130.

commence with vowels, (dat., ablat., gen., and locat.,) the long *a* is rejected, 𐬀 forming the nom. in 𐬀 for *dā-s*, and the gen. in 𐬀 for *dā-as*. In Zend, again, the long vowel of the theme appears not to have been rejected but shortened; and Burnouf thus explains the genitive 𐬀𐬀𐬀 *dāo* (in *Ahuráhē Mardāo*), which is expressed orthographically in the same manner as the nom. (in *Ahūra Mazdāo*) to be a contraction of *dā-as*¹. Assuming then a still more primitive and regular form of declension for the Cuneiform noun, we may believe that the long vowel was neither rejected nor shortened; but that it was preserved intact, and that the case-endings were added to it. The nom. *dā* and the accus. *dām* will thus stand for *dā-s* and *dā-m*, agreeing with the Sans. 𐬀 and 𐬀𐬀 ; and with the Zend 𐬀𐬀𐬀 *dāo*, and 𐬀𐬀𐬀𐬀 *dām*, while the genitive will require to be formed in *dā-a* for *dā-as*; but where the Cuneiform alphabet has no other means of dividing the short *a* from the vowel which precedes or follows it, and where such a division is absolutely necessary in order to make a grammatical distinction, it introduces a euphonic aspirate, *Dār(a)yava(h)ush* being thus written for *Dār(a)yavaush*, and in the same way *dā(h)a* in *Auramazdā(h)a* unquestionably standing for *dā-a*. I have been the more particular in explaining this employment of the Cuneiform 𐬀𐬀 , as it might otherwise have been mistaken for the true genitival sign, or in the absence of any examples of a Sanskrit gen. in *asa*, in might be conjectured to be a radical letter. I was once even inclined myself to believe that the root *dās*, “to know,” might have co-existed with *dā*, (दासुः “a sage,” being a derivative), and that *dā* and *dām* might have proceeded from the one root, and *dāha* (for *dāsas*) from the other; but the irregularity of supposing a noun to follow two different declensions, and the analogous example of *Dar(a)yava(h)ush*, has now convinced me that the 𐬀𐬀 is a mere

¹ Burnouf has carefully examined the respective formations of the Zend nom. and gen. in his *Comment sur le Yaçna*, p. 77.

² The *d* is preserved in these terms in Sanskrit, as the case-endings do not commence with vowels, but are the simple consonants *s* and *m*.

euphonic letter, and that it possesses no grammatical or etymological power whatever¹.

We have also the forms *Auramazdāmaiga*² and *Auramazdāiya*, (the latter being written faultily in one passage *Auramazdāiya*), where the suffixed pronouns of the 1st and 2nd persons are added to the nominative. In the one the elision of the sibilant, which is the nominative characteristic, before the *m*, is perfectly regular; but in the other, as the *s* should be orthographically retained between the *d* and a dental, we see a further proof that the sibilant (or its substituted aspirate) having been once rejected after *a*, as a case-ending, either masculine or neuter, is reproduced only before an enclitical particle.

𐎠𐎡𐎹𐎶𐎠 AURÁ, [Ins. No. 4, l. 24, p. 282,] *Vita? perennitas?* Relying on the possible explanation of *Aura*, which is given under the preceding head, and which supposes *asura*, applied to Brahma in the Vedas, to denote his attribute of "living for ever," unconnected either in sense or etymology with the *Asuras*, "or evil spirits," I am tempted to translate the abstract noun *Aurá* by "vitality" or "eternity." To arrive, however, at this meaning, we must suppose that the adjective *asura* having been formed by the addition of the attributive suffix in *ra* to *asu*, "life," an abstract sense has been obtained by the agglutination of a second suffix in *a*, the theme in long *á*, which has been thus elicited by the fusion of the suffixes, being a fem. noun of the first declension. In my notes to Ins. No. 4, I have brought forward other reasons in favour of this conjectural reading, but I do not pretend to consider it entitled to any exclusive preference.

𐎠𐎡𐎹𐎶𐎠𐎶𐎠𐎶𐎠 AUTIYÁRA, [Col. II., line 58, 59, p. 222,] *Otiara*. This would appear from the inscriptions to have been the name of a district of Armenia, conterminous with Assyria, and I am thus led to suspect that the *Tiyári* Kurds who

¹ The terminal elongation in *Auramazdāhá* is peculiar to Persepolis, and is evidently a corrupted form of the true case-ending. *Dá-as*, in fact, must have become *dá(h)a* before it could be lengthened to *dāhá*, for the principle of elongation depends upon the *a* being a terminal letter.

² Lassen supposes an anomalous dative in *Auramazdāiya*, but that term is certainly an error of the engraver for *Auramazdāmaiga*. It occurs in Ins. No. 6, l. 50, p. 293.

inhabit the mountains in that quarter may preserve a remnant of the title. I derive no assistance, however, from the ancient geographers in identifying the name.

॥ i.

॥ ॥ ॥ IDÁ, [Col. I., l. 29, p. 200, and Ins. No. 14, l. 24, p. 327,] *Hic*. Adverb of place, formed from the demonstrative base *i* with the suffix in *dá*. Compare the Sans. इह *iha*, Zend *idha*, Pali *idha*, &c., and see the remarks on this suffix of place given under the head *Avadā*. Where the Cuneiform ॥ or ॥*d*, answers to the Devanagari इ *h*, the Persian form may usually be considered more ancient than the Sanskrit. In the adverbial suffixes particularly, and in the termination of the 2nd pers. sing. of the imper., the Sanskrit aspirate is notoriously a modern degradation, and the Cuneiform dental must be held to represent the true primitive sound. In the present case we may assume, indeed, as almost certain that the Sanskrit इह was originally इष (as सह, "with," is written in the Vedas सष;) and with the ancient, of course, rather than the corrupted, form must the Cuneiform *idá*, therefore, be compared.

॥ ॥ ॥ IYAM. The immediate demonstrative pronoun signifying "this." It occurs in the Inscriptions in the following forms:—

SINGULAR.

	Masc.	Fem.	Neut.
Nom.	<i>Iyam</i> , (Detached Ins. l. 1, p. 261—264.)	<i>Iyam</i> , (Ins. No. 3, l. 6, p. 274.)	<i>Ima</i> , (Passim.)
Accus.	<i>Imam</i> , (Passim.)	<i>Imám</i> , (Passim.)	<i>Ima</i> , (Passim.)
Instrument.	} <i>And</i> ,	_____	_____
Ablat.		_____	_____
	Ins. No. 4, l. 8, p. 279.		
	Ins. No. 15, l. 14, p. 329.		
		<i>Ahydyá</i> , (Passim.)	_____

Bopp has thoroughly examined this suffix in his *Comp. Gr.*, vol. I., p. 388.

PLURAL.			
	Masc.	Fem.	Neut.
Nom.	<i>Imaiya</i> , (Col. IV., l. 34, p. 243 and 80, p. 257.)	<i>Imā</i> , (Passim.)	_____
Accus.	<i>Imaiya</i> , (Col. IV., l. 31, p. 243.)	<i>Imā</i> , (Passim.)	<i>Imā</i> , (Col. IV., l. 32, p. 243.)
Dat.	<i>Abish</i> , (Col. I., l. 86, p. 211.)	_____	_____

In the declension of this pronoun three demonstrative bases are employed, *a*, *i*, and the compound *ima*; the language of the inscriptions coinciding in this respect with the Zend and Sanskrit.

In the nom. masc., as we have in Sanskrit and Zend the base *a* joined to the suffix in *am*¹ (*a + am* = अयं, and 𐬀𐬎𐬎 *āem*), so in the old Persian and Pali we have *i + am* = *iyam*. I am not certain if *iyam* occurs in the masc. in the written Pali, but it very frequently represents this gender in the edicts of Asoka, and it is unquestionably the form from which the Persian' این *in* has been contracted.

In the nom. fem. the same base is employed in old Persian, Sanskrit, and Zend; compare *iyam* 𐬀𐬎𐬎, and 𐬀𐬎, the old Persian however being certainly a more ancient form than the Zend contraction.

In the neuter the Zend and Cuneiform agree in adopting the base *ima*; 𐬀𐬎𐬎𐬀 in the one, and *ima* in the other, being substituted for the Sanskrit *idam*. I rather suspect, however, that the Cuneiform *ima* in the neut. nom. and acc. sing. is for *imas* rather

&c., and he has shown the thematic identity of 𐬀𐬎𐬎, 𐬀𐬎𐬎 *idha*, and 𐬀𐬎 *tha*, in sect. 373 of the same work.

¹ *Am* is a general termination for pronouns; comp. *alam*, *īam*, *vayam*, *yāyam*, &c.

² Bopp observes, that the *a* base is often phonetically lengthened to *e* in Sans., as in *abhi*, *abhiya*, *abhiṣ*, and that *ayam*, therefore, may come immediately from *aiyam*. See Comp. Gr., s. 368, vol. II., p. 515.

than *imat*, as *ava* and *aniya* are for *avas* and *anayas*¹; (compare *avash-chiya* and *aniyash-chiya*.)

The accus. sing. corresponds in the three languages, being derived from the compound base *ima*. Compare masc. and fem. *imam*, *imdm*; इमं, इमां; 𐎢𐎠𐎢𐎡 *imēm*, 𐎢𐎠𐎢𐎡𐎠𐎢𐎡 *imām*; and in the neuter the difference only regards the characteristic of gender, the Sans. using *imāni* for *ima+ani*, the Zend *ima-t*, and the old Persian *ima*, probably for *ima-s*.

And occurs in the inscriptions in two passages; in one (*hadd and kdrā Pārsā*) it has unquestionably an instrumental signification; in the other, (*aniyashchiya and Pārsā*) it most probably represents an ablative. Now that the Cuneiform *nā* stands for the Sanskrit *smāt*² is proved beyond dispute by the phrase *hachā aniyandā*, where the Sans. would use अन्यस्मात्, and *and*, therefore, may be legitimately held as the equivalent of अस्मात् *asmāt*, from the demonstrative base *a*; but it so happens that *ana* is also itself used as a base in Zend and Sanskrit in the declension of this very pronoun *idam*, and that it is in both languages especially employed in the instrumental case; so that, if the language of the inscriptions possessed an independent instrumental and ablative, (as I am now almost persuaded was the case,) *and* might be supposed to perform a double part, representing the one case as the correspondent to अनेन and 𐎠𐎢𐎡𐎠𐎢𐎡³, and the other as the contraction of अस्मात् or 𐎠𐎢𐎡𐎠𐎢𐎡𐎠𐎢𐎡.

I have in several passages of the former chapters alluded to the possible identity of the instrumental and ablative in the old Persian, and I have chiefly founded this opinion on the double

¹ According to Bopp, however, as I have before remarked, the true neuter characteristic is *t*, and where the *s* is found in Sanskrit, as in *adas*, it is a weakening of the primitive dental; see Comp. Gr., s. 350.

² A question, however, arises, whether *nā* (for *nās*) be really a phonetic degradation of *smāt*, or whether the old Persian may not have used for the abl., the pronominal base *na*, (which occurs in the compound base *ana*, and in many inflexions) instead of the appended pronoun *sma*; see Comp. Gr., s. 372. I prefer at the same time the former explanation, for the *s* uniformly lapses before *n*, and the exchange of *n* for *s* pervades the entire structure of the modern language.

³ The *n* of the Sanskrit instrumental is euphonic, and did not exist either in Zend or in old Persian. The Zend *ana*, therefore, cannot be from the base *n*; it is from the compound *ana* (contracted to *an*), with the instrum. sign, short *n*. See Comp. Gr., s. 156.

signification of *and*; but if that term, really, as I think probable, represent two distinct grammatical forms, and the coincidence of orthography be accidental, the argument will have to be abandoned; and it will be then most reasonable to explain the Cuneiform 𐎶 ¹ as the true instrumental characteristic of the singular where it marks the one case², and as the contraction for *át* in the other. We have not in the Inscriptions, I believe, a single determinate plural ablative that can be submitted to comparison³; but as the dative of that number appears to be distinguished from the instrumental, and as in all the cognate languages the case-ending of the dative and ablative plural is the same, the inference of course is that there is a distinction also between the instrumental and the ablative.

In the Cuneiform fem. gen. *ahyáyá* or *ahiyáyá*⁴, we have, I think, a remarkable example of agglutination. The case in question is probably derived, like *and*, from the demonstrative base *a*, and in the masculine would thus present the form of *ahyá* for 𐎶𐎶𐎶 or 𐎶𐎶𐎶 *ahé*, the final *a* being elongated, as in all other regular genitive terminations. To mark a distinction of gender, then, the fem. suffix in *á*, for *ás*, appears to have been added to the masc. and the euphonic *y* to have been introduced as a mere connecting link, *ahyáyá*, being in fact, the agglutination of *a* + *hyá* + *y* + *ás*. I may add, that in the corresponding form in Sanskrit there is apparently the same double genitival suffix, (but without the connecting *y*.) अस्याः *asyás* being for *a* + *sya* + *as*⁵.

¹ We have numerous instances of the 𐎶 *á* answering equally to the abl. and instrum. of a theme in *a*. It is, indeed, one of the best defined case-endings of the language.

² See Comp. Gr., s. 158, where Professor Bopp has shown that the real and original case-ending is long *á*, and that the Sans. *n* is a mere euphonic epenthesis.

³ It is highly probable, however, that *rauohabish* is an ablative rather than a dative plural.

⁴ I consider the *i* in *ahiyáyá* to be irregular, and to be introduced for the mere purpose of euphony, before its cognate semi-vowel *y*.

⁵ Perhaps, as the dat., ablat., gen., and locat. of the fem. sing. of this and many other pronouns in Sans. partake in this employment of a suffix in *sya*, interposed between the base and the case-endings, it may be more correct to regard *asya* or *ahya* as a new compound theme derived from the masc. gen. but declined like a regular fem. noun in long *á*; the old Persian following the exact form of the nominat. declension, while the Sans. adds the case-endings immediately to the

In the plural the nom. and acc. are in all the three genders formed from the base *imā*, as in Zend and Sanskrit; but the case-endings exhibit some variety. That the termination in *iya* for *i*, (contracted with the *a* of the base into the diphthong *é* in Zend and Sanskrit) is common to the nom. and acc. plural in the old Persian I have already observed in treating of *avaiya*, and it need not surprise us therefore, that in the Cuneiform masc. we have *imaiya* equally for *إمه* and *إمان*. I believe, indeed, in Zend, that the termination in *é* is sometimes used indifferently in both cases¹.

The Cuneiform *imā* answers with perfect regularity to the nom. and acc. fem. *إما*: *imās*, in Sans.; *𐎠𐎢𐎡𐎴* *imdo*, in Zend; and the neuter *imā* which certainly occurs in the accus. (*atara imā hamar(a)nā*), and which may be assumed in the nom. has apparently the same ending which occurs in the Zend *vispācha*, "omnia-que," where the original quantity of the terminal vowel is reproduced before the enclitical particle². The Zend orthography, however, is opposed to the suggestion which I have offered in explaining *avā*, that the neuter sibilant of the singular may also have been retained in the plural; for if that were the case, we should expect to find *vispās-cha* in the accusative, as we actually have in another gender *vispes-cha*³.

The only other plural form that occurs in the inscriptions is

theme *asya*, without employing the connecting *y*. Bopp, relying on the evidence afforded by the fem. instrum. of the Zend, supposes the suffix in *asya* to be throughout a contraction of the fem. appended pronoun *smt*; but neither do the corresponding cases in Zend support this explanation, nor can it possibly account for the Cuneiform genitive *ahyāyā*. See particularly, Comp. Gr., ss. 171 and 172. The Zend correspondent is *𐎠𐎢𐎡𐎴* *aghāo*.

¹ The usual masc. accusat. plur. of this pronoun in Zend is *𐎠𐎢𐎡𐎴* *imā*, which is orthographically equivalent to *إمان*; but Bopp observes in the foot-note to s. 228 of Comp. Gr., that "In Zend, the pronominal form in *é* occurs for the most part in the accus. plur."

² See the notes of Bopp before quoted, to ss. 231 and 234, Comp. Gr., Eng. Edit., pp. 246 and 250.

³ *Vispescha* occurs in the Vend. Sad. p. 49, and is quoted by Bopp, in a note to s. 228 of the Comp. Gr. It appears to be the accus. masc. plur.; but if so, I do not understand from whence it has obtained the sibilant after the case-ending in *e*.

the masculine dative *abish*¹, and this is in so far, at any rate, a purer form than *ebhyas*, or *aeibyō*, that the demonstrative base *a* has been left intact, instead of being modified to *é*. With regard to the case-ending, I must add, that the only dative (or ablative?) plurals which exist in the inscriptions are, *abish*, *vithabish*, and *rauchabish*, and that I doubt therefore, if I have sufficient grounds for declaring positively the (dative-ablative) termination in *bish* or *abish*, to be distinguished from the instrumental in *ibish*, and for seeking to reconcile the former with *bhyas*. In this distinction, however, I am strongly inclined to believe, and I would even suggest, that *bish* (for *bis*, which is preserved entire in *no-bis*, *vo-bis*) is a purer and more ancient form than *bhyas*, the semi-vowel *y* being a development of a primitive *i*².

It only remains to notice the term *imaivd*, where the nom. and acc. plur. occurs in combination with the copulative conjunction, and where the case-ending *i* being no longer final retains its original form, instead of being lengthened into *iya*.

॥ २१ Ish; root, signifying "to come." I am not quite sure whether the Cuneiform root be *ish*, answering to *इश्*, or *aish*, the equivalent of *हृ*. It is of no great consequence, however, to distinguish the two forms, for they are no doubt of cognate origin, and with the primitive signification of "moving" they equally express in Sanskrit the idea of "going," as the corresponding root in old Persian in its pure state is indicative of "coming." From the immediate root *ish* or *aish*, we have in the inscriptions *aisha* or *aiasha*, answering indifferently to the 3rd pers. sing. and plural of the active imperfect of the first conjugation, (compare *देवन्* and *देवन्*), and with the initial *a* short or long, according as it may represent the mere temporal augment, or the augment in com-

¹ In the dative-ablatives *vithabish* and *rauchabish*, the themes end in silent consonants, and it is probable, therefore, that the true case-ending in the old Persian is *abish*, which coalescing with the base *a*, may give the reading of *abish* for the term in question.

² Professor Bopp remarks, that the instrum. termination has in Latin fixed itself in the dative and ablat., (Comp. Gr., s. 216.) and by deducing all the case-endings which commence with *bhy* *vy* from the preposition *बहिः* *abhi*, he admits a primitive *i*. Comp. Gr., s. 223.

bination with a radical letter. There is also in a single passage *aishtatá*¹, where, if the duplication of the 𐎠𐎶 be not an error of the engraver, we must see, I think, the 3rd pers. plur. middle imperf. of a root *isht* substituted for *ish*, as we have in Sans. the optional orthography of सम् and संत्, शस् and शंत्². I may observe, however, that *aishtatá* appears to signify "they had come," instead of simply "they came," and that it is just possible therefore there may have been a pluperfect tense in the language of the inscriptions, formed of the past participle and the personal-endings. The termination in *atá* for the Sans. *anta* is perfectly regular, and the elision of the personal-endings as silent terminals in *aisha* has also been sufficiently explained.

There are moreover various derivatives from this root which occur in the inscriptions, and which require to be briefly noticed. We have in the first place *fráish(a)yam*, "I sent," and *fráish(a)ya* (for *fráish(a)yat*³), "he sent," which are the 1st and 3rd persons of the act. imperf. of *ish* in the causal form, and preceded by *fra*, Sans. 𑖔 and Zend 𐬎𐬀𐬌𐬌. It is impossible to say in this case, whether the Cuneiform root be *ish* or *aish*, for the term *fráish(a)ya* being in the past tense, the Cuneiform 𐎠𐎶 may be as well produced by the coalition of the particle with the temporal augment, as by the fusion of three *a*'s in the particle, the augment, and the root. As the Sans. प्रेष्, "to send," however, is from इष्, and the Persian فرست *firist*⁴, alone retains the *i*, I prefer the former explanation. The suffix in *aya*, I consider to be the causal characteristic, as in the Sans. प्रेषयति, (which is given by Westergaard⁵), the literal meaning of the verb being

¹ Col. I., l. 85.

² See Westergaard's Radices, p. 314. I am the more inclined to believe that *isht* was used indifferently with *ish*, as the modern Persian retains the dental in the root فرست *firist*, "send," which is formed from the same root with the prefixed particle *fra*.

³ I place the *a* in these terms in a parenthesis, as I am not quite sure if the affix be *aya* for the causal form of the verb, or merely *ya*, the characteristic of the fourth conjugation.

⁴ *Fra* has been changed to *fir* by the operation of that law which is called the "harmony of the vowels," and which, although of Scythic origin, is to be traced extensively in the modern Persian.

⁵ See Radices, p. 278.

"to make to go;" but it may on the other hand be read *ya*, as the sign of the fourth class, according to which (although the compound *मेय* be of the first class) the root *इय* is in Sanskrit conjugated¹.

In the other compounds, *atiyāisha*, "he went beyond," which has been already explained, and *patiyāisha*, "they came to," (Col. I., l. 13), the root would certainly appear to be *aish* rather than *ish*, for *ati* and *pati*, (Sans. अति and प्रति) falling upon the imperfect *aisha* from *ish*, where the initial *a* as the mere temporal augment would be short, would form, I think, *atiyaisha* and *patiyaisha*, with an unexpressed short *a* appertaining to the Cuneiform *𐎶𐎠*. To account, indeed, for the introduction of the *𐎶𐎶𐎶*, we must suppose the verbal form to which the particles *ati* and *pati* are prefixed to be *disha*, and the elongation in that term could be alone caused by the fusion of the augment with the initial *a* of the root *aish*. It seems to me, therefore, most probable, that the two roots *ish* and *aish* were used indifferently in the old Persian, that they were exclusively of the first class, (the *aya* in *frāishaya* being the causal suffix²), and that, although in their pure state, they signified merely "to come," they were employed in composition to denote the opposite meaning of "going." I do not remember to have met with the roots in Zend, except in Anquetil's barbarous term *frēschttē*. (See Zend Av., tom. II., p. 450).

¹ It may, indeed, be opined, that the roots *ish* and *aish* are distinguished in the inscriptions, the former being of the fourth class, as in Sanskrit, and signifying exclusively "to go," and the latter being of the first class, as is also *esh* in Sanskrit, and having the opposite meaning of "coming." This explanation would answer sufficiently well in assigning *frāish(a)ya* to the former root, and *aisha*, *aishatā*, *patiyāisha* to the latter; but *atiyāisha* means, "he went beyond" instead of "he came beyond," and thus destroys the distinction.

² I may observe here, as a further reason for identifying *aya* as the causal suffix, that the characteristic of the fourth class is, I think, in the inscriptions uniformly *iya*. The disinclination, indeed, to admit compound groupes, seems to have led the old Persian to interpose the euphonic *i*, where in Sanskrit the suffix in *ya* would unite immediately with the root; while in the tenth class, and in causal forms where the suffix was *aya* with a prefixed vowel, such an artifice was unnecessary. I shall subsequently have occasion to give many examples of this distinction between the fourth and tenth conjugations.

𑀓 u and 'u.

𑀓 𑀓𑀓𑀓

UTÁ, [Passim,] *Et*.

UTÁ-MAIYA, [Passim,] *Et mihi*.

UTÁ-TAIYA, [Col. IV., l. 56, p. 250, l. 75, p. 254, &c.,] *Et tibi*.

UTÁ-SHAIYA, [Col. II., l. 74, p. 223, l. 89, p. 226, &c.,] *Et illi*.

UTÁ-SHAM, [Passim,] *Et illis*.

Utá occurs also both in Sans. and in Zend (उत and 𐬵𐬀), and it is no doubt etymologically allied to the Latin *et*. According to the system which derives adverbs, conjunctions, and sometimes even particles from pronominal bases, it is formed from *u* with the suffix in *tá*¹. The final 𑀓 has been originally produced by the old Persian law of elongating terminal vowels, and it frequently lapses accordingly before a suffix, as in the optional orthography of *utamaiya*. On the other hand, however, it generally happens that in this and similar formations, (compare *avadá*, "there," *avathá*, "thus," &c.) the elongation having been once given to the suffix becomes a part of the word, and is thus not subjected to elision; so that before *taiya*, *shaiya*, and *shám*, the orthography of *utá* is, I believe, constant throughout the inscriptions. I may add, that in col. iv, l. 79, at Behistun, we have the reading of *utátaya*, where the suffix of the 2nd person is contracted from *taiya* to *taya*.

𑀓 𑀓 𑀓𑀓𑀓 𑀓𑀓𑀓𑀓 𑀓 UDAPATATÁ, [Col. I., l. 36, p. 201, &c.]

Surrexit. We have here the 3rd pers. middle imperf. of a verb compounded of the particle उद्, "up," and the root पद् *pat*, "to go;" उत्पद्, being used in Sanskrit with precisely the same mean-

¹ Burnouf observes that the vowel *u*, which forms the Sans. *u-ta*, *u-pa*, the Zend *u-iti*, &c., is frequently found in the Vedas as a simple conjunction, in which state it may be presumed to have some analogy with the Semitic *u*. See Yaçna, sur l'Alph. Zend, p. lxiii, note 22. Gesenius has compared all the Semitic forms of the conjunction in his Lexicon, Eng. Edit., p. 288. I may add, that the same particle, used as a copulative conjunction, is of very frequent use in the Babylonian writing.

names of *Atrina* and *Upadarma* furnishes an inference of some weight, that as early as the institution of the Persian monarchy, Arian colonization had penetrated to that province. The name of *Upadarma* only occurs in the genitive case.

𐬰𐬀 𐬵𐬀 𐬵𐬀 𐬵𐬀 𐬵𐬀 UPARIYA, [Col. IV^c, l. 64, p. 252,] *Super*.
Preposition governing the accusative case and corresponding with the Sans. उपरि, Greek *ὑπερ*, Latin *super*¹, &c. It is however in the inscriptions, of uncertain application, as it only occurs in mutilated passages, which will not admit of interpretation.

𐬰𐬀 𐬵𐬀 𐬵𐬀 𐬵𐬀 𐬵𐬀 'UBARATAM, [Col. I., line 21, 22, p. 199,] *Onere oppressum?* A past participle in the accus. case sing. from the root *bar*, (answering to the Sans. भृ), preceded by the particle of excellence, which is सु in Sans.; 𐬵 in Zend; *ev* in Greek; and خوش, خوب, &c. in Persian, (comp. خورم, خوش, &c.) It must, however, be a mere matter of conjecture in what sense we are to understand the root in this compound, for it will signify, as the correspondent of भृ, "to bear a load," as well as "to cherish²." Under the head *Agatá*, I have examined at some length the passage in which the term occurs, and I will only observe, therefore, at present, that "heavily burthened," is perhaps the best translation for "*ubaratam*." (Comp. Sans. सुभर).

𐬰𐬀 𐬵𐬀 𐬵𐬀 𐬵𐬀 𐬵𐬀 'UFRASTAM, [Col. I., l. 22, p. 199, and Col. IV., l. 38, p. 245,] *Funditus deletum?* Under the head *Atifrashatádiya*, I have suggested the derivation of '*ufrastam*, from the particle '*u*, (Sans. सु,) and the root *par(a)s*, which occurs both in Zend and in the language of the inscriptions with the sig-

¹ In Zend we have 𐬵𐬀𐬵𐬀 *upara*; in old German *upar*; in Gothic *ufar*; in Eng. "over," &c. Burnouf considers the Sans. *upari* to be a locative. (See Yaçna, p. 284, and the reference there given, note 139, to Grimm's Deutsch. Gramm., tom. III., p. 259.)

² We have also the same particle in the Latin superlative "*optimus*."

³ I shall hereafter have occasion to examine in detail the root *bar*, in its proper alphabetical place.

nification of "destroying;" but on further consideration, I am quite at a loss to understand how *para* in the foot can be contracted into *fra* in the participle, for the principle of orthographical change proceeds in exactly a contrary direction. From a Sanskrit root, in fact, पृश् or पृस्, we might have the *guna* form of *parstam* or *parastam*, as we have पृस्त parsta, in Zend, and as in the inscriptions we have *kartam* from कृ; but the elision of a radical short vowel, which must take place in order to convert *paras* to *fras* appears to be altogether irregular. According to the general analogy of the Zend and Cuneiform orthography, *frastam* should be compounded of 𐎠 and a derivative from 𐎠𐎡, (compare Sans. प्रत्य); yet, on the other hand, the juxta-position and evident relationship of 'ubaratam abaram and 'ufrastam aparasam, would seem to shew that in each of these reiterative phrases, a common root must be employed for the participle and the præterite. Here, then, is a difficulty which I am quite incompetent to solve, and which I gladly leave to the consideration of better scholars, contenting myself for the present with indicating that the translation of 'ufrastam aparasam, "I have entirely destroyed," (lit. "well destroyed I have destroyed,") must be received with much suspicion.

𐎠𐎡 𐎠𐎡 𐎠𐎡 𐎠𐎡 𐎠𐎡 𐎠𐎡 𐎠𐎡 'UFRÁTAUVÁ, [Col. I., l. 92, p. 213,] *Euphrate*. We have here the name of the Euphrates in the locative sing., and we can affirm also from the orthography of the case-ending, that the old Persian noun was a feminine theme in *u*, the terminations in *auva* and *auvâ*, which are substituted for the Sans. औ¹ being clearly distinguished in the inscriptions to mark a difference of gender, (compare the masculines, *Bâbirauva* and *Margauva* with the fem. *dahyauvâ*.) I believe that no great respect is now paid to the rabbinical

¹ I shall examine the locat. case-endings of themes in *u*, under the heads *Dahyâush* and *Bâbirush*, and will here therefore only observe, that Bopp (Comp. Gr., s. 198,) considers the termination in औ to be a corruption of आस् *as*, the gen. being substituted for the loc., of which he determines the uniform characteristic to be *i*.

etymology of הוּא־פֶּרֶת, (the pronoun הוּא, and פֶּרֶת from פָּרָה, "to be fruitful,") but it seems to have escaped observation, that if we assign to the rivers of Mesopotamia the Arian derivative which their true orthography obviously presents, ('*Ufráta*, "the good and abounding (river)," from 'u, "good," fra, the particle of abundance, and an affix, perhaps of attribution), we must suppose an Arian to have preceded a Semitic colonization of *Shinár*. In the name of the Euphrates, the syllable *fra*, denoting "procession" or "abundance," was common to both families of languages¹, but we shall seek in vain for an explanation of 'u, Sans. सु, Zend ש, Gr. εϋ, in a Semitic source, and in the name of the "Tigris" also, a Sanskrit etymology will alone give the signification which the Greeks assign to the title. If then we are to suppose that the Mosaic orthographies of הוּא־פֶּרֶת and חֲדָקָל, were Semitic corruptions of true Arian compounds²,

¹ See the Dissertation of Morinus prefixed to Bochart's *Phaleg*, p. 25, and Buxtorf, in voce פֶּרֶת. Gesenius does not attempt to give any etymology for פֶּרֶת. See *Lex.*, Eng. Ed., p. 848.

² I thus cannot doubt but that we are to recognize the Sans. ॠ, Zend *fra*, &c., in a vast number of Semitic roots; compare פָּרַד, "to expound;" פָּרָה, "to be fruitful;" פָּרַח, "to flourish;" פָּרַשׁ, "to scatter," &c., &c.

³ The question at issue with regard to the etymology of the name of the Euphrates is, whether the prefix הוּא, which occurs in Gen. ii. v. 14, be really the pronoun of the 3rd pers. or a part of the proper name. All the translators undoubtedly of the Pentateuch, with the exception of the Septuagint, understood הוּא as the pronoun; in every other scriptural passage, also, the name is written simply פֶּרֶת, (see Gen. ii. 15, v. 18; Deut. i. 7; Jer. ii. 18, xiii. 4, &c., &c.) and from a very early period of the Christian era, the contracted form of *Forat* (Arab. فورات) has been certainly alone known in the country; yet, the coincidence of the Cuneiform 'Ufráta with the Gr. Εὐφράτης, renders it, I think, highly probable that in the expanded reading of הוּא־פֶּרֶת it was intended to express the true and vernacular name of the river, and that פֶּרֶת was a contraction of later times. Buxtorf and Morinus pretend that the Greeks obtained their name of Εὐφράτης from a misinterpretation of the Hebrew הוּא־פֶּרֶת, as if Herodotus and the historians of Alexander could have borrowed from the Septuagint; while Gesenius with something more of critique, suggested that Εὐφράτης

the received ideas regarding the primitive settlement of man will be much disturbed.

epithet was extensively applied in antiquity to valleys celebrated for their breed of horses, we may learn from comparing the *Χοάσπης* of Susiana, with the *Χοάσπης* or *Εἰασπία* of Ariana¹. 'Umartiya and 'uwaspá, "having brave inhabitants," and "producing good horses," are the distinguishing epithets of the favoured province of Persis, on the military prowess and resources of which arose the splendid fabric of Achæmenian empire.

𐎧𐎡𐎹𐎶 𐎧𐎡𐎹𐎶 𐎧𐎡𐎹𐎶

'UVAJ-A, [Col. I., l. 14, p. 197, &c.,] *Susiana*.

'UVAJ-AM, [Col. I., l. 82, p. 210, &c.,] *Susianam*.

UVAJ-AIYA, [Col. I., lines 74, 75, p. 209, &c.,] *Susianá*.

'UVAJ-IYÁ, [Col. I., line 75, 76, p. 209, &c.,] *Susiani*.

This is the vernacular Persian orthography of the name which was written by the Syrians *ܫܘܨ*, and by the later Persians *هوز*, or in the plural *اهواز*². The Pehlevi *Havuj*, which was preserved in the title *هېووجستان و اجار*, *Habujistán wájár*, (translated by the Arabs *سوق الاحواز*³) nearly followed the Cuneiform orthography, and there is perhaps an attempt to express the same pronunciation in the *Οὐαζ-αῖνη* and *Βιζ-άκος* of the Byzantines⁴. The assimilation of the many other names which appertained either to the province, or to its inhabitants, or to its capital city, is an obscure and unsatisfactory subject. As we find the Semitic sibilant to be replaced by the Arian guttural in several initial articulations⁵, and as a Semitic colony was certainly established in Susiana in the very earliest ages⁶, it is quite pos-

¹ For some interesting observations on the different forms of this name, see Lassen's *Bactrian Memoir*, in the *Journ. Asiat. Soc. Beng.*, vol. IX., part I., p. 472.

² The Arabs write indifferently *اهواز* and *احواز*, but *Howeizeh*, which is the mere diminutive of *Huz*, is always written with the guttural *ح*. I consider the light aspirate, nevertheless, to have been the primitive sound.

³ This form is preserved in the *Mujmil al Tawárikh*, in the account of the cities founded by *Ardeshir Bábegán*.

⁴ For these orthographies, see *Procop. de Bel. Gothico*, lib. IV., c. 10, and *Theo. Simocat.*, lib. III., c. 5.

⁵ This is particularly the case in the Arian orthography of the Babylonian names of *Nabukudraahara* and *Katapataka*.

⁶ Independently of the traditions of Memnon the Cushite, which are, however,

sible that the Heb. כּוּשׁ, Gr. Κουσσία, &c., may, originally have been the corruption כּוּשׁ, *ῥουσά*, and سوس; but I am by no means satisfied that either of these names can be compared with the Cuneiform 'Uvaj, for the guttural in خوزستان *Khúz-istán* is a modern development of the aspirate, and in the inscriptions the *Kushiya* (𐎧𐎶 𐎧𐎶 𐎧𐎶 𐎧𐎶 𐎧𐎶 𐎧𐎶, probably Κουσαῖσι) are clearly distinguished from the inhabitants of 'Uvaj. It might have been expected that we should derive assistance in illustrating the ancient Greek and Hebrew names of Susa and Susiana from comparing with the Persian title its Median and Babylonian correspondents; but this is unfortunately a subject involved at present in the most profound obscurity; for not only do the Scythic and Semitic orthographies exhibit a most astonishing variety, both positively and relatively¹, but I have not yet been able to assure myself of the identity of a single form with any acknowledged designation that is elsewhere applied to the country.

In a more advanced stage of the present inquiry, I shall examine this difficult, but interesting question in detail, and shall endeavour to ascertain the origin, application, and connexion of the different titles, but such a digression in this place would be inconvenient. I will only add, therefore, that I suspect the name of 'Uvaj, which may very possibly lurk in the Greek Οὐζιοί, and which became subsequently degraded to خوز *Khuz*, to have been imposed upon the country by the Arian colonists, who supplanted a Semitic race under the very earliest of the Achæmænian kings. The inflexions of 'Uvaj are valuable in proving the identity of the character 𐎧𐎶 and 𐎧𐎶, the former preceding

I think, of the very highest interest, I draw an inference of primitive Semitic settlement in Susiana from the Cuneiform inscriptions of Elymais and Susa, which present the most complicated form of writing yet known.

¹ There are three varieties of the Median name, which as far as pronunciation is concerned, it is almost impossible to reconcile with each other; and the Babylonian transcripts, also, have two distinct forms, of which the one may possibly correspond with the Persian 'Uvaj, but the other is certainly independent. I doubt if the Scriptural *Elam* is to be recognized under any variety of the Cuneiform orthography. The latter term, I imagine, was rather the name of a tribe which colonized various portions of Western Persia, and I may add, that the Elymæans of Northern Media, mentioned by Polybius and Ptolemy, retained this title until comparatively modern times.

all the case-endings which commence with *a*, (nom. *a* for *as*; accus. *am*; and loc. *aiya* for *a*) while the latter is used in the nom. plur. of the ethnic title (*'Uvajiyā*), where the subjectival suffix in *ya*, preceded by the euphonic *i*, is attached immediately to the base¹.

Chodedia. The name of a city of Persis, which must have been of some consequence, as it was selected for the place of execution of the great Persian rebel *Vahyazdāta*. I am however totally unable to identify it either in ancient or modern geography; and it would be a mere waste of time, therefore, to seek for its meaning or etymology.

𐎠𐎹𐎲𐎡𐎴𐎧𐎺𐎠𐎢𐎽𐎫𐎶𐎵𐎥𐎻𐎤𐎱𐎪𐎣𐎵𐎷𐎸𐎰𐎦𐎶𐎵𐎥𐎻 'Uvāmārshīyush,
[Col. I., l. 43, p. 201.] *Se impatientem habens.* I consider this to

be a verbal noun formed with the *unādi* affix in उ, the elements of the theme being 'ava, "self," the privative a, and मृष, "to bear" or "suffer," conjugated in the fourth class, and with the euphonic *i* interposed between the conjugational suffix and the root². The only irregularity, indeed, which this analysis presents to a Sanskrit formation, is the introduction of the characteristic of the fourth class between the root and the *unādi* affix, and of this peculiar construction we have another example in *Dar(a)-yavush*. The particle signifying "self" prevails under nearly similar forms in all the cognate languages, (comp. Sans. स्व; Zend 𐬵𐬀𐬯𐬭𐬀 *hva*; Gr. σφέ, &c.; Lat. *su-us*, &c.; Pers. خو in

¹ It is however sufficiently remarkable, that we have the term '*Uvajaiya*' with the , used for the sing. of the ethnic title, in col. 4, l. 10, at Behistun, the locat. being either irregularly substituted for the adjectival form, or as I think more probable, the  being an error of the engraver for .

³ मृच् in Sanskrit is conjugated in the first, fourth, and tenth classes, but the fourth is that which the root principally affects, (see Westergaard's Rad. Ling. Sans., p. 293). In the old Persian, I suppose the fourth to be distinguished from the tenth class by the respective forms of *iya* for the suffix in च्, and *aya* for that in मृच्.

am inclined to discover in the first element of the compound, स्व (or *swár* with the *a* elongated, as in स्वाराज,) "Heaven," and I would further suggest, that with this term, or with its cognate form स्वर्ग¹, we are to compare not only the true primitive orthography of 'Uvârazmiya, but the Γορυῶ of Procopius², and the still more corrupted name of جورجانية *Júrjáníyah*, which was applied by the Arabs to the capital of the province³. The affix of locality, however, which was added to *Swár* or *Hwár* to form 'Uvârazmiya, I am unable to identify. The early Arabs pronounced the name *Khuwârazam* (خوارزم), retaining the euphonic *u* of the Cuneiform between the hard aspirate and the *w*⁴, but the modern Persians, according to a system of contraction which is universal throughout the language, and which may be traced, I suspect, to the anomalous employment of the Zend character 𐬭𐬀, although they continue to write خوارزم, read the name with the shortened sound of *Khârizm*.

In the indifferent orthography of 'Uvârazmish and 'Uvârazmiya, we have an example of the uncertainty with which the old Persian language regarded a foreign theme in *i*, sometimes immediately attaching to it its proper case-endings, and at other times changing it to a noun of the first class by the addition of the euphonic *ya*. The Median language, also, in representing the name of *Khârizm* followed the same double orthography⁵.

¹ *Swarga*, through the Pehlevi, has also produced *Khang*, the famous گنگدز *Gangdiz* of Persian fable, which may have been in *Khârizm*, although more probably about *Khoten*.

² See *De Bello Persico*, lib. I., c. 3 and 4.

³ *Júrjáníyah* is of course Arabicized from *Gúrgáníyah*, and was perfectly distinct from the *Gurgán*, (*Vehrán* or Γερμανία) of the Caspian. The ruins of *Júrjáníyah* are still to be seen on a branch of the old Oxus.

⁴ See the passage in the *Hamasa*, quoted by Müller in the *Journ. Asiatique* for April, 1839, p. 302.

⁵ At Behistun, also, the *x* appears to be rejected in the Median orthography of the name, (as in the *Xopavrioi* of Ctesias,) although a sibilant is retained at Nakhsh-i-Rustam. The Babylonian form of the name at the latter place is unfortunately mutilated, but I think that it nearly reproduces the Persian pronunciation.

derived from the root तश्, "to carve," which is 𐎢𐎠𐎢𐎡 *tash* in Zend; but all this appears to me to be very doubtful. I am especially embarrassed with the form of the first sibilant; for if, as Lassen supposes¹, it were substituted for the dental (*us* for *ut*, before a word commencing with *t*;) or if *us* corresponded with خوش, we should, I think, have the form of 𐎢𐎠𐎢𐎡 , the *u* in such a position exercising its power of aspiration. I am obliged, therefore, to read *usatashanám*, and I know not whether the division be *usa-tashanám* or *'u-sata-shanám*. If the former be the correct reading, *usa* may be referred to the Zend 𐎢𐎠 *us*, "intelligence" or "skill," and *tashanám* may have the signification before assigned to it, the compound epithet meaning "skilfully executed;" but if we adopt the second division, *'u* will stand for सु, "well," *sata* will be the Sanskrit शत, "an hundred," and *shaná* will still have to be identified. I will only add, then, that the term is in the accus. case, and that as it agrees with the masc. pron. *imam*, the elongation of the last syllable is probably one of the grammatical errors with which the Inscription of Artaxerxes is throughout disfigured.

𐎢𐎠𐎢𐎡 = 'USHKA-HYÁ, [Ins. No. 4, l. 13, p. 280,] *Terræ firmæ* (*quasi terrestri*). The correspondents of the Cuneiform *'ushka*, are in Sans. शुष्क *sushka*; in Zend 𐎢𐎠𐎢𐎡 *hushka*; in Kurdish *hushk*; and in Pers. خشک *khushk*. Doubtless the Sanskrit root was originally written with the ष, (as we still find it in सुषि

¹ See Lassen's Memoir in the Zeitschrift, p. 165.

² I doubt much whether this orthographical law of the Zend can be applied to the language of the inscriptions. If however *Vishtāspa* be given as an example, the sibilant is at any rate shown to be aspirated.

³ This word in modern Persian is هوش *hush*, but it may exist in its old form in استاد *ustád*, "a master," with which I compare the name of *Osthanes*, as well as the Armenian title of *ustán* (Ստան), and perhaps the *Αστάνδαι* of Suidas. See St. Martin's Armenia, tom. I., p. 340, and the quotations in Brissón's de Reg. Pers. Princ., p. 190.

I should desire to find some meaning for it, like the Persian *دار* *dār*, *uzmayāpatiya akunavām* being equivalent to *بر دار کردم* *bar dār kardam*¹; for it certainly refers to some method of capital punishment, and “crucifixion” or “impalement,” was that to which political offenders among the early Persians were most usually condemned²; but I have searched in vain for any Zend or Sanskrit correspondent³. Inviting, therefore, further inquiry into the Cuneiform *uzmaya*, (which is, I think, the true orthography, as the sonant *z* appears to affect combination with the sonants rather than the surds, compare *A’uramazdā*, *azdā*, *’Uvārazmiya*, &c.), I content myself with retaining the purely conjectural reading of “I crucified,” for *uzmayāpatiya akunavan*.

Y k.

𐎶𐎠𐎧𐎺𐎡𐏁 𐎶𐎠𐎧𐎺𐎡𐏁 𐎶𐎠𐎧𐎺𐎡𐏁 𐎶𐎠𐎧𐎺𐎡𐏁 KATAPATUKA, [Col. I., l. 15, 16, p. 197,]

Cappadocia. The *Katapataka* or *Kαπαδοκία* of the inscriptions would appear to include all Asia Minor north of the Taurus, for there is no other country named between Armenia on the east, and the Grecian colonies to the west. Dr. Prichard has ably examined the orthography of ancient Cappadocia, and appears inclined to attach the nation to the Indo-Germanic family⁴. Its claim however to a Semitic brotherhood seems to me to rest on a surer foundation. The descent of the ancient kings of the Lydians, a neighbouring, and probably, therefore, a cognate race, from Argon, the son of Ninus, the son of Belus⁵, the fact that its inhabitants retained the name of *λευκοὶ Σύριοι* or "white

¹ *بر دار* *br dár* is literally, "upon the tree," but united with *kardan*, "to do," it is applied to "hanging," "impaling," or perhaps, "crucifying."

* See Herod., lib. VI., c. 30, and Lib. VII., c. 238.

* I can neither venture to compare *اەسماء* *aeśma*, Persian *هيسام* *hisam*, "wood," for the initial change would be too violent, nor, knowing also, as we do, the reverence with which the early Persians regarded the elements, the signification which would be obtained from *دەم*, "to burn," or *شاهان*: "fire;" (Pers.

سوز (SUS.)

⁴ *Researches, &c., &c.*, vol. III., p. 497.

^a Herod., l. I., c. 7.

Syrians," as late as the time of Strabo¹; and their worship of the Babylonian deities, *Anaitis* and *Omanus*, mentioned by the same author², furnish arguments which support each other; and to these arguments must be now added, the presumptive proof afforded by the inscriptions, of a Semitic origin for the name. In the Babylonian orthography of the name, indeed, the initial power is a sibilant; and that this must have been the true and not the corrupted form, I infer from finding a similar instance of transmutation in the name of *Nabokodrossor*, which was of course a pure Semitic compound³; while there is not, I believe, a single example of such a change in any title of undoubted Arian derivation. The Persians, in fact, I conceive to have been inclined to harden the Semitic sibilants, while the Babylonians rarely or ever softened the Arian gutturals; and as we have the two powers in the respective orthographies of Cappadocia, it follows that the Semitic form may be assumed without much chance of error, to be the primitive and vernacular title. At the same time, I am not prepared to offer any conjectural etymology for the Semitic *Satapatuka*⁴.

¹ Strabo, l. XVI., c. 737. Herod. in two passages, l. I. 72, and l. VII. 72, states expressly, that Syrian was the Greek, and Cappadocian the Persian name; and Dionys. v. 772; Apollonius, l. III., and Ptol. lib. V., c. 6, may be all quoted to prove the Assyrian descent of the Cappadocians. Pharnaces, however, who married Atossa, sister of Cambyses, the great-grandfather of Cyrus the Great, and who was the fifth ancestor of Anaplas, one of the seven conspirators, must have been, I think, of Arian descent. See Frag. of Diod. Sicul. in Phot. Biblio., p. 1158.

² Strabo, l. XV., p. 733; *Anaitis* is certainly a Babylonian name, commencing with *ana*, "a God;" and I take *Omanus* to be the same as the *Chomean Apollo* of Ammianus, lib. XXIII., c. 6, who was worshipped at *Humánia*, the *Xoúμava* of Ptol., l. V., c. 20.

³ It is true, that at Behistun the name of Nabokodrossor, is every where written with a sibilant in the Babylonian copies; but on all the pure Babylonian monuments I now find the guttural to be usually retained; and I am inclined, accordingly, to regard it as the primitive form. The interchanging, indeed, of the guttural and sibilant was probably admitted generally by the Babylonians, and the arguments, therefore, that the Semitic *Satapatuka* is an older form than the Arian *Katapataka*, must, I fear, be abandoned. The same interchange is still common in the dialects of India.

⁴ A curious etymologist, however, relying on the traditions which connect Armenia and Phrygia with the Flood, might find פְּלִיטָה, "a flood," in the name of *Satapatuka*.

agrees is masc.) I suppose it to be the ablat. suffix of the 1st pers. sing., which also occurs in *hacháma*, "from me," and *paruvama*, "before me," and which is here strangely enough appended to an adjective, the compound *kamanama*, signifying "desirous of me," or by a slight extension of the meaning "faithful to me¹." The instrumental plural *kamanaibish*, at any rate; which occurs in connexion with *asbáraibish* and *martiyaibish*, can only signify "faithful." *Kúma*, also, which is from the same root, is evidently identical with the Sans. कामम्, "agreeably to desire," but the particle is used in the inscriptions as a postposition governing the accus. case, *mám káma*, which is met with in two passages, meaning "according to my wish." I am not aware that there are any correspondents either in Zend or Persian.

𐎧𐎠𐎧𐎡𐎧𐎡𐎧𐎡𐎧𐎡 KARAKÁ, [Insc. No. 6, l. 30, p. 294,] *Carchii*.

In my observations on the Geographical list at Nakhsh-i-Rustam, I have attempted to apply this name to the Greeks, but on further consideration, I see much reason to doubt the identification². The concluding names of that list appear to be more reasonably explained as the great independent tribes who inhabited the interior of Persia³, and in this view I venture to assimilate the *Karaká* with the Καρχίοι, who, in conjunction with the Cossæans and Corbienæ, are placed by Polybius along the skirts of the mountains on the south-west frontier of Media⁴. Of the Carchians nothing positive, I believe, is known in history beyond the solitary notice of Polybius; but as they appear in the inscriptions to be associated with the Mardi (*Mádaiyá*?) it is very possible they may have given the name of Χάραξ to the Mardian

¹ Perhaps it would be more correct to consider *kaman* in the compound *kamanama* as a preposition, signifying "desirous of;" for the orthography of *paruvama* and *anuvama* shows the ablative affix of the 1st pers. to be *ama*, (not *ma*), and the coalition of such an affix with the nominat.* of an adjective should give the reading of *kamanáma* by the sandhi of the two short *a*'s.

² Lassen compares the Καλακινῆ of Assyria, or the Χαρακηνῆ of Susiana, but I see strong objections to either of these explanations; nor do I think Westergaard's application of the name either to the Colchians or Georgians, deserving of any serious notice. See Zeitschrift, &c., p. 97; and Westergaard's Mem., p. 305.

³ I thus read for *Tak(a)bará*, *Putiyá*, *Kushiya*, *Mádaiyá*, and *Karaká*, the Tiberenes, the Vitii, Cossæans, Mardi, and Carchians.

⁴ Polyb., l. V. c. 5; the Corbienæ may be compared with the Corbiane of Strabo, and Mt. Charban of Pliny.

settlement, established by the Arsacide Phraates, near the Caspian Straights¹. With less hesitation also, I connect their names with that of the city of كرج *Karaj*², which was near their original seat, and the title of which is still preserved in the *Kereh rúd رود كره* of central Irák.

𐎧𐎠𐎡𐎹

KART-A, [Insc. No. 10, p. 314,] *Factus*.

KART-AM, [Passim,] *Factum*.

KART-Á, [Insc. No. 19. l. 31 and 35, p. 342,] *Factor*.

KARIYISH (?) - - - - , [Insc. No. 7, l. 9, p. 312,] — ?

KÁR-A, [Passim,] *Copias—regnum*.

KÁRAM, [Passim,] *Copias—regnum*.

KÁRÁ, [Passim,] *Copis—regno*.

KÁRAHYÁ, [Passim,] *Copiarum—regni*.

KÁRASHIM, [Col. I., l. 50, p. 204,] *Regnum illum*.

I derive all these from the root signifying “to do,” which is

𐎧 in Sans., 𐎧𐎠𐎡 *kěř* in Zend, and کر *kar* in Persian³. *Karta* and *kartam* are, it appears to me, the masc. and neut. forms of the past participle, (comp. कर्तः and 𐎧𐎠𐎡𐎹 *kěřētēm*), but it is possible that the latter term may be sometimes used as a neuter noun, like the Gr. *ἔργον*, and Latin *factum*⁴. *Kartá*, also, must

¹ See the Parthian stations of Isidore, p. 6. *Xápaξ* would seem to be *Damáwend*, but it may be *Karrej*, on the *Karrej rúd*, near Teheran.

² *Karaj* was re-established by the famous *Abu Dalaf*, in the tenth century, and was of sufficient consequence to be formed into a Christian Bishopric. See the tables of Elias Damas. in Assemanus, tom. II., p. 463. The ruins of *Karaj* are still to be seen on the *Kereh rúd*, near *Sultánábád*; *Kerkha*, on the Choaspes, together with *Xápaξ Πασίβου*, or كرخ میسان and the numerous *Karkhs*, on or about the Tigris, I suppose to represent one and all the simple Chaldee ܟܪܬܐ,

“a fort,” or “city;” Syriac ܟܪܬܐ.

³ I shall examine under the head *Ku*, the remarkable circumstance of that root taking the place of *Kri* throughout the simple verbal conjugation, and shall give my reasons for disbelieving in the identity of the roots, which is, however, stated by Lassen as an established fact.

⁴ It is extraordinary that Lassen should persist in translating *karta* and *kartam*, “a palace,” and still more surprising that Westergaard should approve of the reading, remarking, as he has done, that the Median translations employ the same root for *kartam* and *akunaush*. See his Median Memoir, p. 354.

rogative base *ka* and the indefinite suffix¹. The exact Sanskrit correspondent is कश्चिन्, and if the compound occurred in Zend, of which I am doubtful, it would be written 𐬕𐬀𐬭𐬀𐬎𐬭𐬀, as we have the analogous form of 𐬕𐬀𐬭𐬀𐬎𐬭𐬀 *kaçcha*. With regard to the varying orthography of *kash* and *ká*, we must remember that the language of the inscriptions would properly represent the Sans. masc. nom. कः by *ka*, but that before the enclitical particle *chiya* (for *chit*), the sibilant case-ending 𐬀𐬭𐬀 would re-appear; while on the other hand, the brevity of the simple form *ka* would probably cause its final vowel to be elongated, as in *vá* and *chá*, for 𐬀𐬭𐬀 and 𐬀𐬭𐬀. In Sanskrit, as Professor Bopp has observed, the addition of चिन् removes from the interrogative expression preceding it its interrogative force²; and this will exactly explain the sense of "any one," which appertains to the Cuneiform *kashchiya*. In regard to *ká*, however, which has the same indefinite sense, I must add that the Sanskrit pronoun did not necessarily imply an interrogative, but that according to the fifth meaning of Wilson, it also denoted "kind" or "sort," and that this is certainly the application of the term in the inscriptions; for *tuvam ká hya aparam ahyá* can only be translated "thou *whosoever* who mayst be herafter." We cannot exactly compare the Latin "quisque" with *kashchiya*, for "*quis*," answers to the nom. *chish* or *kis*, and is derived from another interrogative case *ki*; but the indefinite suffix "*que*," which occurs in *quisque*, *uterque*, &c., and which is probably cognate with *ce* in *hic-ce*, *is-ce*, &c., is no doubt identical with *chiya*, a term that I shall further examine in considering the masc. nom. *chish*. M. Burnouf has devoted six pages of elaborate commentary to the explanation of the Zend *kaç*³, (where the final letter is written in different passages of the Zend Avesta,

¹ Bopp has some excellent remarks on the interrogative bases generally, and on this pronoun in particular, in his *Comp. Gr.*, ss. 390 and 398; he considers *chit*, which is common to the Zend and Sanskrit, to be a neuter form altered from *kit*, which again comes from the base *ki*.

² I mention this, as the final elongation, which is common in verbs, adverbs, &c., does not occur generally in the nom. masc. of nouns or pronouns, where it stands for 𐬀𐬭𐬀.

³ See *Comp. Gram.*, Eng. Ed., vol. II., p. 561.

⁴ See Yaçna, note R, from p. 133 to p. 139.

ۛ, ڄ, and ڙ; ٺ, ڙ, and ڻ); but he has omitted to compare the term with the Persian کَسی *kasé*, "a certain person," with which however it appears to be identical, and in which the final vowel is certainly an affix of individuality, *kasé* being exactly equivalent to *yek kas*.

$\text{𐎧} \text{𐎠$ 𐎡 𐎢 𐎣 𐎤 𐎥 𐎦 𐎨 KĀPISHKĀNISH, [Col. III., l. 59, 60, p. 235.] *Capiscanis*. The name of a fort in Arachosia, where the Satrap of the province repulsed the invasion of a rebel force from Persis. I am much inclined to believe that the affixes in *án* and *kán*, which under a multitude of forms appear in so very many of the Greek orthographies of old Arian geographical titles, are in reality plural characteristics attached to the proper name of the tribe inhabiting the spot; and although we cannot trace such plural forms in any known ancient languages connected with Persia¹, except the Chaldee and Pehlevi, both of the Semitic family, I still suppose them to be of the remotest antiquity, borrowed, perhaps, from races which long preceded the settlement of Arian nations westward of the *Belút Tāgh*.

Without pursuing further than at present so obscure a subject, I will merely suggest that in the term *Kápushkánish*, we may have this plural termination appended to the proper name *Kápush*, the ethnic title being afterwards converted to a geographical designation by the addition of an affix of locality. This conjecture indeed derives, I think, some support from our finding the *Kapishes*, or "brown men," (from कपिशः, "brown," the sibilant being aspirated before the *k*) settled in other parts of Ariana, as well as upon the western frontier, where we must suppose to

¹ Bopp, indeed, (Comp. Gr., s. 240) remarks, that the plural termination in *án* of the modern Persian for animate creatures, is certainly adopted from the Sans. accus. plur. in *ज्ञान्*, in the same way as the Spanish employs the Latin accus. for the affix of the plural number; but it would be more correct, I think, to say that the accus. case-ending of the Sans. in *án* is a relic of the true and universal plural affix, of which, indeed, we have also, perhaps, another trace in the gen. case-ending in *ánám*, although Bopp determines the *n* in that suffix to be euphonic. Müller, also, (Essai sur le Pehl., p. 300,) has explained the guttural in the Persian plural ending in گان *gán*, as the reproduction of the old sing. suffix of the Pehlevi in *k, q*.

have been situated the *Kápisshkánish* of the inscriptions. I allude of course to the famous *Capissa* in *Capissene*, under the Indian Caucasus, which existed as early as the time of Cyrus, for the city was destroyed in that monarch's Scythic expedition; which as the *Kiapishe* of the Chinese rose again into so much celebrity about the fifth century of Christ, and the ruins of which are to be seen at the present day, still retaining the name of *Kafshán*, in the *Ghúrband* Pass, about fifty miles north of Kábul¹.

I conclude that the *Kápisshkánish* of the inscriptions must have been in the direction of Seistan, as the Satrap of Arachosia would probably have met the force advancing from Persis on the frontier of his province, but in that quarter modern geography affords no clue to its identification.

𐬕𐬀𐬎𐬌 KAUF, [Col. I., l. 37, p. 201,] *Mons.* I am not aware that there is any correspondent for this term in Zend or Sanskrit; but it occurs frequently both in Pehlevi and Parsi, (compare *وال* in the one, and *كوپ* in the other,) and in modern Persian it still exists under the slightly altered form of *كوه* *koh*. It was probably borrowed by the Persians with many other vocables from a Scythic source, for cognate forms are still extensively used in the dialects of that family, as in the Hungarian *koe* and *köv*, the Finnish *ku*, and perhaps even the Turkish *kaya*, "a stone." That the radical vowel was in the Persian term affected with the *guna* may be inferred, as well from the form of the guttural 𐬕𐬀𐬎𐬌, which cannot coalesce immediately with the *u*, as from the employment of the *ω* in the Greek correspondents, which represents the diphthong more regularly than the primitive vowel. Compare the *Κωφης* and *Κωφῆνη* of Eastern Ariana, the latter of which has the equivalent name of *Kohistán* to the present day², and also *Κωφῆν*, the ancient capital

¹ Without pressing conjecture too far, I may also, perhaps, suppose "the brown" men of *Capissa* to have been especially distinguished from the neighbouring "white horde," who dwelt in *Ὀπροσπάνα*, the *Sepito-falasse* of the Chinese. Lassen, who in his *Bactrian Memoir*, has compared *Capissa* with the Chinese *Kiapishe*, does not appear to have been aware of the existence of the ruins of *Kafshán*, at the foot of the Pass of the same name, leading from the *Ghurband* valley over the *Hindú Kush*. See *Jour. As. Soc. Beng.*, vol. IX., part I., p. 484.

² Lassen's *Bactrian Memoir*, translated in the *Journal of the Asiatic Soc. of Bengal*, (see particularly No. 101 of the *Journal*), may be consulted with advant-

of Arachosia, which gave the Chinese name of *Kaofu*, (and perhaps *Kipin* also) to the neighbouring country, and which, in the Mongol title of *Olán Robát* attaching to the ruins, still retains the distinctive epithet of "hill (city)," that was originally attached to it from its situation at the foot of the mountains¹. It has been surmised also that we have the same term *kauf* or *koh* in the Gr. *Κάκασος*, the name signifying literally "the mountains of the *Kás*," (comp. "*Casia regio*," of Ptol.); but the identification is not susceptible of proof².

I am induced to consider the noun of the eighth declension of Wilkins, and to write *kauf* accordingly instead of *kaufa*, from observing that in no instance throughout the inscriptions does the letter 𐎧 open on a vowel. The theme probably is *kaup* rather than *kauf*, the surd labial being used in Pehlevi and Parsi, and the silent 𐎧 may have been substituted for 𐎧 in the nom. on the same principle which caused the 𐎧𐎶 to be replaced by 𐎧𐎶 in the nom. of *darang*, "a lie." These delicate questions of orthographical structure, must, however, with our present limited materials, necessarily remain obscure.

age for the geographical illustration of the *Κώφης* and *Κωφῆνη*, but the etymology of the names is unnoticed by him.

¹ Pliny and Stephen, following the same authority, name the capital of Arachosia, Cophen, and the measurements of the geographers leave no doubt of the position of the city. *Olán*, I may add, in Mongol, exactly answers to the modern *koh* and ancient *kauf*, "a hill," or "mountain."

² The Armenians thus name the Caucasus *Kovkus*, Կովկաս; or *Khavgokh*, from the latter of which, apparently comes the Arabic قباخ *Kabakh*, and in all these terms we have the labial, which occurs in *kauf*, represented by the Greek *υ* in *κáv*. I suspect even that the famous *Káf*, of eastern romance, is nothing more than a corruption of *kauf*, "a hill."

⟨Y k (uniting with u).

⟨Y ⟨Y

KU. From this verbal root we have the following derivations.

KUN(A)VÁHYA, [Col. IV., l. 75, p. 254, and l. 79, p. 256,]
Facias.

AKUNAVAM, [Passim,] *Feci.*

AKUNAUSH, [Passim,] *Fecit.*

AKUMÁ, [Col. I., l. 90, p. 211, l. 94, p. 213, &c.,] *Fecimus.*

AKUN(A)VATÁ, [Col. III., l. 12, p. 230.]

AKUN(A)VATÁ, [Insc. No. 6, l. 37, p. 298.]

AKUN(A)VAYATÁ, [Col. I., l. 20, p. 198, and l. 24, p. 199,] *Factum est.*

AKUTÁ, [Col. I., l. 47, p. 203,] *Egit.*

As Lassen has announced the absolute identity of the roots *ku* and *kri*, the former being a mere orthographical degradation of the latter, it is necessary that I should state my reasons for still maintaining a distinction. In the first place, then, I can discern no sufficient reason for the change of *kri* into *ku*. Lassen says it arose from the influence of the following *u* in the conjugational characteristic¹, but I cannot admit the application to the language of the inscriptions of the Zend law of epenthesis, nor if the euphonic *u* were introduced do I see any necessity for contracting *kru* into *ku*². I must observe in the next place, that *kri* or *kar*, although unused in the simple verbal conjugation, occurs in its own proper form in composition, (compare *parikriyáhya*, &c.); while, that it cannot be the mere orthographical influence of the sign of the fifth class which changes *kri* to *ku*, is shown not only

¹ See Ueber die Keilinschriften, p. 246.

² It is true that the Sans. *kri* becomes *kur*, before the heavy personal endings and throughout the potential, the orthographical change being attributed, by Bopp, partly to the influence of the liquid *r*, which affects the vowel *u*, and partly to the weight of the suffixes; (Comp. Gr., s. 490,) and without having recourse therefore to the Zend law of epenthesis, there would be sufficient authority for supposing the old Persian to have substituted *kur* for *kar*, but the elision of the *r*, of which Lassen summarily disposes, still appears to me an insuperable objection to the identity of *ku* and *kri*. I must add, at the same time, that there is an instance of the same elision in the Vedic particip. कृत्, quoted by Westergaard, from the Nirukta, 5; 24.

by the term *akumá*, where the characteristic, though no longer apparent, may have once existed, but also by *akutá*, which must, as I think, be the præterite of another conjugation. I will not pretend at the same time to assert, that the roots *ku* and *kri* may not have been in their origin cognate. They are certainly used in the inscriptions, the one for the other, with an exact identity of signification; they are confounded in the conjugation of the verb in modern Persian, (compare *کنم kunam*, "I do," with "*kardam*," *کردم*, "I did"). Neither the Sanskrit nor the Zend affords any radically distinct correspondent for *ku*, while they appear to conjugate *kri* and *kčrē* in the fifth class¹, with a near assimilation to the forms used in the inscriptions, and it is very possible, therefore, that in some earlier stage of the Cuneiform language the roots may have been one and the same. All then that I will venture to suggest is, that in the age of Darius, the old Persian language had so far individualized the roots, as to employ *kri* or *kar* in the part. verbal noun, and in composition; while *ku* was used in all the ordinary verbal formations of the fifth class, and was even sufficiently distinguished to admit of conjugation in the second class, when the signification required to be modified from a transitive to a neuter application. This explanation I have derived from the actual examples furnished by the inscriptions; but I leave it to the consideration of better scholars, whether it may not also serve to support the distinction of the Vedic scholiasts, who refer all the forms of the fifth class to an independent (although of course a cognate) root कृ *kriv*, the existence of which has been doubted, owing to the disappearance of the radical वृ, (retained perhaps in the Cuneiform <𐎧>), from the various Sanskrit derivatives.

I shall now briefly compare the terms which occur in the inscriptions with their Sanskrit correspondents, but shall refrain as much as possible from drawing general inferences from the examples, regarding Cuneiform conjugation, as any deep inquiry

¹ In this I follow Wilson and Rosen, but it must be observed that the Indian grammarians distinguish clearly between the Vedic कृ *kriv*, of the fifth class, and the classical कृ *kri*, of the first and eighth classes, and that Westergaard adopts and illustrates the distinction. See Wilson's Dict., p. 240; Rig Vedæ Spec., Notes, p. 19; and Rad. Ling. Sans., p. 58 and 256.

into the old Persian grammar would hardly be suited to a Vocabulary. The root *ku*, then, with the transitive signification of "doing (something)," may be considered to be exclusively of the fifth class¹. I do not compare *kun(a)vāhya* with कृणोषि *krinōshi*, or 𐎧𐎠𐎧𐎡𐎹𐎡𐎹 *kērēnūshi*², but rather suppose it to be the 2nd pers. sing. of the present subjunctive, which if the term occurred in the Vedas, would be, I believe कृणवसि *krinvāsi*³, and as I am doubtful if the languages of the inscriptions admitted of the groupe *nv*, I place the supposed *guna* of the characteristic in this and all similar formations in a parenthesis.

In writing *akunavam* for the 1st pers. sing. of the act. imperf., instead of *akunvam* with Lassen, I follow the regular Sanskrit orthography of which Wilkins gives an example in असुनवं *asu-navam*. The form *akunaush* is of particular interest; for it not only shows, by the employment of the 𐎧𐎡𐎹, instead of 𐎧𐎡𐎹𐎡𐎹, that the old Persian certainly employed the *guna* in expressing the conjugational characteristic; but it also preserves, as I think, a more ancient personal termination than the dental of the Zend and Sanskrit⁴; *us* occurs in the classical Sanskrit as the ending of the 3rd person under four different conditions, but its employment is restricted to the plur. number, and it is thus compared with the Greek οὐσι⁵. I am not sure, however, that it is not also met with in the Vedas, representing the 3rd pers. sing. of

¹ For an analysis of the suffix in *nv*, Bopp must be consulted. *Comp. Gr.*, s. 109^a, 4.

² See Bopp's *Comp. Gr.*, s. 447.

³ Bopp (*Comp. Gr.*, s. 713) merely observes, that the Vedic *kēt* or subjunctive is distinguished from the indicative by the lengthening of the vowel of the class-syllable. I judge, however, from the inscriptions, that the distinction is in reality the introduction of an additional short *a* before the personal endings; *a + a* in the first class, &c., becoming *ā*, but in the second class the short additional *a* alone intervening between the root and the termination. *Comp. astiya*, indic., and *ahatiya*, subjunctive.

⁴ I say more ancient, as the true pronominal base of the 3rd pers. in Sans. is *sa*; and *ta* merely occurs in the secondary forms. Bopp and Gesenius, however, are agreed that, taking the whole range of language, the latter is anterior to the former.

⁵ In the potential; the imperf. of reduplicated roots; the imperf. of roots in *ā* of the second class; and in some instances in the multiform præterite. See *Comp. Gr.*, s. 462, and Burnouf's *Yaçna*, Notes, p. 147.

the imperf. There is at any rate a word *á-ri-noh* in the 30th Hymn of the Rig Veda, where it has this power, and where, in order to explain the form, the scholiast is obliged to suppose the 2nd pers. to be irregularly substituted for the 3rd¹. Whether at the same time this identification be admitted, or whether we consider *auśh* to be a weakening of *ot*, is of no great consequence. The termination is also found in *adarshanaush*, and is certainly therefore, in the language of the inscriptions, the regular characteristic of the 3rd pers. sing. of the act. imperf. of the fifth class.

I now come to the plural forms of the same tense *akun(a)va* in the 3rd pers., and *akumá* in the 1st. *Akun(a)va* is the Vedic अकृत्वन् *akrinvan*, the silent terminal being elided, and I compare *akumá* with the Sans. form असुन्म *asunma*², which is used equally, according to Wilkins, with असुनुम *asunuma*, and in representing which in the Cuneiform, the *n*, although performing an important grammatical function, is necessarily expunged as the first member of a compound consonant articulation. The dialectic elongation of the final *a* in all such verbal formations has been frequently remarked on as a peculiarity of the old Persian language.

The 3rd pers. of the middle imperfect *akun(a)vatá* presents a difficulty; it occurs in two passages, in one apparently as a singular, for the nom. is *dahyáúśh*; in the other, it is certainly a plural, being in immediate relation to the plural suffix in *śám*. Now *akun(a)vatá* will answer sufficiently well to the Vedic plural अकृत्वन्त *akrinvata*, formed like the Sans. असुन्वन्त *asunvata*³; but it will not correspond with the sing. *akrinuta*, and it is possible,

¹ See Rig Veda Spec., p. 48, and Rosen's remarks on the passage in the Adnotationes, p. 66.

² Wilkins merely gives it as a rule, that the *u* of the conjugational suffix may be occasionally dropped before व् and म्, but he does not explain the principle of this orthographical change. Bopp, however, would I suppose attribute the elision to the weight of those consonants which cannot tolerate the light *u*.

³ In Sanskrit, as we know, the *guna* is only admitted before the light terminations, or those distinguished according to the grammarians by a servile व्, which in the middle voice are unknown, except in the 1st pers. of the imperative, but I cannot satisfy myself that this rule applied to the language of the inscriptions, and I therefore give an optional *guna* throughout.

therefore, that in the aforesaid passage, *dahydush* may be used as a noun of multitude. If, however, it be determined that *akun(a)vata* is exclusively a plural form, a question will then arise whether the singular of the middle imperfect may not be *akutá*, *akunutá* being shortened to *akuntá* and subsequently to *akutá*, as *akunumá* was contracted to *akunmá*, and ultimately to *akumá*. I should be inclined, I confess¹, to accept of this explanation, regardless that, although we have in Sanskrit the optional orthography of *asunma* in the active, the corresponding contraction of *asunta* in the middle is wanting¹, did I not also find the meaning of the root in *akutá* to have undergone a modification, which seems to point to the employment of a different conjugation. I cannot of course be positive, but influenced by the latter consideration, and remembering that in no other verbal formation is there any visible difference between the sing. and plur. of the 3rd pers. of the middle imperfect, I prefer accordingly regarding *akun(a)vata* as an irregular substitute for the singular *akunutá*², and attaching *akutá* to the second class.

The next term to be considered is *akun(a)vayatá*, where we have the anomalous employment of the conjugational suffix in the passive voice, a peculiarity of construction which is of much interest, inasmuch as it connects the old Persian with the Greek and Gothic, and distinguishes it from the Zend and Sanskrit³. Independently of this there is nothing remarkable in the Cuneiform term, except that the *guna* is perhaps employed in the conjugational suffix in the place of the vowel-lengthening of the Sanskrit, which distinguishes roots in *u* in the passive voice, and that the conjunctive vowel *a*, being introduced between the suffix and the passive characteristic, converts that vowel into *v*. I do not think we can possibly read *akun(a)vyatá*, for if the suffix

¹ The *u* appears to lapse in *asunma* from the weight of the labial *m*, an influence which would not be felt in *asunuta*, where the personal sign commences with a dental, and this accordingly is a further proof against the possible contraction of *asuntá*.

² If *akun(a)vata* be admitted as the substitute of the Vedic अकृणुत *akrīnuta*, we must suppose, of course, that the old Persian, in the fifth conjugation as in the first, employed the connecting vowel *a* between the personal-endings and the class suffix, and of this peculiarity we appear to have another example in *kunaváhya*.

³ See Comp. Gr., s. 427, where this discrepancy between the Greek and Sans. is particularly noticed. There is, I think, however, an error of some consequence in the English translation of the first sentence of the paragraph in question.

coalesced immediately with the passive sign, there would be no occasion for altering the vowel, and we should have accordingly the orthography of *akunauyatá*.

The only remaining term is *akutá*, which, as I have already observed, I consider to be the 3rd pers. sing. middle imperf. of the same root, but conjugated in the second or seventh class, where the personal ending is either added immediately to the base, or the *u*, being interposed before a light termination, would be elided in combination with the Cuneiform dental¹. The respective employment of the active and middle voice appears in general to be as arbitrary in the old Persian as it is in Sanskrit², and in this particular instance, where we perceive the distinction between a transitive and reflective sense, I am inclined therefore to attribute it to a change of conjugation, rather than to a discrimination between the powers of the *parasmápadam* and *atmanépadam* forms; *akutá* seems to signify "he acted," the fruit of the action reverting to the agent; while in all the other forms, the verb governs an accusative case, and the action which it indicates passes over to the object.

𐎧𐎶 𐎧𐎺 𐎧𐎶𐎶 𐎧𐎺 𐎧𐎶𐎶 KUGANAKÁ, [Col. II., l. 9, p. 215,] *Cyganaca*. The name of a Persian town which was probably near the Susian frontier, (as it was the native place of a chief who aspired to the independent government of the latter province,) but the position of which I am altogether unable to illustrate, either from ancient or modern geography.

𐎧𐎶 𐎧𐎺 𐎧𐎶𐎶𐎶 𐎧𐎺 𐎧𐎶𐎶

KUR-USH, [Insc. No. 1, p. 270,] *Cyrus*.

KUR-AUSH, [Col. I., l. 28, p. 200, l. 39, p. 201, l. 53, p. 204, &c.,] *Cyri*.

This is the true vernacular reading of the name of the Great Cyrus, which in Hebrew was written כִּרְשׁ or כִּירִשׁ, and in Greek *Kūpos* or *Koūpos*. I have hitherto been content to accept

¹ I suggest the seventh class, as I am loth to believe that the nasal can be ever entirely lost in the conjugation of the root *ku*.

² *Akun(a)vatá* in the middle voice is thus used with the same transitive power as *akun(a)va* in the active voice, and the two forms also of *agarbáya* and *agarbáyatá* are employed indifferently.

the etymology, to which currency was given by a contemporary Greek¹, and comparing the name accordingly with the Sans. कुरु, Zend 𐬐𐬀𐬭𐬀𐬌 *hvarə*, and Pers. خور *khur*, I have even ventured from the change of the initial to draw an inference regarding the orthographical degradation of the Persian language in that early age².

Consequent, however, on the discovery that the letters 𐬀 and 𐬀 present the same alphabetical power, I am constrained to abandon the identification of Ctesias; for the guttural does not I believe in any example throughout the inscriptions represent the Devanagari sibilant³. I now compare *Kurush* with the Sanskrit कुरु, which was probably a popular title among the Arian race before the separation of the Median and Persian branches⁴, and I support the illustration by remarking, that the rivers of Georgia and Persis, which we know in antiquity to have been distinguished by the royal title of *Kūpos*, still retain the old pronunciation in the modern orthography of کور *Kur*⁵. It would be a curious though unprofitable enquiry to investigate the reasons which induced the compilers of the Zend Avesta, to disfigure the name of the great national hero of Persia, under the artificial form of 𐬐𐬀𐬭𐬀𐬌 *Huṣrava*, from whence we have the modern

¹ Καὶ τίθεται τὸ ὄνομα αὐτοῦ ἀπὸ τοῦ ἡλίου Κύρον. Ctesias in Phot. Biblioth., col. 125. The same etymology is repeated by Plutarch in Vit. Artaxerxis; by the author of the Etym. Mag. *in voce* Κόρος, and by Plethon in his Commentary on the Zoroastrian Oracles; and Lassen adopts it in his Memoir, Ueber die Keilinschriften, p. 154.

² See the observations on the letter 𐬀 in the Chapter on the Alphabet, p. 91.

³ That there was an interchange between the guttural and sibilant in Babylonian is certain, for *Nabokodrossor* is as often written with the *s* as the *k*, and the same change of course is found in comparing modern Persian with the Sanskrit, but I think that the language of the inscriptions uniformly represents 𐬀 by 'uva.

⁴ The *Kuru* race of ancient India, descended from the famous कुरु, the son of *Samvarana*, is too well known to require notice.

⁵ Strabo, lib. XV., p. 501, expressly says, that the Persian river *Kūpos* derived its name from the king, "Ὁ δὲ μετέβαλε τὸ ὄνομα ὁ βασιλεὺς."

خسرو *Khusrú*¹. That name is, I believe, to be first found in the geographical title of 'Οσρονηή or 'Οσδρονή, and it may be presumed, therefore, to have been borrowed from a Parthian Satrap², but unless from some fancied resemblance in sound and application to the person of Cyrus, I am utterly unable to understand how, in the time of the first Sassanians, it should have attained the popular pre-eminence which distinguishes it in the pages of the Zend Avesta, and which from that source has descended to it in all subsequent history. I will only add, that the absolute identity of the Sanskrit, Hebrew, Greek, Persian, Median, and Babylonian orthographies of the name confirm in the most satisfactory manner its true and primitive form.

The genitive form of *Kuraush*, which occurs repeatedly at Behistun, is extremely valuable in showing the respective employment of the letter ><< in combination with *u*, and the letter > with *a*, as well as in connecting the case-endings of the old Persian with those of the Sanskrit, the Lithuanian, and the Gothic, in all of which, themes in *i* and *u* take the *guna* before the genitive sign *s*³. The *aus*, in fact, of the language of the inscriptions is exactly identical with the Sans. genitival ओः *os*, the Lithuanian *aùs*, and the Gothic *aus*, and it may moreover be compared with the Latin *ûs* in the fourth declension, where the elongation takes the place of the *guna*, and also with the 𐬵𐬀𐬎𐬌 *êus*, of the Zend⁴, where the *guna* forms a distinct diphthong in conjunction with an epenthetic *i*.

¹ The Zend *Huṣṛava* appears to have been taken immediately from the Sans.

सुस्रवः *Susravas*, who is mentioned in the *Purānas* as one of the *Prajāpatis*, and who, according to Burnouf, plays a conspicuous part in the Vedas; but this does not in any way explain the application of the name to the popular hero of Persia. See Viah. Pur., p. 50, n. 2, and Burnouf's Cun. Mem., p. 172. Burnouf, indeed, appears to doubt in the passage last quoted, if *Huṣṛava* can be intended to designate the great Cyrus.

² Procopius distinctly says that the Mesopotamian 'Οσρονηή was named after a certain king, 'Οσρόος, who reigned there. De Bel. Pers., l. 1., c. 17. Now 'Οσρονηή is first mentioned in the campaign of Crassus, but the Parthian king 'Οσρόος was only contemporary with Trajan, and it cannot therefore have been from him that the province derived its name.

³ For an examination of these genitive endings, see Bopp's Comp. Gr., ss. 185 and 186.

⁴ Burnouf has very successfully analyzed the Zend genitive of themes in *u*, in his Commentary on the Yaçna, pp. 90 and 156.

𐎧𐎫𐎧𐎺𐎠𐎹 KUSHIYÁ, [Insc. No. 6, l. 30, p. 294.] *Cossæi*. I believe this name, which occurs in the geographical list at Nakhsh-i-Rustam, to refer to the Cossæans of Southern Media, who were indifferently termed by the Greeks *Kossæioi* and *Koussæioi*¹. An exposition of the views which I entertain regarding the settlement of the *Kush* in Persia must be reserved for another portion of the Memoir; for the subject, presenting an unbounded field for speculation with very little of determinative proof, requires to be examined with equal diligence and caution. I will here only observe, that without subscribing to the extravagant theory of Bryant regarding the almost universal sway of the Ammonian Cushites, I am still inclined to see in the *Kushiya* of the Inscriptions and Cossæans of authentic history, a remnant of that primitive and powerful race, which furnished its contingent under Memnon, at the siege of Troy, and branches of which were also led under *Tirhak* and *Zerah* to the invasion of Judæa. I see, indeed, strong reasons for identifying in many instances the Hebrew *כּוּשׁ* *Kush* with the Eastern Æthiopians of the Greeks, who built Susa, who were the subjects of Cepheus, and whose principal establishments in the time of Darius were partly in the Median mountains and partly in the Gedrosian deserts; and I further suppose this to have been the dominant race in Southern, and perhaps in Central Persia, prior to the Arian immigration².

The Persian *Kushiya* is evidently the nom. plural of the ethnic title, the adjectival suffix in *iya* being added to the proper name; but it is worthy of remark, that the Median correspondent is used without the plural characteristic, and that in the Babylonian we have the territorial, rather than the ethnic, designation.

¹ For a collection of all the notices of the Greek and Latin Geographers and Historians regarding the Cossæans, see Cellarius, vol. II., pp. 675, 682, and 690.

² If it be true, as Dr. Lepsius has recently asserted, that the *Beja*, the most ancient dialect of the Æthiopic, be of the Caucasian family of languages, it will go far to connect the Æthiopians of Africa with the Eastern *Kush*. I have long, indeed, suspected, and am becoming daily more convinced that the languages of the so-called Median and Babylonian Inscriptions will be found to be nearly connected with those of Western Africa, and that the links of the connection will be traced in the migrations of the *Kush*.

<<𑀓 kh.

<<𑀓 𑀲 𑀓 𑀓 KHSATĀRAM, [Passim,] *Corona* or *Imperium*.

This word is of course to be compared with the Sans. क्षत्र, used to denote "the warrior caste," and with the Zend 𐬕𐬀𐬎𐬌𐬎𐬎𐬀 *khshathra*, which was employed in a more specific manner to designate "a king"; but its etymology is subject to some uncertainty, for खद् in Sanskrit merely signifies "to eat" or "divide," and the grammarians therefore have supposed a *Sautra* root of the same form, with the meaning of "protecting" or "defending". As however the Sanskrit *kshatra* is frequently written *chheta* in Pali³, and as the tendency of the guttural and palatal to interchange is notorious, I cannot help suspecting that the primitive Sanskrit *kshad* has been corrupted into खद् *chhad*, which does actually exist in the classical language with the same signification of "covering" or "screening," and from which the *chhatra*, or "parasol," the symbol of royalty, is avowedly derived⁴. The only question is whether the term may not have originally denoted "a crown," as *covering* the head, and whether its application may not have been subsequently transferred from the special to the general, both in regard to the regal or "crowned" class of India⁵, and to the word in Zend expressive of "royalty." On the one hand, there is I think reason to suspect that the Hebrew כְּתָר, whence the Gr. *kirap̄is*, may represent the Persian *khshatram*⁶, and as kings are in many languages

¹ *Khshathra*, "a king," occurs repeatedly in the Zend Avesta, and the meaning is considered by Burnouf to be determinately established; see Yaçna, &c., p. 151, &c., &c.

² See Westergaard's *Rad. Ling. Sans.*, pp. 161 and 333. Also, Wilson in *voes*, and Lassen's *Memoir in the Zeitschrift*, &c., p. 18.

³ *Journ. As. Soc. Beng.*, vol. VII., p. 564.

⁴ I am afraid to connect *chhatra* immediately with *khshatram*, although they may both etymologically signify "a royal covering."

⁵ The term, indeed, was no doubt used long before the introduction of caste; comp. the ethnic names *Sarpaīdai*, *Oξυδράκαι*, &c.

⁶ The repugnance of the Semites to the compound Arian articulations was notorious, and *khsh* would naturally be contracted to a simple guttural; the כְּתָר

termed "crown bearers", while I am not aware that the term denoting "a crown," or any other emblem of royalty, is ever derived from a root conveying the abstract idea of "ruling," we might perhaps infer "a covering for the head," to be the primary signification of the Cuneiform term. On the other hand, the Sanskrit *kshatra*, and Zend *khshathra*, have every appearance of being derived immediately from *kshad* or *chhad*, "to screen or defend (the people)²"; and Rosen, moreover, from the Vedas, gives an abstract noun *kshatram*, with the signification of "strength," which he compares with the Greek *κράτος*³, and which in form is absolutely identical with the *khshatrām* of the inscriptions. Leaving it doubtful, therefore, which may be the original, and which the secondary signification, I have rendered the term by "crown" or "empire" throughout the translations, according as may be most agreeable to the English idiom⁴. I have only to add, that *khshatrām* is used in the inscriptions as a neuter noun of the first declension, and that it thus indifferently represents the nominative and accusative case.

𐎧𐎡𐎴 𐎠𐎹𐎶 𐎧𐎡𐎴 𐎧𐎡𐎴 𐎧𐎡𐎴 𐎧𐎡𐎴 𐎧𐎡𐎴 KSHATRĀPĀ-VĀ, [Col. III., l. 14, p. 230, and l. 55, p. 235.] *Satrapesque*. The occurrence of this word in the inscriptions renders useless all further speculation as to the etymology and meaning of the word Satrap⁵. The verbal

of Esther, moreover, refers particularly to the Persian "crown;" see Gesenius in voce. The word, moreover, is generally derived from 𐤒𐤕𐤕, "to surround," the *κίραρις* being a "diadem" or "cincture."

¹ Comp. Arm. 𐎧𐎡𐎴𐎠𐎹𐎶 (Ind. *Thakore*?) lit. *Táj áwar*, "crown bearing." *Táj* is of Semitic origin.

² *Khshathráti* is also used in Zend with the meaning of "empire," and Bur-nouf says that *kshatra* has frequently the same signification in the Vedas, so that on the whole, no doubt, "imperium" is the best translation for the Cun. *khshatrām*. See Journ. Asiatique, Sér. IV., tom. IV., No. 20, p. 479.

³ See Rig Vedæ Spec., Notes, p. xi.

⁴ I rather think that we have *khshatra*, "a king," in the last word *στάρπα* of the famous Persian verse in Aristophanes—"Ἰάπρα μὰν ἐξαφ' ἂν ἀπισσοῦνα στάρπα," Acharn., Act I., Sc. 3, [see Mitchell's Arist., vol. I., p. 27,] but I am not quite satisfied as to the meaning of the entire phrase.

⁵ This is a subject which has been much discussed; see Gesen. Heb. Lex., Eng. Ed., p. 41, for several fanciful derivations, De Sacy's being the only one which is near the truth. Sir J. Malcolm compares *chhatrapa*, "the holder of the parasol," and Anquetil suggests the etymology of *Satar-pai* سرته پای, "below

affix which is added to *khshatṛa* is identical with the Sans. पति *pá*, whence پاس *pas*, پان *pán*, &c., in Persian, and the compound therefore signifies either “preserving the empire,” or “preserving the crown.” In the only two passages where the term is found, the copulative conjunction *vá*, answering to the Sans. च, and allied of course with the Semitic ו, is added to the nom. of the noun to connect the phrase that is attached to it with the preceding clause. *Khshatrāpá* is probably declined like a theme in long *a* of the first declension.

The change of the initial sound which is observable in the Hebrew אֶחָשְׁתָּרָפַיִם, is nothing more than might be expected from the impossibility of adapting to the Semitic organs of speech the articulation of the Arian *khsh*, as a single power¹; but I am somewhat at a loss to understand the origin and application of the terminal *n*, although I perceive traces of the same (euphonic?) ending in the corrupted Median orthography of *shagshapáwanm*. In the Arian dialects, certainly, the suffix was preserved in its pure form, as we may assure ourselves by comparing the Cuneiform term with the *Kshatrāpa* of *Rudra Dama's* inscription at the Girnar Bridge, and upon the Saurashtran coins of the same family².

The Satraps were, as it is well known, originally the Governors or Viceroys of the large provinces of the Persian empire, but the title in later times appears to have been equally adopted

the star.” *Mém. de l'Acad.*, tom. LVI., p. 291, (12mo. Edit.) Hyde, again, (*de Rel. Vet. Pers.*, p. 325,) would fain refer the title to استرپان, lit. “mule-keeper,” supposed to have been adopted as an honorary epithet by the great officers of the State. While Prinsep, (*Asiat. Journ. Bengal*, vol. VII., p. 345,) and Wilson, (*Arian. Ant.*, p. 405,) relying on the exclusive application of the Sanskrit पति, render the Saurashtran title by “protector of the Kshatriyas,” or “patron of the warrior class.” I differ from De Sacy's explanation merely in referring the suffix immediately to the Sans. पति, rather than to the modern Pers. corruption پان *bán*. See *Mém. de l'Inst.*, Classe d'Histoire, &c., II., p. 229.

¹ The Hebrew word occurs in Esther iii. 12, viii. 9, and ix. 3; and its Chaldee correspondent in Dan. iii. 2, 3 and 27, vi. 2 and 3.

² See the Coin Legends in the *Journ. Asiat. Soc. of Bengal*, vol. VI., p. 382, and vol. VII., p. 345.

by those who exercised independent royal functions. In the mutilated Greek Inscription at Behistun, the great Parthian king Gotargēs is thus content to name himself "Satrap of Satraps," (ΣΑΤΡΑΠΗΣ ΤΩΝ ΣΑΤΡΑΠ - - - - -), and throughout the whole series of the coins of the Saurashtran dynasty the titles of Raja and Kshatrapa are applied to the same individual. I have never met with the term in Arabic or Persian works², and I greatly doubt if it was employed in Persia subsequent to the rise of the Sassanians.

𐎧𐎡𐎹 𐎠𐎧𐎡𐎹 𐎧𐎡𐎹 𐎧𐎡𐎹 𐎧𐎡𐎹 KSHATHRITA, [Col. II., l. 15, p. 216, &c.,] *Xathrites*. A name which is evidently of kindred etymology with *khshatrām*, but in which I am altogether unable to explain the reason of the substitution of 𐎧𐎡𐎹 𐎧𐎡𐎹 for 𐎧𐎡𐎹, for the latter character will coalesce with the *i*, as in *Atřina*, *Atřiyātiya*, &c., as well as with the *a*. In pronunciation, we can of course readily distinguish between the *tř*, where the *r* was almost dormant, and the *thr*, where the dental combining with the liquid in its full force underwent aspiration; but I confess I do not understand the etymological reason of the distinction in the derivatives from *kshad*. The name would appear to have belonged to the son or next heir of Astyages, as it was assumed by an impostor Phraortes, who sought in the time of Darius to re-establish the independence of the Medes³; but there is certainly no such individual mentioned in Grecian history, nor have I met with the name applied to any other chieftain. I should translate *khshathrita*, "who has obtained the empire" (or "crown,") comparing the termination with the Sanskrit participle, 𑖦𑖯𑖪𑖱⁴.

¹ See Journ. Royal Geograph. Soc., vol. IX., p. 114. There is also a copy of this fragmentary legend in Hoeck's *Vet. Med. et Pers. Mon.*, p. 141, which must have been taken by Grelót, who accompanied Bembo in his Persian tour not many years after the old tablet was destroyed to make room for the Arabic inscription. Bembo's visit was in 1673, and the Arabic tablet is dated A.H. 1026.

² I do not regard the سترب of the Lexicons, as that term has been evidently foisted in through the Arabic from the Greek.

³ This Median revolt will be further noticed under the head of *Fravartish*.

⁴ The true reading, however, may perhaps be *Khshathraitā*, the name being formed in the same manner as the Zend *khshaitā*, "a king."

𐎧𐎡𐎹 𐎠𐎫 𐎡𐎹 𐎡𐎹 KHSHAPA-VÁ, [Col. I., l. 20, p. 198,]

Nocte-que. This word occurs in the phrase, *khshapavá rauchapativá*, "both by night and by day," the postposition *pati*, (for 𐎡𐎹 or 𐎡𐎹𐎠𐎫 *paiti*), governing both the nouns in the accus. case, and the copulative conjunction *vá* being appended, in one place immediately to the noun, and in the other to the governing particle. It follows, therefore, that the true forms must be *khshapamvá* and *rauchampativá*; and it is this example of the elision of the nasal before the semi-vowel *v* which, among other considerations, has induced me to interpose an *a* in the groupe 𐎡𐎹 𐎡𐎹 that occurs so frequently in the verbal formations of the fifth class. The nom. *khshapa* answers to the Sans. क्षपा, the Zend 𐎧𐎡𐎹𐎠𐎫 *khshapó*¹ and Persian شب *shab*; and according to Rosen, it may also be compared with the Latin "*crepusculum*."

𐎧𐎡𐎹 𐎠𐎫 𐎡𐎹 𐎡𐎹 𐎡𐎹 KHSHANÁSÁTIYA, [Col.

I., l. 52, p. 204.] *Cognoscat.* I consider the Cuneiform *khshands* to connect the Greek γνῶσ-κω, (Lat. *gnos-co*.) with the Pers. شناس *shinás*, the guttural being preserved in one form and the sibilant in the other; but I doubt if the Sans. क्षा, which is usually compared with the Greek verb, can be of cognate origin².

¹ I have never met with the Zend nom. sing., but I have *khshafna* in the nom. plur., and *khshafné* in the loc. sing., while the abl. sing. is *khshaparát*; so that the theme evidently follows the declension of the Sans. अहन्, which has अहः in the nom. for अहर्, and which uses the *r* in all its compounds. As a further proof that the nouns are declined alike, compare the Zend locatives *paiti aṇé*, *paiti khshafné*, and consult Bopp, Comp. Gr., s. 40, and Yaçna, p. 34. I consider this evidence of the interchange of the *n* and *r* to be of much orthographical value.

² See Rig Vedæ Spec. Adnotat., p. xi.

³ क्षा altered to क्षा, as it is in all the special tenses, has with the suffix of the ninth class produced the Pers. دان *dán*; *khshanás* and γνῶς must, on the other hand, I think, be compound roots, but I know not the elements. Schneider's explanation, γῶς, γνῶς, and by reduplication γγῶς, cannot at any rate be admitted.

In the Median form, which I read *Aksahasha* or *Aksahassa*, the *r* has given way to a cognate aspirate, and in the Babylonian orthography, which I doubtfully give as *Ah(a)shhárasha* or *Ah(a)shharashhá*, these aspirations are so formidably multiplied as almost to impede pronunciation. Of all the various forms that have been yet discovered, the hieroglyphic *Khshharsha* upon the Vase of Caylus approaches nearest to the true orthography¹. As we have no example in the inscriptions of the name of Xerxes in the gen. case, it must be doubtful whether the noun follow the first declension in long *a*, or whether it may not rather be of the twelfth class of the eighth declension of Wilkins.

If we may credit the lists of Assyrian kings preserved by the chronologers, the royal name of Xerxes had been adopted on the banks of the Tigris in the very remotest antiquity², and this is the more remarkable as the etymology is certainly Arian. After the time of the Achæmenians, however, it appears to have fallen entirely into disuse. Neither is it employed in the Parthian nomenclature, nor has it survived under a corrupted form in the Zend Avesta, or in Persian romance. There was an Armenian province of *Ξερξηνή*, named from the king³. There is also a town of *Drangiana*, mentioned by Ptolemy under the name of *Ξαρξίαρη*⁴, and it is possible that the royal title of *شاه* *Shár*, which belonged to the kings of the Persian colony of *Ghurjestán*, established in the Paropamisian mountains⁵, may preserve a trace of the ancient designation, but I have never met with any other name which could be conjecturally referred to it⁶.

taxerxes (Mnemon), is perfectly consistent with history, and fixes the Exodus of Ezra in B.C. 398, and that of Nehemiah in B.C. 385, (instead of in 458 and 445), the colonies, in fact, leaving Babylonia under Artaxerxes Mnemon, and not under Artaxerxes Longimanus.

¹ See Heeren's *Researches*, vol. II., p. 340.

² See the several Lists in Clinton's *Fasti Hellenici*, vol. II., p. 267.

³ Strabo, p. 364, and Stephen. *in voce*.

⁴ Lib. VI., c. 19.

⁵ De Sacy published a Memoir on this colony in the *Mines de l'Orient*, vol. I., p. 321.

⁶ That Gesenius (*in voce*) should pretend to compare *אחשורוש* with *شیرشاه*, "Lion King," is a proof that the study of Persian comparative philology is still in its infancy.

both the βασιλεὺς of the Greeks, and the *Rāja* of India¹; but their native epithet appears to have been that of *Terkhán*, which is in use among the Turkish tribes to the present day². I know not indeed of any employment of the ancient title under the Arsacide empire, except in the *Zabos* of the coins of Kadaphes, who reigned in Cabul, about B.C. 120³. Under the Sassanians, with the revival of Persian habits and institutions, the appellation was partially resumed, but it came in apparently from the East; while the Semitic *Malká*⁴ continued to hold its place on the coins and in the royal inscriptions until a late period of the dynasty. The title certainly occurs in the name of *Shahpuhri* (Sapor), as well as in the territorial epithets of Σαγανσαῖ and Κερμασαῖ, assumed respectively by Bahram III. and Bahram IV.⁵, and it is, I think, even to be recognized in the Pehlevi Inscriptions of the second and third *Shapúr*, at *Kermánsháh*, (where, however, ΩΩ22 has been hitherto read *Vohiá* instead of *Shahyá*⁶.) It must have been well known at the same time in the extreme East, to have given rise to the distinctive epithet of *Sháhishahán*, applied to the King of Persia in the Gupta Inscription of the sixth century, upon the pillar at Allahabád⁷, and that it had come into general use also in Persia among the later Sassanians, is shown by the title of Σαδασαδασάχ, which is assumed by Siroes,

¹ See the coins of Gondophares, Arsaces, Pacorus, &c., in Cunningham's Plates, No. 14 and 15, and Wilson's Ar. Ant., Plate V. I have also seen coins of Orodes with the same Indian legend.

² Περσιστὶ δὲ Τορκὺν βασιλεὺς ἐρμενεύεται. John of Malala, Ed. Dindorf., p. 270. The title of *Terkhán* is now given among the Uzbegs to the heir-apparent; but in the lists of *Ibn Khurdádbeh* and *Abu Rihán*, it is stated to belong to the king himself.

³ In giving this date, I follow Lassen with some hesitation. See Journ. Asiat. Soc. Bengal, vol. IX., p. 765.

⁴ The Semitic *Malká* is also found in the Parthian transcripts of the records of the early Sassanians, and was thus probably in use in the West under the later Arsacides. I think even it may be read on the Perso-Scythic coins of Cabul, of the sixth and seventh century, upon which the concluding epithet appears to be *Hurasán Malká*, "king of Khorassan." See Journ. Asiat. Soc. Bengal, vol. VII., Pl. XXII.

⁵ Agathias, lib. IV. c. 24, says distinctly that Σαγανσαῖ signified in Greek, Σεγαστανῶν βασιλεὺς, and he refers to the same explanation in noticing the title of Κερμασαῖ, in the 26th chapter of the same book.

⁶ Even in the last critique upon these inscriptions in the Journ. Asiatique for January, 1843, the old reading of *Vohiá* is still retained, but it is extremely doubtful if such a term was ever in use in Pehlevi.

⁷ See Prinsep's remarks in the Journ. Asiat. Soc. Bengal, vol. VI., p. 974.

in his letter to Heraclius¹. I have not yet been able to satisfy myself of the reading of the Sassanian coins of this age, but the *Malká* of the earlier series has certainly disappeared, and I think that the title has been replaced both by *Khzata* (the *zāda* of Siroes,) and *Huta* (for خدا²). After the rise of Islam, the old term continued to be extensively used in the eastern portions of the Persian empire. In a very curious list of royal synonyms, which was I believe first published by *Ibn Khurdádbek* in about A.H. 280, and which was afterwards re-arranged and tabulated by the famous *Abú Rihán* in about A.H. 420³, it is applied under different forms to the Kings of *Cábúl*, of *Khárizm*, of *Sughd*, of *Fergháneh*, of *Termid*, of *Khatl*, of *Bámián*, and other neighbouring countries, and the *Sháh Náme*h of *Firdousi* is alone sufficient to establish that in that age the particular applicability of the title to the monarchs of Persia was universally admitted; but still I am doubtful if it ever regained its proper and legitimate pre-eminence in the country in which it originated until the rise of the Suffavean dynasty⁴. At present, as we know, the King of Persia is termed the *Shah* شاه, "par excellence," and his paramount epithet of شاهنشاه *Shahinshah* nearly reproduces the *khsháyathiyándm khsháyathiya* of the inscriptions⁵.

¹ Paschal Chronicle; Ed. Dindorf., vol. I., p. 735. Ammianus Marcellinus, also, applies the exact title of *Saansaa* to the Persian kings, but I cannot now refer to the passage.

² These coins are figured in Marsden's Num. Orient., vol. II., Pl. XXIX., and in Longperrier's Mem., Pl. X., XI., and XII., and I believe that the legends have been pretty satisfactorily deciphered by Dr. Olshausen of Copenhagen. I have in my own cabinet, however, several new and perfect varieties that have never, I think, been published. *Khodá*, now used for "God," was the royal title of the ancient kings of *Bokhara* and *Guzagán*.

³ I quote *Ibn Khurdádbek*, after a copy taken by Dr. Sprenger from the unique MS. in the Bodl., No. 993. *Abú Rihán's Hadikat ul Ahbáb* حديقة الاحباب, a most excellent work on Chronology and Astronomy, is in my own library.

⁴ In India, the title of *Sháh* was commonly used from the first establishment of the Patan sovereigns, in the sixth century of the Hejrah; but in contemporaneous Persian numismatology it is, I believe, unknown, except as a proper name. In the oldest Persian written works, however, the titles both of *Sháh* and *Pádsháh* (*Pád* being the Pehlevi *Pad*, Sans. पति *pati*,) are frequently found; and D'Herbelot says that the Boides assumed the title of *Sháhínsháh* in the fourth century of the Hejrah.

⁵ For a collection of all the ancient authorities regarding the title of "king of

The Cuneiform noun is regularly declined as a masc. of the first declension in short *a*, the terminations in *a*, *am*, *ahya*, *á*, and *andm*, answering respectively to the Sanskrit endings in *अः*, *अं*, *अस्य*, *आः*, and *आनां*. Bopp observes of the gen. plur., that the true inflexion is *आन्*¹, and that the *n* which precedes it, both in Sanskrit and in Zend, is euphonic; but this does not explain the lengthening of the vowel of the base in the former language, and I am inclined, therefore, to see in the syllable *an*, which interposes between the base and the case-ending, the pristine plural characteristic to which I have more than once alluded, and the existence of which, if established, will form an important link between the languages of the Arian and Semitic family.

𐎱𐎠𐎧 g.

𐎱𐎠𐎧 𐎠𐎧 𐎠𐎧 𐎠𐎧 GADÁRA, [Ins. No. 4, l. 18, p. 280, and No. 6, l. 24, 25, p. 294,] *Gandara*. For the ancient illustration of this name, which was equally well known in Sanskrit history as *गन्धार*, and among the Greeks under the forms of *Γανδαρίης*, *Γανδαρκίη*, &c., it may be sufficient to refer to the elaborate commentaries of Wilson, Troyer, and Lassen²; but I cannot avoid adding a few remarks on the application of the title in

kings," assumed by the Persian monarchs, see Brisson, de Reg. Pers. Princ., p. 4. sqq. In *Sháhinsháh* we have the Chaldee plur. 𐎱𐎠𐎧, which was also used in Parthian, instead of the Pehlevi *Malkán*.

¹ See Comp. Gr., ss. 245 and 246; Bopp, however, observes that the euphonic interposition appears to be pristine, since the Zend partakes of it; and he admits the connexion of the accus. ending in *आन्* with the plur. 𐎠𐎧 *án*, of the modern Persian.

² Professor Wilson's remarks on the Gandháras are contained in the *Asiat. Res.*, vol. XV. p. 103; in his *Arian. Ant.*, p. 131, &c., and in his admirable translation of the Vishnu Purana, pp. 191 and 443. For Captain Troyer's Notes on the same subject, see his edition of the *Rája Tarangini*, tom. II., p. 316, &c., and Lassen's arguments are given in the *Pentapot.*, p. 15; in his *Ind. Alterthumsk.*, p. 422, and in his *Memoir on Bactrian history*, (translated in the *Asiat. Journ. Bengal*, vol. IX., Part I., p. 473, sqq.) The Sanskrit authorities embrace every ancient work of any note; among the Greeks who mention the name we have Hecataeus, Herodotus, Strabo, Dionysius, and Ptolemy, and the Chinese notices which are most ample occur in the respective travels of Fā Hian, of Soung yun, and of Hiuan Tsang. See *Foë Koué Ki*, pp. 66, 363, and 379.

more recent times. The Gadara of the inscriptions is no doubt identified with that of the Greeks and Hindus, and refers to the country along the banks of the Indus, and its tributaries as they descend from the mountains. The question then arises if there be any connexion between this title and the modern *Candahár* (قندهار). Wilson and Tröyer are of opinion that the country of the *Gandhāras* may have extended from the Indus to the vicinity of the Helمند; while Lassen, on the contrary, holds the two *Candahārs* to be entirely distinct, and sees in the Western settlement an extraordinary instance of the migration of a name. The inquiries, however, which have been hitherto instituted and which give these results, depend entirely on Greek, Sanskrit, and Chinese authorities, descending no lower than the era of Islām, and I propose therefore to add something from the Arabs. In Eastern geography we have ample and repeated notices of *Candahár*, and, with one exception which I shall presently mention, the name invariably applies to the country on the Indus until comparatively modern times. I may quote in chronological succession, *Beládhori*, *Mass'oudi*, *Abú Rihán*, *Edrisi*, and *Abulfedá*, to show that *Sindhu Gandhāra* retained its ancient title, as low at any rate as the sixth or seventh century of the Hejrah¹, and I may add, that during the same period Arachosia, with its successive capitals of *Penjwái* and *Tanganábád* would appear to have entirely lost the designation². That the name of *Candahár*, however, was actually borne by the city on the *Arghandáb* soon after the institution of Islām, is proved by the account preserved of the first Arab invasion of the country in about A.H. 55³, and

¹ Candahar on the Indus was taken by the Arabs, who ascended the river in boats, under the Caliph Mansoor, about A.H. 145. See Reinaud's *Frag.*, (Beladh.) p. 179. It is noticed by Mass'oudi (Sprenger's Ed.), pp. 234 and 381. Abú Rihán gives the position of Vihund (modern Hound or Uhúnd,) the capital of Candahár, on the west bank of the Indus, fifteen farsakhs from Peshawar; (see Reinaud's *Frag.*, p. 88.) Edrisi's account, p. 182, is probably from Ibn Haukal, but Jau- bert's translation is always suspicious; and Abulfedá, (p. 357, Ar. Text,) in his notice of Vihund, appears to follow Abú Rihán. I here merely quote printed authorities, but in manuscript works the indication is even still more clear.

² The ruins of Penjwái are still to be seen about eighteen miles south-west of the modern town of Candahár, but I am doubtful about the site of Tanganábád.

³ All the geographers and historians from Ibn Khurdádbeh to Abulfedá, describe ^{الرخج} *Arrakhaj*, (Arachosia,) and Penjwái, but Yákút alone in the *Mo'ejem el Baldán*, applies to the same place the name of Candahár. He follows Beládhori word for word, and describes the march of 'Obád Ibn Ziyád from the

we must suppose it therefore to have only temporarily fallen into disuse between that period and the rise of the Chinghizian kings.

I cannot pretend to explain with any certainty the cause of this assumption of the name, but I will offer a very probable conjecture. We are enabled from the Chinese authorities to trace in the sixth century of Christ the transport of the most holy relic of Buddhism, the famous water-pot of Fo, from the banks of the Indus to the frontiers of Persia, that is, from the eastern to the western *Gandhāra*. This remarkable transport must, I think, necessarily have been attended with a great popular emigration¹, for the *Gandhāras* regarded the relic as a sort of national palladium, and previous attempts at its removal by foreign but victorious powers had failed². They probably, as I think, were driven from their native seats by the incursions of the lesser *Yuč-chi*³, and carrying their treasured vessel with them, they founded a new settlement on the banks of the *Arghandāb*, and gave their name of course to the country of their adoption. I may add, that the pot of the *Gandhāras* is to be seen at the present day among the ruins of the town of *Candahār*, still retaining its holy and miraculous character, and thus affording one of the only traces that remain to us of the early fortunes of the province⁴.

Sinārud of Sejestan to Rudbār, then along the Helمند to Bost, and from thence across the Desert to Candahār, where he founded the town of 'Obādīeh. The passage in Reinaud's *Frag.*, p. 164, requires correction after Yákút.

¹ The Pot of Fo was in Foč-leou-cha or Peshāwar, one of the chief cities of the *Gandhāras* of the Indus, when Fā Hian visited the place in about A.D. 403; but it could hardly have been there at the period of Soung yun's journey to the same city (he names it however, Foč-sha-fou) in about A.D. 503, or it would have been noticed by him. At any rate it had been removed to the Persian frontier some time before Hiuan Tsang's visit to Pa-lou-cha, (which is the same town of Peshāwar,) in about A.D. 635. "I suppose the tyrant who ruled in *Gandhāra* at the period of Soung yun's journey, and who was not of the Buddhist faith, to have been king of the invading Yuč-chi, and I place therefore the great emigration of the *Gandhāra* tribe to the westward in about A.D. 480. Compare Foč Kouč Ki, pp. 76, 351, 355, and 356.

² Foč Kouč Ki, p. 76.

³ *Ibid.*, p. 84.

⁴ This pot has been inscribed with a modern Arabic legend, and was therefore little noticed by our Anglo-Indian antiquaries at Candahār, but it exactly answers the description given in Foč Kouč Ki, p. 32, from Chinese authorities; and on great occasions the Dervishes of Candahār are still regaled with sherbet at the public expense from the capacious bowl; it is believed, also, by the vulgar, that the *kashkul*, or "water-pot," as it is called, will contain any quantity of liquor without overflowing.

Gadára, in the inscriptions, is used as the name of a country, but in Greek and Sanskrit it generally occurs as an ethnic title. Earlier migrations of the tribe may account for the position of the *Candari* of Pliny and Ptolemy, and the *Gandari* of Pomponius Mela, on the northern frontiers of Sogdiana, as well as for the town of *Gádap* in *Khorassán*¹, but as the name of *Gadára* is always found in the Cuneiform geographical lists in conjunction with India, Sattagydia, or the *Sacæ*, we must certainly believe the body of the nation to have resided, in the time of Darius, between *Pesháwar* and *Cashmir*, and the expedition of Scylax, in which the monarch is known to have been greatly interested², will account perhaps for a petty district being thus prominently noticed, while several of the chief provinces of the empire are omitted in the enumeration of the Satrapies.

𐎠𐎵𐎲 𐎠𐎥𐎲 𐎠𐎥𐎲 𐎠𐎥𐎲 𐎠𐎥𐎲 GADUTAVA, [Col. III., l. 65, p. 236,]

Gadyta. A district on the western frontiers of Arachosia, which may possibly be represented by the modern *Kaddah* on the *Khásh rúd*,* conterminous with Seistán. I do not think the name occurs in ancient geography, but the place was well known to

the Arabs under the title of جَدَّة *Jaddah*³, and appears to have been of some consequence in the third and fourth centuries of the Hejrah. It is mentioned in the inscriptions as the scene of an action between the Satrap of Arachosia and a rebel force which had been detached from Persis, and which had rallied after their first defeat at *Kápushkánish*.

𐎠𐎵𐎲 𐎠𐎥𐎲 𐎠𐎥𐎲 GARB. This root, which may perhaps with more propriety be written *Grab*, is identical with the Vedic गृभ *Gṛibh*, and may be compared with the Zend »𐬔𐬀𐬭𐬀 *Gerev*; Pers. گرن *Girif*; Icelandic *Gripa*; Ger. *Graben*; Eng. *grip*, *gripe*, *grab*.

¹ Plin., lib. VI., c. 16; Ptol., lib. VI., c. 12; Pomp. Mel., lib. I., c. 2, and Isidore of Charax, p. 7.

² Herod., lib. IV., c. 44.

³ Jaubert, in his Translation (p. 445) of Edrisi, reads incorrectly جرّة *Jarrah* or *Jarrat*. The town is mentioned by all the geographers, and was visited by Captain E. Conolly in 1839.

&c.¹ In the inscriptions we have the following verbal formations:—

AGARBÁYAM, [Col. II., l. 4, p. 214,] *Cepi*.

AGARBÁYA, [Col. II., l. 88, p. 226, &c.,] *Cepit*.

AGARBÁYATÁ, [Col. I., lines 42 and 43, p. 201, &c.,] *Potitus est*.

AGARBÁYA(YA?)TÁ, [Col. II., l. 73, p. 223,] *Captus est*.

Verbs of the tenth class in the Vedic dialect frequently, I believe, elongate the vowel of conjunction between the conjugational suffix and the root, instead of changing the radical vowel as in Sanskrit. In regard to this verb, at any rate, the Vedic conjugation is exactly similar to that of the old Persian, for गृभ् in the former dialect regularly makes गृभायति, and we have thus गृभाय in the 2nd pers. sing. imperat., अगृभायत् in the 3rd pers. act. imperf., and गृभायत् (without the augment) in the 3rd pers. middle imperfect².

With the two latter forms, then, must be compared the Cuneiform *agarbāya* and *agarbāyatā*, the personal termination being elided in the one instance as a silent consonant, and in the other the final vowel being elongated. *Agarbayatā*, as the 3rd pers. of the passive imperfect, is suspicious, for as we have seen the conjugational suffix to be retained in that voice in *akun(a)vayata*, we should expect to find *agarbāyayatā*, and the word being imperfect on the rock, that may very possibly, after all, be the true orthography³. On the other hand, the middle voice is certainly in some instances used with a passive sense, (compare *agaubatā*, "he was called,") and I therefore leave the reading in suspense⁴. I have written *garb* instead of *grab*, merely because the Cuneiform alphabet does not possess the Vedic ञ्, but as the root

¹ The Latin *rap-ia*, Finnish *Rawi*, Permian *Row*, &c., appear to be all cognate forms, with the mere loss of the initial. For Burnouf's remarks on the Zend *gērēv*, *gērēpta*, &c., see Yaçna, p. 460.

² I find the imper. *grihāya* in the Rig Veda, II. 91, s. 4. Rosen, also, gives the act imperf. *udagrihāyat* from the Schol. to Panini, 3. 1. 84, and Westergaard quotes for the mid. imp. without the augment *grihāyata*, vv. 104. 18. See Rig Ved. Spec., p. 180, and Adnot. to the same, p. 57. Westergaard's examples are in his Rad. Ling. Sans., p. 320.

³ See the Notes to the Text and translation of Col. II., l. 73.

⁴ It is possible, also, that the retention of the class suffix in the passive voice may not have been constant, and in that case *ya* would be the regular passive characteristic in *agarbāyatā*.

becomes यद् in the classical Sanskrit, and as the lengthening of the conjunctive vowel in the old Persian renders unnecessary any modification of the radical letters, I am by no means satisfied that the latter is not the true reading¹. The verb in the inscriptions usually has the signification of "taking," as applied to "taking a city," "taking a man prisoner," &c., but in some instances it may be more appropriately rendered by "*potior*," "to obtain" or "to become possessed of," a sense which is not given by Wilson to the Sanskrit यद्, but which appears from Westergaard to belong legitimately to the verb गृह्, as it is used in the Vedas². *Khshatrām agarbáyatá* can thus only signify "he gained possession of the empire," [Col. I., l. 42, 43,] and, I agree with Lassen in translating *imá dahyáva tyá adam agarbáyam*, "these are the countries of which I have become master," the Median translation employing in the latter passage the same verb which usually answers to 𐎧, "to possess."

𐎠𐎡𐎢 𐎣𐎤 𐎥𐎦 𐎧𐎨 𐎩𐎪 𐎫𐎬 𐎭𐎮 GARMAPADA-HYA, [Col. I., l. 42, p. 201,]

Garmapadis. The name of a month in the old Persian calendar, which no doubt belonged to the summer, as it must be compounded of गर्मे, "heat," and पद्, "a mark" or "sign¹." The Cuneiform *garma* has been preserved in the Persian گرم, and may be compared with the English *warm*. The original root, however, was no doubt the biliteral *Har*, which remains in the Arabic حر to the present day, which was the stem-word, (according to the phraseology of Gesenius,) both of the Hebrew חָרַר, and the Chaldee ܚܪܪ, both signifying "to burn," and

¹ Lassen reads *garb*, doubtless in consequence of the Zend change of 𐬔 into 𐬕, but if we suppose the vowel to have become a consonant as in Sanskrit, *gr* (𐎠𐎡𐎢 𐎣𐎤) will be a legitimate Cuneiform groupe; and the orthography of the Teutonic correspondents is certainly in favour of this reading.

² Rad. Ling. Sans., 𐎧. *oif*.

³ Inscript. No. 6, lines 16, 17, p. 293.

⁴ The term *garēm* also occurs in Zend. See the phrase "*nōit aokhtēm nōit garēmēm*," "of neither cold nor heat," quoted and examined by Burnouf in the Journ. Asiat. 4^{me} Ser., 4^{me} tom., p. 485.

which with a nasal augment gave birth, by a different modification of the initial aspirate, both to the Greek *θεμνός*, and to the Sans. *यम्ने*¹, thus, as I think, affording another link of connection between the languages of the Arian and Semitic families. The name occurs in the inscriptions merely in the gen. case, and by some rule which I do not understand, but which is uniform in its application to the months, the final vowel of the case-ending wants the usual elongation.

𐬀𐬎𐬎 𐬌𐬎 𐬀𐬎𐬎 𐬌𐬎 GASTÁ, [Insc. No. 6, line 57, 58, p. 310.]
 (with the negative particle) *Nunquam?* In the notes to the
 Inscription of Nakhsh-i-Rustam, I have compared *gastá* with
 the Persian گشته *gashta*, "having returned," and if it be
 really a participial form, I can discover no other possible cor-
 respondent. In the Median translation, however, the equivalent
 is certainly neither a participle nor gerund; for those forms
 always exhibit the labial termination of the Turkish. The Me-
 dian word appears to be an adverb, and the Persian *tá*, as I have
 already shown, is a regular adverbial suffix. I venture, there-
 fore, with some hesitation, to propose for *gastá* the reading of
 "ever," comparing *gas*³ with the Persian *giz*, in هرگز and trans-
 lating the phrase *haruvatiya gastá má thadaya*, "let it never perish
 from thee."

¹ The Indian grammarians are totally unable to explain the etymology of **चर्म**, for the verbal root of the Semites appears to have never been introduced into the Sanskrit.

² Anquetil, indeed, gives the actual term *gas* as the Pehlevi equivalent of *gáh* or *gah*, signifying "time," in Persian, and applied in the Parsi theogony to the particular parts of the day, or rather to the genii presiding over them; *hargis* is always used in Persian with a negation, but it can hardly include a negative particle within itself, the suffix *gis* being in fact evidently allied to *𐬔𐬀* and *𐬔𐬌*. I know not at the same time of any kindred term either in the Semitic or Arian languages. See Zend Avesta, tom. II., p. 514, and Yaçna, p. 178.

it reappears in the Pehlevi *Guobia*¹, "language," and either from it, or from a root गप्, which must have been of cognate origin, we have several English words, such as *gab*, *gabber*, *gibberish*, &c.²

The derivatives from *gub* which occur in the Inscriptions, are,—

GAUBAT(A)IYA, [Col. II., l. 21, p. 216, &c.,] *Dicitur—appellatur.*
AGAUBATÁ, [Col. I., l. 84, p. 211, &c.,] *Dictus, seu appellatus est.*

The latter form is the 3rd pers. sing. of the middle imperfect, but it is impossible to say from the orthography of the former (𑀭𑀢𑀭 coalescing equally with *a* and *i*), whether it may be the 3rd pers. sing. present of the active, or of the middle voice. As the verb however is in every instance used in a passive, or at any rate a reflective sense, (the best English translation being "to be called,") the conjugation is most probably restricted to the *átmanépadam* voice, and I give the optional reading accordingly of *taiya* for 𑀭𑀢𑀭 𑀭𑀢𑀭𑀢𑀭 in the 3rd pers. sing. of the present, to reproduce the Sanskrit ते, *té*. I have only to add, that the Cuneiform verb follows the first instead of the tenth class, and that the employment of 𑀭𑀢𑀭, instead of 𑀭𑀢𑀭𑀢𑀭, to express the radical guttural, affords sufficient evidence of the introduction of the *guna*, the former character requiring, I think, the vowel *a* as a necessary adjunct³.

¹ I take this word from Anquetil, tom. II., p. 515, but no doubt the orthography is disfigured, and I have failed to discover the term in the Bun Deesh.

² *Gab* is I believe a gypsy word answering to the Hindustani *Gap* (گپ), which again may come either from गुप् or गप्. *Gibberish*, also, has been compared with the Arab. جفر "*Jafr*," but with little show of probability; equally wild is Hyde's reference of the term to the Persian *Gabar* (گبر). See de Rel. Vet. Pers., p. 364, where the extracts from the Talmud, however, regarding the *Gabars* of Persia, are certainly very curious in showing the extreme antiquity of the title.

³ The *guna*, as it is well known, is applied to the radical vowel of verbs of the first class in Sanskrit throughout the special tenses, both in the active and middle voice.

death of Cambyses, and who is known in history as Smerdis Magus. I am not quite satisfied of the etymology of the name, but I imagine it must be equivalent to the Sans. गोमन्तः, "possessing herds;" the vowel of the affix being irregularly lengthened¹. In nothing is the Behistun Inscription more valuable than in the brief, but authentic account which it contains of the Magian usurpation, a period of history that has been strangely disfigured by Grecian annalists. Herodotus, is, perhaps, the nearest to the truth in his general account of the rebellion, but he falls into the extraordinary error of associating two brothers in the imposition, and he appears moreover to have been ignorant of the name of *Gomatus*². Ctesias³ again substitutes a Zend title, Σφενδαδάρης, *Spēntadāra*, "given to the holy one," for the proper name *Gaumāta*, and he is certainly wrong in supposing the Magian to have adopted the character of the son of Cyrus with the knowledge and approval of Cambyses; while Trogus Pompeius (who has, however, alone preserved the vernacular title of the impostor,) gives a still more distorted account of the transaction, and describes the Magian conspiracy and the murder of Smerdis, as occurring subsequently to the death of his elder brother⁴. We may hardly quarrel with Herodotus and Æschylus for giving to the Magus the names of Σμέρδης and Μάρδος, for he was no doubt generally known by the fictitious title of *Bardiya* which he had assumed⁵; but I am quite at a loss to explain the

¹ I prefer this explanation to a comparison of the name with गोमन्तः, for the nom. of that form would be गोमान्, the affix in मन्त appears to be exactly the Persian مند *mand*.

² He says indeed, expressly, (lib. III., c. 61,) that the Magian's own name was Smerdis, a circumstance which he seems to think assisted in the imposture, though it is not easy to see how.

³ For the account which Ctesias gives of the usurpation, see Phot. Bib., p. 112 and 113, Ed. Schott.

⁴ *Spēnta*, which is the Lithuanian *svēnta*, and I suspect the Latin *sanctus*, occurs in the name of *Spēntamán*, the ancestor of Zoroaster. Compare also the name of the Sogdian chief Σιτραμένης; and see Yaqna, p. 173.

⁵ For the account of Trogus Pompeius, see Justin, l. I., c. 9. This historian agrees in many circumstances with Herodotus, but still there is sufficient difference in the two accounts to show that he must have had access to independent authorities.

⁶ The various orthographies of this name will be examined under the head of *Bardiya*.

origin of the story of the two brothers, not a trace of which is to be found in the record of Darius; and I am equally perplexed to account for the *Παρισιθης* of Herodotus, or to understand how Trogus Pompeius, who was acquainted with the name of *Cometes*¹, should nevertheless have transferred the impersonation of the son of Cyrus to an imaginary confederate, *Oropastes*. The most singular hallucination, however, under which the Greeks laboured, and which Plato shared with Herodotus², was that the usurpation of the Magus was an attempt at the re-establishment of the Medes³; whereas, to all appearance the impostor was a native Persian⁴. His cause, at any rate, was first adopted in Persis, where affairs probably had become disorganized in consequence of the long continued absence of Cambyses, and it is stated by Darius as a matter of surprise, that "neither Persian, nor a Median, nor even one of the Achemenidæ, opposed him⁵." Further illustration I shall reserve for the chapter that I devote to history.

𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 𐬀𐬀𐬀 GAUSHÁ, [Col. II., l. 74, p. 223, and l. 89, p. 226,] *Aures*. The accusative plural of a noun in short *a* of the first declension, which is identical with the Zend 𐬀𐬀𐬀𐬀𐬀 or 𐬀𐬀𐬀𐬀𐬀 *gausha*⁶, and the Persian گوش *gush*, and which, derived from the root 𐬀𐬀𐬀, "to emit a sound," is cognate with the abstract noun 𐬀𐬀𐬀, "voice" or "sound." Burnouf not only considers the Gothic *haus-jan*, "to hear," and *aus-ô*, "an ear," together with the Greek *oûs*, (and I may add, the Latin *aus-culto*), to correspond etymologically, but also by the change of the *s* into

¹ The *Cometes* (I believe *Comates* is found in some MSS.) of Justin, is the *Patizithes* of Herodotus, and *Oropastes* represents *Smerdis*.

² See Herod., lib. III., cc. 65, 73, &c.; and Plato, *Op. II.*, p. 695.

³ Heeren assumes this as an established fact, on the authority of Herodotus and Plato. See *Researches*, &c., (Eng. Ed.), vol. I., p. 346.

⁴ It cannot be proved that *Pishiyá'uvádáyá*, the native country of the Magian, was in Persis; but it may be assumed with a very strong degree of probability. See hereafter in *voce*.

⁵ Compare throughout the 11th, 12th, and 13th paras. of Col. I. at Behistun.

⁶ The indifferent employment of 𐬀 and 𐬀 in this word affords, I think, another proof that they both represent the aspirated sibilant. Nevertheless, in writing Zend words in the Roman character, I usually follow Burnouf's system of orthography.

r, he compares the Latin *auris*, Germ. *horen*, *ohr*, (and of course all the European forms, *or-eïle*, *hear*, *ear*, &c.,) and by a further strengthening of the *r* into *d*, he includes even *aud-io*, *ôr-ôs*, &c¹. If this extensive comparison be admitted, the Semitic forms will likewise come into the catalogue; for we can hardly doubt of the connexion of *aud-io* with the Chaldean 𐤀𐤅𐤊, and this again, passing through the Arabic ʾاڤ, becomes the Hebrew ʾאֵן². In almost every case, indeed, if we strike off the supplementary Semitic augments, we obtain a biliteral base which can thus be connected with the Arian languages.

In *Gaushá* the final 𐬨 stands for 𐬨𐬀, and that the radical vowel is subjected to the *guna*, is supported by a comparison with the Zend and Sanskrit correspondents.

𐬨 g (with u).

𐬨 𐬨𐬀 𐬨𐬀 𐬨𐬀 𐬨𐬀 𐬨𐬀 GUDRUSH³, [Col. II., l. 65, p. 222,]

Gudrus. The name of a city of Media, where the arch-rebel Phraortes fought his last battle with Darius, and which may be conjectured to have been somewhere in the vicinity of the modern Casvín, as the Median chief, on his defeat, fled from Gudrush to Rhages, and was brought back from thence to Darius, at Ecbatana. I should wish to connect the name with that of the great Scythic tribe, of which, under the various titles of Cadrusi⁴, Γεδρώσοι⁵, and Καδούσιοι, we find extensive settlements to have anciently existed in the Paropamisian mountains, between Carmania

¹ See Yaçna, &c., p. 213, and sur l'Alph. Zend, p. cii., note 41. Here is a reference also to Bohlen de Orig. Ling. Zend, p. 4.

² Gesenius, however, who is fond of comparing cognate forms in the Semitic and Arian languages, does not venture on this relation. See Heb. Lex., p. 32.

³ The orthography of the name is remarkable in affording an example of the employment of 𐬨 instead of 𐬨 not in immediate connexion with the u, but in a groupe of which that vowel is the complement.

⁴ Pliny, lib. VI., c. 23.

⁵ The name of the province Gedrosia is variously written by the Greeks. See Cellarius, vol. II., p. 726.

and the Melas, and on the northern frontier of Media¹. The position, indeed, of the Media; Cadusians would be sufficiently applicable to the geographical indication afforded by the inscriptions regarding the site of Gudrush; for we may suppose a tribe which could bring 200,000 men into the field to have occupied the entire country between Atropatene, the Caspian, and Media Magna²; but on the other hand, the assimilation of the names is more apparent than real, the termination in Cadusii being probably an ethnic suffix, while that of Gudrush is the simple case-ending of the third declension, and I cannot pretend, therefore, to consider the identity as at all established. I can neither discover, I may add, any satisfactory etymology for the name³; nor if the proposed reference of Gudrush to the Cadusii be rejected, can I find any other representative for the Median city in the ancient geography of the province.

卐 ch.

卐 <<卐卐卐卐卐卐卐 CHAKHRIYÁ, [Col. I., l. 50, p. 204,] *Repugnaret*. I have been long in doubt, whether this term can be a reduplicate form of च्छ, or whether it may be derived from an independent root; nor, indeed, have I yet been able to make up my mind definitively on the subject. The word occurs in the following passage, "*Niya áha martiya - - - - - hya avam Gaumdtam tyam Magum khshatram ditam chakhriyá*," which

¹ I shall explain hereafter my reasons for connecting the Cadusii and Gedrosians, and for considering them of the Scythic rather than the Arian race.

² The Cadusians of Media, who are generally associated in Grecian history with the Sacæ, have been noticed in my remarks on the Median language in Chapter II., as well as in the Mem. on Ecbatana. See Journ. Royal Geog. Soc. vol. X., p. 126. They gave the name of قادوستان *Kádustán*, to the mountains of Tárím until comparatively modern times, and are represented at the present day by the large and ancient tribe of *Garús* گروس.

³ The only Sanskrit root that I can find is गृह्, "to lie," which will not give any suitable meaning.

⁴ See commencement of the 13th paragraph of Col. I., at Behistun.

may perhaps be rendered, "there was not a man who would dispossess, (lit. "make dispossessed,") that Gomatus the Magian of the empire¹," or, as I think preferable, (*ditam* being the participle of वि), "there was not a man who would act against that Gomates the Magian possessing the empire." Under either of these interpretations *chakhriyá* would be derived from कृ; but I am not certain that the root will bear such an application as "to act against²," and I have sometimes, therefore, conjectured that the old Persian may have possessed a compound root, *chakhra*, allied to the Sans. कृ, "to resist" or "oppose," *chakhriyá* being the 3rd person of the present potential. Leaving, then, this question to be settled by better Orientalists, I will merely observe, that if *chakhriyá* for *chakhriyat* come from कृ, and my own opinion, I confess, is in favour of the identification, it must be regarded as the 3rd pers. sing. of the reduplicate perfect of the potential or subjunctive mood, being in fact a precisely analogous form to the *sasriyát* which has been found by Westergaard in the Vedas³.

𐎠𐎥𐎧𐎡𐎹𐎶𐎠𐎥𐎧𐎡𐎹𐎶𐎠𐎥𐎧𐎡𐎹𐎶𐎠𐎥𐎧𐎡𐎹𐎶 CHARTANIYA, [Beh. Passim,] *Instruens, instruentes*. The phrase *hamar(a)nam chartaniya* occurs repeatedly in the inscriptions, but I am not sure whether it should be translated, "joining battle," or "setting the battle in order;" for the Sanskrit root कृ with which I compare the Cuneiform

¹ In this view *ditam* for *dintam* must come from a root *din*, "to take away from," and the initial in *adiná* will be the simple augment of past time. I doubt, however, if the old Persian idiom will admit of a causal signification being given by the employment of कृ as an auxiliary verb.

² Westergaard, however, gives the periphrastic meanings of "*pugnare*," and "*vi uti*," which are tolerably applicable, and with प्रति, "*resistere*." In Sanskrit with the meaning "to hurt" or "injure," कृ is of the fifth class, and cannot therefore be compared. See Wilson, p. 240, and Rad. Ling. Sans., pp. 58 and 61.

³ I do not find this term in Westergaard's Radices, but am indebted for it to a note in Bopp's Comp. Gram., s. 709, where, however, it is referred to the intensive form rather than to the potential mood.

chart, merely signifies "to bind" or "tie together." Most probably, however, the allusion is to "arranging" or "joining" the ranks preparatory to battle, as *hamar(a)nam akunava*, "they fought an action," usually follows. I have not met with a similar term either in Zend or Pehlevi; but the Persian *چارادر* *charrad*, which signifies "a fray" or "battle," may perhaps preserve the original idea.

The termination in *aniya* must not be compared with the Sanskrit *अनीय*, which forms the future perfect participle. It is rather, I think, the ending of the present participle, or of a gerund which represents the present participle, in the language of the inscriptions, and I perceive therein a marked, and to me an almost inexplicable, difference from all other tongues of the same family. The only conjectural explanation indeed that I can give of so anomalous a form, and which moreover presents the peculiarity of being independent of inflexion, (*chartaniya* answering to the nominative equally of the sing. and plur. number) is that it is compounded of the regular participial ending in *an*, and of the suffix in *ya*, which gives the indeclinable preter participle of the Sanskrit. In the Median inscriptions, *chartaniya* seems to be replaced by a Turkish gerund, and this form of the verb equally answers to the past participle in the correspondent for *hagamata*.

¶ ¶¶ CHA, [Col. I., lines 65, 66, p. 205, &c.] *Que*. A particle used as an affix of conjunction, and (except in regard to its enclitic power,) answering to the Sans. *च*; Zend *𐬵𐬀*; Gr. *και*; Latin *que*, &c. It undoubtedly comes from the same interrogative base *ká'*, which has produced *kash-chiya* and *ká'*; for while in Sanskrit, in old Persian, and in Zend, the guttural and palatal are used indifferently in expressing the various derivatives from

¹ Bopp's remarks on the interrogative bases are contained in the Comp. Gr., from s. 386 to s. 403.

² I suspect even the Semitic *Q* to be of cognate origin, though the significations which it has taken have followed a different direction of development. As Gesenius in explaining *Q* compares the Latin *qui*, he must be of the same opinion, though he fails to notice the connexion. See Heb. Lex., p. 456.

the bases *ka*, *ki*, *ku*, the entire series of cognate terms is written in Latin with *qu*, and in modern Persian with چ *ch*¹; the elongation of the *a* in this term must be considered a mere peculiarity of orthography, and is entirely devoid of grammatical import; the particle also occurs in the composition of *hachá*, "from."

𐎧 𐎧 𐎧 𐎧𐎶 𐎶𐎵 𐎧 𐎶𐎵 CHICHAKHRÁISH², [Col. II., l. 9, p. 215,] *Sisacris*, (gen. case). The orthography of this name may perhaps be considered an additional reason for believing in the existence of a root *chakhra*, which may have produced the potential *chakhriyá*; for it certainly appears to be formed (like *Dadrashish* from 𐎧𐎶𐎵,) by the addition of the suffix in *i* to the reiterative form of such a verb³; and the signification of "the opposer" would be suitable enough to a proper name. Were such an etymology however to be admitted, there would still be some difficulty in accounting for the employment of 𐎧 in the reduplicate syllable⁴, and I do not give the explanation therefore with much confidence. The name is applied in the inscriptions to the father of the Persian Chief, *Martiya*, who headed the second Susian revolt, and it is interesting in affording an example of the employment of the *guna* in the case-ending of the genitive of a theme in *i*. The affix in *i* being added to *Chichakhra*, the form is obtained of *Chichakhraish* in the nom., and it is only by the addition of the *guna*, before the case-ending of the genitive, that the *á* could be elongated⁵.

¹ I say this advisedly, for the relative 𐎧𐎶, and even the interrogative 𐎧𐎶𐎵, "when?" come from the sibilant 𐎧, passing through an aspirate. 𐎶

² In the Cuneiform text this name is erroneously written *Chichikhraish*.

³ The Sanskrit, however, employs the middle, instead of the active voice, in reduplicate names of this class.

⁴ The substitution of *i* for *a* in the reduplicate syllable is, however, not unusual in Sanskrit and Zend, and is still more frequent in Greek. See Comp. Gr., s. 482.

⁵ The Sanskrit is, I believe, deficient in themes in *i*, but after the analogy of those in *i*, the nom. should certainly end in 𐎶𐎵, and the gen. in 𐎶𐎵𐎶; while themes in *á* (= *au*) should on the same principle end in 𐎶𐎵𐎶 and 𐎶𐎵𐎶𐎶, instead of in 𐎶𐎵𐎶 and 𐎶𐎵𐎶, which is exactly reversing the application of the *guna*.

𐎠 𐎠 𐎠𐎠 𐎠𐎠 CHITÁ, [Col. II., l. 48, p. 220, and l. 63, p. 222,] *Tamdiu*, or *Aliquamdiu*. In translating the second column at Behistun, where this term occurs in two different passages¹, I have conjectured it to represent a preposition governing the accus. case, and I have even sought to compare it with the Persian جدا *jiddá*, "separate" or "apart from;" further consideration, however, compels me to abandon this explanation; for in the phrase, *chitá mám amánayá*, I find that the Median certainly employs the personal pronoun as the object of the verb; a construction, indeed, which might have been presumed in the Persian from the causal form of the root, and the transitive application that should thus belong to it; *mám amánayá* is, I think, "he expected me" or "waited for me²," and *chitá*, therefore, must be explained as an independent term. Now I observe in the Median that there is no equivalent whatever for *chitá*; a single adverb expresses the relation of time, and it is almost certain therefore that *chitá* and *yátá* must be a relative and co-relative, the former being of little or no consequence to the sense. In this view, then, I suppose *chitá* to be an adverb formed from the interrogative base *ki*, (modified to *chi*,) with the same temporal suffix that we have in *yátá*, "until," and *thakatá*, "then," and I translate it by "some-time," or "so long," considering *yátá*, "until," to be its necessary and definite complement³.

𐎠 𐎠 𐎠𐎠 <𐎠𐎠 𐎠𐎠

CHITRATAKHM-A, [Col. II., l. 79, p. 226,] *Sitratachmes*.

CHITRATAKHM-AM, [Col. II., l. 88, p. 226,] *Sitratachmem*.

CHITRATAKHM-Á, [Col. II., l. 86, p. 226,] *Sitratachme*.

The proper name of a Sagartian Chief, who headed a revolt of his tribe against Darius, laying claim to independent sway in

¹ In line 28, Col. II, where I have also hazarded the restoration of *chitá* as a postposition, I now propose to read simply *mám amánayá*, "he waited for me," which, indeed, agrees better with the blank space on the rock.

² "To expect," indeed, is the link which connect^s the significations of "minding" and "remaining," that appertain to the several developments of the root *man*, in Zend, Persian, Greek, and Latin.

³ The neuter particle *chiya* for *chit*, from the same interrogative base, is also used with an indefinite sense, and we may further compare *chish* for *his*, *chiya* for *kiya*, &c.

virtue of his supposed descent from Cyaxares¹. The term may, I think, be translated with some confidence "of a powerful race," for the elements of which it is composed are sufficiently well known to us through the Zend. That the first element, indeed, must be compared with the Zend *𐬀𐬭𐬀*, "race," "seed," rather than with the Sanskrit *चित्र*, "variegated," is proved by the expression *Ariya, Ariya chitrā*, "an Arian (and) of Arian descent," in the inscription of Nakhsh-i-Rustam, where the Median uses for *chitrā* the same equivalent *chissa*, which also occurs in the Median orthography of the name of *Chitratakhma*². I shall consider this term further under its own head, and will here therefore merely observe of the second element, that it has an exact correspondent in the Zend *𐬀𐬭𐬀𐬭𐬀* *takhma*, which is always rendered in Sanskrit by *balishtha* or *dridha*, "very strong" or "powerful," and which Burnouf accordingly derives from *𐬭𐬀*, "to carry" with the suffix in *ma*, the guttural being aspirated by an orthographical law as the first member of a compound articulation. We must be careful, I may add, not to confound this word *takhma* with the Persian *تخم* *tukhm*, "seed," for the latter term occurs in the inscriptions under the form of *tau'má*, being derived perhaps from a root answering to the Sanskrit *तृ*; and the guttural which appears in the Persian correspondent, as well as in the Zend *𐬀𐬭𐬀𐬭𐬀*, "an off-shoot," is developed from the inherent aspirative power of the vowel *u*. With the latter term also must, I think, be certainly compared the second portion of the name of *Τερτρούχμης*³, and probably the same word, signifying "seed," is found in the *Τριταρταλχμης* of

¹ For remarks on the connexion of the Medes and Sagartians, see under the head *Asagarta*.

² From *chitra*, "variegated," we have both *chitar*, "the spotted leopard," and *chit*, the English "*chitra*," from its variegated patterns.

³ See notes to Inscription No. 6, lines 14, 15, p. 293.

⁴ See *Yaçna*, p. 40, for a detailed examination of this word; it is very commonly employed in Zend.

⁵ This will be explained more fully under the head *Tau'má*.

⁶ Or *Περτρούχμης* in Ctesias. See Phot. Bib., Col. 128.

Herodotus¹, and in the "Χοτράχνης of Æschylus, although in these two last examples the change of the vowel is, to say the least of it, suspicious.

The name of *Chitratakhma* is not, I believe, to be found in any Greek author, but it would regularly in that language be written Ζαρπαράχνης. In the Median and Babylonian, however, the orthography is strangely disfigured, (*Chissa'ankhwa* in the one, and perhaps *Sija'ankhma* in the other,) and if therefore the Greeks had taken the pronunciation from either of those sources, they might omit the dental of *takhma*².

The noun is regularly declined as a masculine theme in short *a*, and the terminations above given are those of the nom., the accus., and the instrumental cases.

𐎠𐎠𐎠 CHITRA, [Ins. No. 6, line 14, 15, p. 292,] *E stirpe*, or *ortus, satus*. I compare this term immediately with the Zend 𐬵𐬀𐬵𐬀 *chithra*, which certainly signifies "race," or "seed," but for which I have never yet seen any satisfactory etymology³. Remembering, however, the tendency to interchange between the palatal and guttural which we have seen in the derivatives from the interrogative bases, I am inclined to refer *chitra* to the root *kit*, 𐬵𐬀𐬵𐬀, "to dwell" or "abide," the idea of a "race" or "family," being bound up with that of its residence in a particular spot. The term has survived in modern Persian only in the name of *Minucheher* 𐭌𐭎𐭕𐭕𐭕; but as that epithet, signifying

¹ Lib. VII., p. 32. *Teri* and *Tritan* are certainly proper names, and a term implying "descent" would seem therefore to be the most suitable suffix; but I know not the meaning of "Yr in Hystechmes.

² The omission of this radical dental letter in the Median and Babylonian, has sometimes led me to suspect that the 𐎠𐎠 and 𐎠𐎠 might coalesce in the Persian pronunciation of the name; but such an amalgamation seems to be etymologically impossible. The nasal developement before the guttural is a striking characteristic of language, which the Median and Babylonian possess in common.

³ I think I have seen some remarks by Burnouf on the Zend *chithra*, but I cannot now refer to the passage.

⁴ De Sacy has some good remarks on *Minucheher* in his *Persian Antiquities*, p. 93, sqq. I strongly suspect, however, that *minu* is the Indian 𑂦𑂰 with the change of the *r* into *n*.

"heaven-descended," was adapted by the early Sassanians as one of their royal titles, we are fortunately enabled in the Parthian and Pehlevi forms to trace the intermediate orthographical changes; these changes moreover are of particular interest, for they show that, instead of the process of degradation following the natural course of time, the Parthians employed the same corrupted orthography as the modern Persians¹; while the Sassanians reproduced the true ancient form. We have thus for the Cuneiform *chitra*, the Zend , and Sassanian  *chatri*, and  *chatli*²; but in Parthian,  *chihra* exactly answers to the Pehlevi  and Persian , which again by the Arabs, to whom the palatal was unknown, was further degraded into  *shahar*. It only remains to consider whether *chitra* may be more properly regarded as an adjective or a noun. In Zend, *chithra* is certainly of the latter class, but in *Manuchatri*, "heaven-descended," and in *Ariya chitra*, "of Arian descent," it would seem to be an adjective; and I therefore compare the form with the Sans.  from , which, although rightly a noun, is optionally convertible to an attributive⁴.

 CHIYAKARMA, [Insc. No. 6, l. 39, p. 298,] *Quicquid agendum*. The prefix which occurs in this compound has been long to me a source of perplexity, and the comparison which I now venture to establish between it and the Sanskrit  is hardly satisfactory. Supposing, however, that *chiya-karma* answered to , it would signify "quantum agendum," and the phrase "*yathá mām káma ákṣa yadipatiya maniyádhyā tya chiyakarma*," might still be translated almost as I have before given it: "Ut mihi in votis erat siquidem," (or per-

¹ I take the Parthian form from the bilingual inscription in the cave of Hajiabad.

² *Chatri* at Nakhsh-i-Rustam and generally on the coins; but *chatli* at Kermansháh. De Sacy writes *tchetri*, to bring the term into nearer connexion with the Zend.

³ See Müller's Pehlevi Essay, in the Journ. Asiat., for April, 1839, p. 345.

⁴ See Wilson's Dict., *in voce*, p. 661.

haps "quamdiu") "observes quicquid agendum." Of one thing at any rate I am convinced, that *chiyakarma* is not the 1st pers. of a reduplicate aorist, as is conjectured by Lassen and Westergaard¹, nor indeed any reduplicate form of कृ, but that the prefix comes from the interrogative base *ki*, and that the said prefix is united to a neuter noun, answering to the Sans. कस्मिन्, which makes its nom. and accus. in कस्मै. The complement or co-relative to *chiyakarma*, which occurs immediately afterwards as *patikarma*, places the identity of the noun, I think, beyond dispute; and whether the prefix *chiya*, therefore, may give a definite or indefinite signification to the idea of "action" or "conduct" to be observed, I do not regard as of much consequence².

॥ ॥ २२ ॥ ॥ १८

CHISHCHIYA, [Col. I., l. 53, p. 204.] *Quisque*.

CHIYA, [Passim.] - - - *que, quid*.

These are masculine and neuter forms proceeding from the interrogative base *ki*. *Chish* is the true nominative masculine which exists in the Vedic माचिः and नाचिः, as well as in the Zend ماچیس *máchis*, and नाचिस naéchis, and which is absolutely identical with the Latin "quis³." Professor Bopp, I believe, first identified the Vedic pronoun which had been lost by the grammarians, (*mákir* and *nákir* being classed among the indeclinables); and if the corroborative proofs afforded by the Zend and by the Sanskrit itself, (*mákim* and *nákim* occurring in the accusative) had been insufficient to confirm the discovery, the

¹ Lassen supposes *chiyakarma* to be substituted for *achikaram*. See Ueber die Keilinschrift, p. 105, and Westergaard in his Median Memoir, although he correctly identifies the correspondent, does not attempt to alter the translation. See the Copenhagen Memoir, p. 383.

² It appears to me, indeed, that there is the same relation in regard to action between *chiyakarma* and *patikarma*, as I have already remarked between *chitá* and *yátá*, in regard to time; *chi* or *chiya*, from the interrogative base *ki*, seems to give an indefinite sense, which requires afterwards to be brought out and individualized by a definite complement.

³ See Comp. Gr., ss. 390 and 398, for some excellent remarks on this pronoun; also Burnouf's Yagna, Notes, &c., p. 142, where the value of Bopp's discovery is fully admitted.

verification would at any rate have been completed by the Cuneiform *chishchiya*, where the nom. occurs without the disfigurement of a prefixed particle¹.

Chiya, also, is the neuter form of the same pronoun, which, after the analogy of the masc. nom. and accus. should have been found in Sanskrit as *किन्*, but which in reality has been altered to *चिन्*, a form that has also been preserved in the Zend *چین*, and in the Latin "quid." But although *chiya* (or *chit*) was certainly in its origin a neuter pronoun², it came to be used in Sanskrit, in Zend, and in old Persian, exclusively as an indefinite affix, and in this sense it is represented by the Latin *que*, in *quisque*, *uterque*, &c.³ I have repeatedly alluded to its enclitical power, and I will here therefore merely give a list of the words in which it is found. These are *chishchiya*, "every one," *kashchiya*, "any one," *hauvachiya*, "such a one," *avashchiya*, "such as that," *aniyashchiya*, "else or other," and a compound tense *paruvamachiya*, which probably signifies "in the time before me;" the power of the suffix in every instance being to give an indefinite signification to the preceding word.

𐎠𐎡𐎴𐎠𐎡𐎴

CHISHPAISH, [Detach. Ins. A, l. 8, p. 261,] *Teispes*.

CHISHPAISH, { Col. I., line 5, 6, p. 196, } *Teispis*,

CHISHPAISHAHYA, { Detach. Ins. A, l. 8, p. 261, } (gen. sing).

There is equal difficulty in ascertaining the etymology of this name, which is applied to the son of Achæmenes, and in identifying the class to which it belongs. I suspect, however, that *chish* (or perhaps *chaish*,) may be for the Sanskrit *केश*, "hair," the

¹ The nom. masc. would no doubt present the orthography of *chish* in the inscription without the addition of the enclitic *chiya*, for the sibilant case-ending is preserved after the vowel *i*.

² The orthographical change of *chit* into *chiya* has been repeatedly explained, and does not affect the grammatical question in any way.

³ For remarks on the very ancient neuter in *t* or *d*, (compare *इत्*, "*id*," *चिन्*, "*quid*," &c.), see Comp. Gr., s. 157.

⁴ "*Que*," as the indefinite suffix, is probably a weakening of "*quid*;" as the copulative adjunct it comes from a different base, *ka*.

sibilant being aspirated by the power of the *i*; and that the second element may come from पा, "to nourish," with the attributive suffix in *i*, and the elongation of the *a* being suppressed'. In this view it will be a regular theme in *ai*, and the genitive *Chishpáish* will be formed by the introduction of a *guna* before the case-ending, as I have already explained in *Chichakhráish*. The Median form, also, which ends in silent *s*, and the Greek orthography of Τεῖσπης², are in favour of such an identification; but if it be admitted, we must convict the engravers at Behistun, not only of error, but of ignorance. Supposing, in fact, *Chishpáish* to be the true genitive, we must not only believe the nom. to have been accidentally omitted in the genealogical series on the great tablet, but we must further regard the forms on the detached tablet, where the artist has evidently considered the name to be of the first declension, and which he has accordingly written *Chishpisha* and *Chishpishahyá*, as the barbarism of an ignorant workman.

 $\neg \vdash j$, (with a).

-IK EY N̄ I< M I> N̄ I< JADYÁMIYA, [Ins. No. 6,
l. 54, p. 308, and Ins. No. 3, l. 21, p. 275,] Oro. I have formerly
considered this word as the regular 1st pers. sing. present of हृ
conjugated according to the third class; but as such an expla-
nation will not account for the interposition of iy between the
root and the personal ending³, and as it also seems impossible, if

1 There are certainly many cognate derivatives in Sanskrit which are used as proper names; comp. केशव, केशिन्, &c.; but as केश becomes کیش *gis* in Persian, its relation to the Cuneiform *chish* must be very doubtful.

³ I conjecture from a comparison of two passages in Herodotus, lib. I., c. 3, and lib. VII., c. 2, that Teispes, the son of Achæmenes, was the father both of Ariaramnes the grandfather of Hystaspes, and of the mother of Cambyses, father of Cyrus the Great. Xerxes, in fact, in recounting his genealogy, evidently traces up the maternal as well as the paternal line to Teispes; he applies to Cambyses, father of Cyrus the Great, the expression *τοῦ Τεισπείας*, but we know that the real father of that Cambyses was named Cyrus, and the allusion therefore would seem to be to his mother, who was the daughter of Teispes.

^a The conjecture which I have formerly hazarded in comparing *jadigámiya* with *जहानि*, that the *i* may be employed to give vocalization to the *𑂔𑂩𑂰*, and

the Devanagari aspirate were replaced by a Cuneiform dental, that the palatal could be still used as the letter of reduplication¹, I am now compelled to seek for some other etymology.

Remembering, then, the tendency of the Sanskrit gutturals to subside into Cuneiform palatals of the same grade, of which we have seen numerous examples in the substitution of 𐎧 *ch*, for 𐎣, I venture to compare *jad* with the Sanskrit गन्ध, "to ask" or "beg". If this identification, however, be correct, we must suppose the verb in the old Persian to have been of the fourth rather than of the tenth conjugation; for in the first place the radical vowel is not elongated, and secondly, although *diya* in the inscriptions would legitimately stand for 𐎠 owing to the repugnance of the language to compound letters, it could hardly replace 𐎠𐎠; the less, indeed, as we have an undoubted example of the 1st pers. sing. present of the tenth class in *dārayāmiya*, where the conjugational suffix is used precisely as it is in Sanskrit, without the euphonic *i* preceding it². The elongation, also, of the *a* before the personal-ending, which is likewise common to the Zend and Sanskrit, is another source of difficulty so far as regards its grammatical explanation; where we have *āhya* in the 2nd, and *ātiya* in the 3rd person, I have supposed the employment of the subjunctive rather than the indicative mood; but

that the *y* may be the vowel of connexion, cannot certainly be maintained; for the 𐎧 and 𐎠𐎠 represent the same dental power, and the substitution of the latter for the former must be owing to the previous existence of the *i*, which, indeed, should thus either be a radical letter, or at any rate the representative of some definite grammatical power.

¹ The interchange of *d* and *h* in roots, also, must always be suspicious, for the Devanagari aspirate is the degradation rather than the type of the Cuneiform dental; that it is not unknown, however, is shown by the root गृह्, "to hide," which is 𐎧𐎠 *gus*, in Zend, and *gud* in the inscriptions.

² An objection, however, occurs to this assimilation in the retention of the guttural under its proper form, in the Persian 𐎧𐎠 *gadā*, "a beggar."

³ I have already indeed observed, that the suffixes of the fourth and tenth conjugations appear to be everywhere distinguished, *iya* standing for 𐎠, and *aya* for 𐎠𐎠.

jadyániya and *dḍrayániya* are unquestionably forms of the indicative present, and we may perhaps therefore refer the employment of the long *a* in these terms, to the immediate derivation of the personal ending from the substantive verb rather than from a pronominal suffix. This, however, is, I confess, a most obscure point of grammar, which I have neither the inclination nor the requisite knowledge to discuss¹.

In line 21 of Insc. No. 3, Westergaard would appear to have *jadyániya* instead of *jadyániya*, but I doubt the correctness of his copy. If, however, the former reading be the true one, the verb is used in the imperative instead of in the present.

𐎠𐎵 𐎠𐎶 JAN. A root answering to the Sanskrit हन्, and Zend 𐎠𐎶 *jan* or 𐎠𐎶 *zan*, from which we have in the inscriptions the following derivatives:—

JADIYA, [Col. III., l. 15, p. 230, &c., &c.,] *Debella*.

JATÁ, [Col. II., l. 21, p. 216, l. 84, p. 226, &c.,] *Debellate*.

AJANAM, [Col. I., l. 89, p. 211, l. 95, p. 213, &c.,] *Profligavi—debellavi*.

AJA, [Passim,] *Profligavit—debellavit*.

JATÁ, [Col. IV., l. 58, p. 251, l. 78, p. 256,] *Hostis—debellator*.

Jadiya and *jatá* are the regular forms of the 2nd person of the imperative singular and plural of a verb of the second class, the Sanskrit correspondents being जहि and हत. *Jadiya*, however, must not be compared immediately with जहि², but rather

¹ Bopp (Comp. Gr., s. 434,) considers this lengthening of the class-vowel in the 1st pers. as an orthographical effect of the *m* or *v* which follows; but I cannot help thinking that as the Vedic ending *ámasi*, (Zend *ámahi*) for the 1st pers. plur. of the present tense of the active voice is evidently a contraction of the substantive verb *asmasi*, (the original form of *smasi*,) (Bopp, however, (s. 439) derives the Vedic *smasi* from the dependent pronoun *sma*,) so *ámi* in the sing. must also come from *asmi*. For the plur.-endings, see an excellent note in Burnouf's Yaçna, Notes et Eclair., p. 70.

² The identity of the initial letter indeed is accidental, for the Cuneiform 𐎠𐎵 is a radical letter, which is used in every form of the verb; whereas the 𐎠𐎵 in जहि is a euphonic substitute: *handhi* by the lapse of the nasal has become in the first place *hadhi*; the dental being no longer supported by a preceding consonant has then been softened to an aspirate, giving the form of *hahi*, and to avoid the itera-

with the primitive form which must once have existed of हन्ति¹, and in the same way *jatā* will stand for a primitive हन्. I have explained the forms of *aja* and *ajanam*, which represent the 3rd and 1st persons singular of the active imperfect under the head *avāja*, and I have shown that they stand for the Sanskrit primitive forms अहन् and अहन्ते, the former of which in the modern language has become अहन्, owing to the inadmissibility of a compound letter as a silent terminal², but which in the old Persian must have had the form of *ajat* before it was contracted into *aja*.

The term *jatā*, which occurs as a noun in the eleventh and seventeenth paragraphs of the fourth column at Behistun, must be the nom. of हन्, which is formed with the *unādi* affix of agency from the same root हन्. It probably, however, in the old Persian signifies "an enemy," rather than "a murderer" or "slayer," as in Sanskrit. In the other forms the root has the regular acceptation of "defeating" or "subduing".

From the various orthographies employed to express this root, we see that the sonant palatal, equally with the sonant dental, was the intermediate stage by which the Devanagari aspirate passed into the modern *z*; for the Cuneiform *jan* stands half-way between the Sanskrit *han*, and the Persian 𐎵 *zan*, "strike," and the two forms even of 𐎶𐎵 and 𐎶𐎵, were co-existent in the Zend⁴.

Several compounds also from this root are found in the inscriptions. I have already explained *avāja* and *avājanam*,

tion, the initial aspirate has been, by a last process of degradation, converted to its reduplicate correspondent.

¹ In the Vedas the termination in ह्य is preserved in some roots of the second general class without any reference to the preceding letter being a vowel or a consonant; but the mutilated form of *hi* is also extant. In Zend and old Persian, however, the employment of the primitive dental is constant and uniform. See Comp. Gr., s. 450, and Rosen's Rig Veda, Adnotat., p. viii.

² See Bopp's Comp. Gr., ss. 94 and 461.

³ Westergaard (Rad. Ling. Sans., p. 199) gives examples of the root हन्, with the meaning of "dejacere," "vincere," "destruere," &c.

⁴ For examples of *jaiñti* and *jata* from the root *zan*, see Yaçna, Alph. Zend, p. 71.

which have the signification of "slaying." *Frájanam*, the 1st pers. sing. of an active imperfect, answering to the Sanskrit *प्राहन्*¹, likewise occurs at Behistun, Col. II., lines 74 and 89, with the meaning of "I cut off," and the most natural explanation of the doubtful word *patiyajata*, (Ins. No. 6, l. 47,) would be to consider it as the 3rd pers. sing. of the middle imperf. of the same root preceded by the particle *प्रति*, the *y* in that case being required to connect the vowel *i* with the temporal augment. I shall examine *patiyajata*, however, at greater length in its proper alphabetical place.

-<= (j with i).

-<= 𐎧 𐎡 𐎧= 𐎢 Jivá, [Col. IV., l. 56, p. 250, and l. 75, p. 254,]

Vivas. I consider this term to be the imperfect subjunctive in the 2nd pers. sing., the correspondent of which in the Vedic dialect would be *जीवाः*²; from the root *जीव्*, "to live." The observation, also, that I have previously made in my notes to the 10th paragraph, Col. IV., at Behistun, stating that the 2nd pers. sing. of the imperative would present the same orthography, requires, I think, to be modified; for as the language of the inscriptions did not distinguish between long and short vowels, it is probable that the radical vowels *i* and *u* were affected by the *guna* in the special tenses of all roots of the first conjugation, and that the imper. form of *jiv*, therefore, would be written

-< 𐎧 𐎡 𐎧= 𐎢 *jaivá*. It is moreover in perfect accordance with the genius of the Zend to employ the imperfect of the subjunctive with an optative present signification³, and the term

¹ I am not sure, however, that this form is ever used. Westergaard gives *प्राचानि* for the passive aorist with the substitution of *प्र* for *हन्*, which as Wilson (Dict., p. 968,) remarks, takes place in most of the inflexions and derivatives of the Sanskrit root.

² Bopp has some brief remarks on the imperfect subjunctive of the Vedas in the Comp. Gr., s. 714.

³ Burnouf gives a great number of examples of the subjunctive imperf. in Zend, in an admirable note to the Yagna, marked S, p. 148; and the signification is uniformly that of the optative or subjunctive present.

biyá, which occurs in the 3rd pers. in apposition with *jivá*, at Behistun, can only be of that mood and tense, for the terminations of the 3rd pers. of the imper. are in the old Persian *tuva*, in the active, and *tám* in the middle voice. In Zend, the palatal of the root जीव् appears to have been hardened in some forms to an aspirate, for we have in the Vendidad (Fargard XVIII.) 𐬨𐬀𐬯𐬭𐬀 𐬔𐬭𐬀𐬵𐬀 *darēghō gava*, "long-lived", whilst in the modern Persian زیستن *zīstan*, "to live," it has been softened to a sibilant.

𐬔𐬀𐬵𐬀 𐬨𐬀𐬯𐬭𐬀 JIVAHYÁ, [Col. V., line 20, 21, p. 259, and l. 36 p. 260.] *Vitae?* We have probably in this word the genitive case of जीवः, "life," but the passages in which it occurs are too much mutilated to admit of the signification being verified.

𐬔𐬀𐬵𐬀 t.

𐬔𐬀𐬵𐬀 𐬔𐬀𐬵𐬀 𐬔𐬀𐬵𐬀 𐬔𐬀𐬵𐬀 TAK(A)BARÁ, [Insc. No. 6, l. 29, p. 294,] *Tacabri*. An ethnic title occurring in the geographical list at Nakhsh-i-Rustam, and which I am inclined to identify as that which gave its modern name to *Tabaristán*². The *Tabaris*, however, of Oriental history, are always supposed to have derived their title from تَبر *tabar*, "an axe", the favourite

¹ See Vendidad, Bomb. lithographed edition, p. 482. I take the meaning of *darēghō gava* from Burnouf. (See Yaçna, p. 533, note 386.) The Zend, however, retains a purer form, as in 𐬔𐬭𐬀𐬵𐬀, "living," from 𐬔𐬭𐬀𐬵𐬀; while the guttural obtains in the Lithuanian *gywa*, and the Goth. *quiv*; from the latter, also, Bopp derives the Latin *viv*, and he supposes even the Greek ζῶν and βίος to be of cognate origin. See Comp. Gr., Eng. Ed., vol. I., p. 119.

² There is an excellent article in Yākūt's Lexicon, on the origin of the name of *Tabaristán*, written by the Arabs طبرستان.

³ See particularly for this derivation the *Tārikh-i-Tabaristán*, Pers. M.S. The axe was not only the national weapon of the Scythians, but was especially used by the Caspian tribes to clear away the forests for their habitations.

weapon of the Caspian foresters, and I know not exactly how to assimilate this etymology with the Cuneiform term. The last element, indeed, in the compound *Tak(a)bará* would seem to be a verbal affix, and I should rather translate the name "the axe-bearers," (*Taka*, "an axe," from 𐎧𐎠𐎢𐎡 , "to cut" or "hew"¹?), or perhaps, "the wood-cutters." (Compare the Persian تخت بر *takht bur*².)

Another question of some interest is to consider whether the *Tároupoi* or *Tarıpoi* of the Greeks really represent this tribe. Undoubtedly the *Tapuri*, in the course of their migration from Scythia to Media, inhabited at one time the Caspian provinces³, and as the *Bun Dehesh* has preserved the orthography of *Taprastán* in describing these provinces, it is possible that there may be a connexion between the names; but in that case we must distinguish, I think, the *Tak(a)bará* of the inscriptions from the *Tabaris* of Persian history; for the Greek reading of *Tároupoi* is too constant to admit of much doubt as to the pronunciation of the name under the Parthians, and I know not of any orthographical law that could have led to the absorption of the long vowel. It would be more reasonable to suppose that we have a trace of the name of the *Tak(a)bará* in the *Tάμβρακα* or *Tάμβραξ* of Polybius⁴, which was one of the chief cities of Hyrcania; for the Babylonian employs, I think, the nasal *ñ* in the place of the guttural⁵ in expressing the title in question; and as the nasal, also, was legi-

¹ تیشہ *Tishah*, and تبر *tabar*, in Persian, are both evidently connected with the root 𐎧𐎠𐎢𐎡 , but I know not exactly how the latter is formed.

² *Takht* or *takhtah*, however, is properly the participle 𐎧𐎠𐎢𐎡 , "cut" or "fashioned."

³ For the various seats of the Tapyri, see the authorities in Cellarius, tom. II., pp. 665, 756, and 707. As they are not mentioned among the Caspian tribes, either by Herodotus or Ctesias, I conclude that their immigration from Scythia occurred under the Parthians. Perhaps, however, the *Tibareni* of Asia Minor were a kindred race, who had moved earlier to the west.

⁴ $\text{Κεῖσθαι οὐ μακρὰν τῆς Τάμβρακος}$. Lib. X., c. 28.

⁵ In Westergaard's Babylonian copy of the Nakhsh-i-Rustam Inscription, the name is difficult to be recognized, owing to the epithet applied to the preceding *yund*, and to the mutilation of the distinctive sign 𐎶 . I read it, however, *Tañpara*. The Babylonian, indeed, thus constantly uses the same letter for a nasal and a guttural.

timately interchangeable with the *l*, there would be no objection to recognize the same name in the *Ταλαβρόκα* of Strabo¹, the final syllable in both of these Greek forms being the Scythic affix of locality.

I will only add, that the final *á*, standing for the Sanskrit *आ*, marks the nom. plur. masc., and that I place the *a* of the first element of the compound in a parenthesis, to admit of the possible contraction of *Takbar* into *Tabar*.

𑀭𑀮𑀳𑀺 𑀭𑀮𑀳𑀺 𑀭𑀮𑀳𑀺 𑀭𑀮𑀳𑀺 TACHARAM, [Insc. No. 2, l. 6, p. 271.] *Sculpturam*. The Cuneiform root *tach*, from which this term must be derived, should, I think, correspond more regularly with *तक्* than with *तश्*; for the Devanagari gutturals, as we know, have a general tendency to subside in the old Persian into palatals of the same grade. It is very possible, however, that the two Sanskrit roots, although signifying respectively “to bear,” and “to cut” or “carve,” may be of cognate origin, for there is much difficulty in distinguishing in Zend between the derivatives of *𑀭𑀮𑀳𑀺 tak*, and *𑀭𑀮𑀳𑀺 tas*, which answer to *तक्* and *तश्*, and in Greek, also, *τάσσω* and *τεύχω* are connected both in sense and sound². The Cuneiform *takhma* which occurs in *Chitratakhma* can only be translated “strong” or “powerful,” and the adjective certainly comes from the root *tak*, “to bear;” yet, in the name of *Tak(a)bará*, the same root would appear to have the signification of *taksh*, “to cut” or “carve.” On the other hand, *tacharam* or *tachram*, formed with the *unadi* affix in *रक्* from *tach*, will more suitably denote “a sculpture” than “a work;” while the 1st pers. of the middle aorist *hamatakhshiya*, which must also be derived, I think, from *tach*, (as *अपयिषि* from *पय्*.) certainly signifies “I laboured³.” In the compound *us(a)tashandm*, also,

¹ See lib. XI., p. 350. Strabo, however, names the capital *Τάνη*, a title which may be perhaps of kindred origin.

² Burnouf has some excellent remarks on the analogy and distinction between the various derivatives in Zend from the Sanskrit roots *tak* and *taksh*, in his Commentary on the Yajna, pp. 143, 168, and 299.

³ We must remember, also, that *takhsha* in Pali became *takka* by a law of

where *tashan* appears to represent the Zend 𐬔𐬀𐬎𐬌𐬀 , the meaning of "skilfully made" and "skilfully sculptured" will be equally applicable, and from this general confusion, therefore, between the acceptations in which the root is to be taken, I infer a common origin for the ideas of "bearing" or "labouring," and of "fashioning" or "carving;" and I suppose the difference between the Cuneiform *tak* and *tach* to be of the same character as that which we have seen in the varying orthography of the interrogative bases.

𐬔𐬀𐬎𐬌𐬀 𐬔𐬀𐬎𐬌𐬀 𐬔𐬀𐬎𐬌𐬀 TARS. A root answering to the Sans. तर्स्, Zend 𐬔𐬀𐬎𐬌𐬀 *tērēs*, and Persian ترس *tars*. It is however, I suspect, like many other of the supposed stem-words of the Sanskrit, a compound, or at any rate an augmented root, for the primary element *tra* would appear to be cognate with दृ *dri*, which has the same signification of "fearing" or "being afraid." Compare the Gr. $\tau\rho\acute{\epsilon}\omega$, $\tau\rho\acute{\epsilon}\text{-}\mu\omega$, Latin *ter-reo*, *tre-mo*, *trepido*, Eng. "dread," "tremble," &c. The verb in the inscriptions, as in Sanskrit, is of the first class, and occurs under the following forms:—

TARSATIYA, [Insc. No. 3, l. 11, 12, p. 274,] *Timet*.

TARSAM, [Insc. No. 4, l. 21, p. 282,] *Timeam*.

ATARSA, [Col. I., l. 50, 51, p. 204, Insc. No. 4, l. 9, p. 279,] *T'imuit*.

The original Sanskrit root answering to the Cuneiform *tars* should, I think, be तर्श्¹; for in the first place we must expect in both languages to see the radical vowel affected with the *guna* in the

orthography. Hence, 𐬔𐬀𐬎𐬌𐬀 , or *Takkasila*, for the Sans. तक्षशिल; as also, 𐬔𐬀𐬎𐬌𐬀 became *Pukkala*, (Gr. Πεύκαλα), and 𐬔𐬀𐬎𐬌𐬀 became *Turukka*, the true original of Τούρκ or تُرك *Turk*, for I pay no respect whatever to the fabulous derivation from *Thu-kiü*, "a helmet."

¹ तर्श् it must be remembered in Sans. would be an impossible orthography, the vowel ऋ necessarily aspirating the following dental sibilant; and it is on this account, I imagine, that roots in ऋ invariably change the radical vowel ऋ to the homogeneous consonant ऌ .

special tenses; and secondly, if *tras* had been a primary form it would have been expressed before the vowel *a* in the inscriptions, according to the laws of orthographical change, by *thrah*. *Tarsa-tiya*, in the 3rd pers. sing. of the pres., therefore, must be compared with a primitive तर्शति rather than with चसति, (which in the old Persian would give the form of *thrahatiya*.) and the 1st and 3rd persons of the imperfect, *tarsam* and *atarsa*, will answer to तर्शे and अतर्शेत्, instead of the modern forms of चसं and अचसत्. *Tarsam*, I must add, which has lost its augment of past time in consequence of being preceded by the interdictory particle *má*, will perhaps orthographically represent the 1st pers. sing. of the aorist¹, as well as of the imperf., and if we followed the idiom of the classical Sanskrit, where the aorist is alone used with the particle *má*, to express "dissuasion," without reference to time, we should be inclined, therefore, to accept of the former explanation; but in the Vedas, it must be remembered, the imperfect is employed in the same manner with equal frequency²; and as Vedic analogy is, I think, usually to be preferred to that of the classical Sanskrit in illustrating the old Persian grammar, there can accordingly be no objection to consider *atarsa* and *tarsam* to belong to the regular imperfect of the active voice. Whichever be the tense employed, the translation of *má tarsam* will be the same, "*ne timeam*," "let me not fear."

𐎠𐎡𐎢𐎣𐎤𐎥𐎦𐎧𐎨𐎩𐎪𐎫𐎬𐎭𐎮𐎯𐎰𐎱𐎲𐎳𐎴𐎵𐎶𐎷𐎸𐎹𐎺𐎻𐎼𐎽𐎾𐎿 TÁRVÁ, [Col. III., l. 22, p. 231,] *Tarba*. The name of a city in the district of *Yutiyá*, which appears under Darius to have been one of the divisions of Persis proper. It may possibly be identical with *Tapováva*, which is placed by Ptolemy in the western frontier of Carmania, and which again may derive its title from the river named by the same author *Δάρα*, but

¹ Compare the 1st pers. sing. of the aorist, अदर्शे, from the root दृश्, "to see."

² Lassen, indeed, (Ueber die Keilinschriften, p. 247,) says that the imperfect is also used in the classical Sanskrit without the augment after the particle *má*, but Wilkins, s. 1310, restricts the employment of the tense in that shape to where it appears in composition with नास्म. If Bopp be right in identifying the augment with the privative *a*, (see Comp. Gr., s. 537, sqq.) it may be dropped in these positions to avoid a double negation.

by Pliny *Daras*. Etymologically, also, I should wish to compound the name of the Sans. $\pi\tau\tau$, "clear," and वः , "water",¹ perhaps even it would be less objectionable to compare *Tárvá* with the modern *Dáráb-jird*, then to refer the latter term to a corruption of the name of Darius².

𐎲𐎠𐎧𐎡𐎴𐎠𐎧𐎡𐎴 TIGRA, [Col. II., l. 39, p. 219,] *Tigra*. The name of an Armenian fort, which may possibly be the same as the *Τρυπάρα* of Ptolemy, placed by that geographer in the vicinity of the Cyrus or Kúr³, but which more probably took its title from the river Tigris, on the upper course of which it was situated. I shall examine the etymology of the term under the following head, and will merely therefore add, that in expressing the name, the Median exactly reproduces the Persian orthography.

𐎲𐎠𐎧𐎡𐎴𐎠𐎧𐎡𐎴 TIGRÁ-M, [Col. I., ls. 85 and 88, p. 211 and Col. V., l. 23, p. 259,] *Tigrídem*. This is the accusative case of *Tigrá*, under which orthography the ancient Persians represented the name of the Tigris. According to the consentient testimony of Greek and Latin authors, the term signifying in the old Persian language "an arrow," was applied to the river in consequence of the rapidity of its current⁴. I have little hesitation, therefore, in deriving *Tigrá* from तिज् , *tij*, "to sharpen,"

¹ *Vas* would be written *vá* in the Cuneiform, as वः has become *ká*.

² For remarks on the Persian دآراب *Dáráb*, see under the head *Dár(a)-yavush*.

³ Lib. VI., c. 2. Agathodæmon's map places *Tigrana* upon the Cyrus; and it may be presumed, that in common with *Τρυπανόκετρα* and *Τρυπανάμα*, the city took its name from King Tigranes; but whether under this title we are to understand (with Strabo, Appian, and Plutarch,) the famous opponent of Lucullus, or whether we are to ascribe the above-named cities to that more ancient monarch of Armenia, the Tigranes who is mentioned by Xenophon in the *Cyropædia*, and who, according to the native tradition, vanquished the Median King Astyages, must remain a doubtful question. St. Martin has collected all the authorities on the subject in his *Armenian Researches*, tom. I., p. 173.

⁴ Among other authorities, see Strabo, l. XI., p. 529, Pliny, lib. VI., c. 27, and Q. Curtius, lib. III., &c. The notices of the ancients have been collected by Wahl, *Pers. Reich.*, p. 709.

either with the *unadi* affix in تیر , or, as it is more probably a feminine adjective, with the attributive ت , and it is no doubt the same term which has been softened in modern Persian into *tir*¹. The root تیر , indeed, has given birth to a great number of cognate derivatives; compare Sanskrit *tigma*, "sharp," where the same hardening has taken place of the palatal to a guttural; Arm. Տէգ *teg*, "a javelin," Pers. تبع *tigh*, "a blade," تیز *tiz*, "sharp," "quick," &c. I prefer at the same time considering *tigra* in its primitive form to have been an adjective, (signifying "sharp" or "rapid," and thus equally applicable to "an arrow" and to "the river,") rather than the abstract name of an object², from observing the attributive etymology of the *Ufrdtaush* or Euphrates, and from finding also that the Arian nations, when the original name of the Tigris had been so corrupted by Semitic orthographical changes as to be no longer distinguished in its pristine sense, reproduced from another root a synonymous epithet, by which, in their sacred books, the river in question alone continued to be known. This epithet, *Arvand*, unquestionably signifies "rapid," and that under its Pehlevi corruption of *Arg* or *Arang*, it was especially employed to denote the Tigris, is shown by the direct testimony of *Hamzeh* of *Isfahán*, who says, that in his day, even the *Dijleh* of the Arabs was known to the Persians as the ارنگ رود *Arang rud*, and the كودك دريا *Kudak darya*, ("little sea".)

¹ For these affixes, see Wilkins, s. 874, and s. 913.

² The softening of the old *tr* into *r* in modern Persian is very frequent, but the only other example that I remember of *gr* becoming *r* is in the modern *Zár* for the ancient *Záypos*.

³ See Preface to Whiston's *Mos. Chorenensis*, p. v.

⁴ It has been often remarked, that the names of objects are in fact in almost every instance adjectives, being derived from the quality which the object embodies.

⁵ *Arvand* does not occur in Zend as the name of a river, but it is found in the Pazend hymn to the Amshaspands. See Anquetil's *Zend Avesta*, tom. II., p. 78.

⁶ Burnouf has some elaborate remarks on the etymology of *Arvand*, in the *Yaçna*, p. 248, and he discusses the connexion between *Arvand* and *Arg*, in his notes to the same work, p. 181; but the evidence of *Hamzeh*, an excellent Persian scholar, who lived at the end of the fourth century of the Hijreh, and whom I quote from *Yakút's Lex.*, in voce *Dijleh*, is conclusive against Burnouf's attempted iden-

Under the head 'Ufrátauwá, I have noted the important inference to be drawn from our finding the names of the two great rivers of Mesopotamia to be of genuine Arian etymology. An Arian must, I think, have preceded a Semitic colonization of *Shinár*; and the antiquity of the primitive colonists may be judged of from the fact of the vernacular *Tigra* having been corrupted by their successors to *Dekel*, as early as the time of Moses. Gesenius has availed himself of some apocryphal Zend and Pehlevi forms, which he writes *Tedsherem* and *Tedshera*, but which are certainly unknown as geographical titles in any part of the Zend Avesta, to distinguish the Greek *Týppis* and the Hebrew *Hiddekel* הידקל. The latter he appears to regard as an independent title employed especially by the Jews, while he derives immediately from the spurious *Tedshera*, not only the Greek *Týppis*, but the Chaldee ܬܕܫܪܐ, the Syriac ܬܕܫܪܐ, and the Arabic دجلة; but this is certainly a false distinction. Most other critics are agreed that the initial syllable in *Hiddekel* is a redundant prefix¹, and that the form which remains after the elision of this prefix is identical with the modern *Dijleh*. The change, indeed, from *Tigra* to *Dikel* or *Dijleh*, is in perfect accordance with the Semitic usage of expressing Arian names, and it dates probably from the first Semitic occupation of *Shinár*. Pliny, as it is well known, has preserved the double form of *Tigris* and *Diglito* as applying to the same river, and I may add,

tification of the *Arg* of the Bun Dehesh with the Jaxartes. It is curious, at the same time, that I find in my copy of the Bun Dehesh, which is a very correct manuscript, the name of the river in question invariably written *Arvand*, and not *Arg*; the latter, indeed, which is the uniform orthography employed by Anquetil; being, I suspect, the Parsi corruption of the Pehlevi and Pazend term. This latter form, still further altered to *Arang*, is used as I have said by Hamzeh, while Firdousi, (Ed. Mac., tom. I., p. 39), in speaking of the Tigris, continues to employ the old orthography of آروند *Arvand*. There is a good note on the *Arg rúd* of the Bun Dehesh, in Sprenger's *Massoudi*, tom. I., p. 243.

¹ See Gesenius' Lex., Eng. Ed., p. 321.

² Onkelos and Jonathan write הידקל, exactly like the Arab. دجلة.

³ Gesenius considers the ה as a peculiar Hebrew prefix; while Morinus regards it as a radical, which was frequently elided by the Chaldees and Syrians. All the Greek and Latin authorities regarding the derivation and meaning of the name are collected by Morinus in his *Treatise*, p. 26, prefixed to Bochart's *Phalex*.

between the names¹, and that it must possess a geographical import, a circumstance which is indicated by its appropriate juxtaposition in the list of Satrapies with the titles of Babylon and Assyria, is confirmed, I think, by our finding the name of the Tigris, under its own proper form, employed to illustrate the expedition which was undertaken by Darius in person against the tribe in question, and which is recorded in the mutilated supplementary 5th Column at Behistun².

There is also another very important circumstance which throws a light upon this interesting colony. Herodotus particularly notices the high cap of the Sacæ³; upon the triumphal tablet at Behistun, the Scythian leader, Sakukha, is thus distinguished by the national head-dress⁴. We may, I think, indeed presume, that wherever we find this peculiar conical cap, the Scythic race is depicted, and it becomes accordingly of the highest interest to observe that on the sculptured slabs of Nimrud, the high-capped warriors are apparently exhibited under two distinct social phases. On the outer walls, which seem to have been constructed out of the debris of some prior edifice⁵, they are represented as vanquished enemies. In the interior of the palace, where the sculpture may be supposed to be of a later date, they appear as the triumphant followers of the king. The inference then is obvious, that the southern capital of Assyria was at some period or other reduced by the Scythians, and that it remained for a considerable time in their hands; and if we were to follow exclusively the authority of Herodotus, we might be

¹ This Median construction, indeed, is particularly remarkable, for it is so unusual in Persian to employ an isolated noun and adjective in apposition, that I should not otherwise have ventured to connect the names.

² Westergaard on the contrary, translates *Tigrakhudá*, "Lords of the arrow" or "archers," having in view apparently the analogous names of the *Saranacæ* (from *Saran*, "the moon" or "a bow," Mongol,) the *Comani* (from the Pers.

کمان, "a bow") or "the nation of the archers," by which title the Armenian geographer Vartan designates the Turks.—See St. Martin's *Armenia*, tom. II., p. 439.

³ The words of Herod. are, Σάκαι δὲ οἱ Σκύθαι περὶ μὲν τῇσι κεφαλῇσι κυρβασίας ἐς δὲ ἀπτεγμέναις ὀρθὰς εἶχον πεπηγυίας. See lib. VII., c. 64.

⁴ He is the only figure on the rock, it must be remembered, who has the conical or high-pointed cap.

⁵ This is rendered probable by the circumstance of the blocks being laid one upon the other to form a wall, without any reference to the continuity or even the direction of the sculpture.

TAUMÁYÁ, (locat.,) [Col. I., l. 45, p. 203,] *Genere.*

* In former passages I have derived *taumá* from the Sautra root तृ, which has produced the तृविष: "strength," of the Vedas, the Pers. توانا, توان, &c., denoting "ability;" but I now think that तृ, which is also a Sautra root, both orthographically and etymologically offers a preferable explanation; for examples of similar derivations, see Wilkins, s. 867.

denote "a race" or "family," precisely in the same manner as the Cuneiform *taumá*. I strongly suspect, also, that the Latin *stemma* applied to "a line" or "pedigree," is of cognate origin, for it appears impossible to derive that meaning from the Greek *στέφειν*, "to crown". Anquetil, it must be remembered, everywhere translates 𐎧𐎠𐎧𐎡𐎹 *takhma*, by "race" or "seed," identifying it evidently with the Persian *tukhm*, but M. Burnouf has well distinguished between the Zend *takhma* and *taokhma*, showing that the one is an adjective signifying "strong," and that the other, which is of rare occurrence, and which he translates "rejeton," must be derived from a different root¹. With the latter, no doubt then, is to be compared the Cuneiform *taumá*; but if, as I have before suggested², the same element is to be found in the Greek names of *Τεπιρούχμης*, *Ἀπρόχμης*, &c., the development of the guttural will be shown to be extremely ancient, and may perhaps support the theory of M. Burnouf, that the Zend and Persepolitan were co-existent languages³.

It is necessary, also, that I should make a few observations on the inflexions. Under the heads *Athurá* and *Arbirá*, I have proposed to compare *áyá*, as the locative case-ending of the old Persian, with the primitive *आयाः* of the Vedas, rather than with the corrupted *आयां* of the classical Sanskrit⁴. The same termination for the genitive of a feminine theme in long *á*, unquestionably stands also for *áyás*, which by a law of orthography becomes *áo* in Zend, with the shortening of the class vowel before the connecting *y*, (compare *निहायाः* = 𐎧𐎡𐎹𐎧𐎡𐎹𐎧𐎡𐎹⁵;) but it is not so easy to determine whether *taumáyá*, in the ablative, may stand for *taumáydt* or *taumáyás*. Professor Bopp has certainly shown

¹ This however is the derivation usually given by etymologists, who compare the Latin *stemma* with the Greek *στέμμα*.

² See Yaçna, p. 441, Note 296.

³ Under the head *Chitratakhma*.

⁴ This is assumed generally by Burnouf throughout his Commentary on the Yaçna as an established fact.

⁵ See the reference before given to Bopp's Comp. Gr., Eng. Ed., Note to p. 215.

⁶ See Bopp's Comp. Gr., s. 192, and the list of genitives in page 210, where he compares also the Greek and Latin feminines *χώρας* and *terrās*.

good ground for supposing the primitive and universal sign of the ablative to have been a dental¹, and *taumáyá*, therefore, may be as well compared with a form like the Zend *dahmayát*, as with the शिवायाः of the classical Sanskrit; yet, on the other hand, as we have in the inscriptions the termination in *auš* for the genitive and ablative of masc. themes in *u*², exactly answering to the Sanskrit औः, and opposed to the Zend distinction between *eus* and *abí* (or *eut*³) for the corresponding cases, it is safer, I think, to believe that the corruption of the ablative dental to a sibilant under certain conditions had taken place previously to the separation of the old Persian from the Sanskrit stock; and thus, although I compare the masc. abl. *kárá* with *kárá*, I prefer regarding the feminine *taumáyá* as a contraction of *taumáyás*.

𐭠𐭡𐭢 t (with u).

𐭠𐭡𐭢 𐭠𐭡𐭢 𐭠𐭡𐭢 𐭠𐭡𐭢

TUVAM, [Col. IV., l. 37, p. 245, l. 41, p. 246, l. 67 and 70, p. 253,]
Tu.

THUVÁM, [Col. IV., l. 43, p. 246, l. 53, p. 250, l. 74, p. 254, &c.,]
Te.

TAIYA, [Col. IV., l. 58, p. 251, ls. 75, 76, p. 255,] } Tibi.
TAYA, Col. IV., l. 58, p. 251, l. 79, p. 256,]

The true pronominal base of the 2nd person in the language of the inscriptions, as in all others of the same family, is *tu*, and in the nom. sing. it is combined with the so-called neuter termination in *am*, which also occurs in the Cuneiform pronouns *adam*,

¹ For a full examination of the ablative case-sign *t*, which is preserved universally in Zend, and occasionally in Sanskrit, see Comp. Gr., from s. 179 to s. 184. The *d* of the old Latin is a cognate form.

² Compare the gen. *Kuraush* and the abl. *Bábirauš*. There is no example in the inscriptions of the abl. of a theme in *i*, but the case-ending would doubtless be *aish*, like the gen. The only real difficulty with regard to the Cuneiform abl. arises from the term *Parvuyata*, which I shall examine in its proper alphabetical place.

³ Burnouf does not admit the Zend abl. in *abí* for themes in *u*; he considers the true case-ending to be *eut*, which certainly occurs in *mainyeut*. Whichever be the true form, however, the distinction between the abl. dental and the gen. sibilant will be equally marked. See Yaçna, Notes etclair., p. 8, foot-note 16.

vayam, *iyam*, &c., and which is of an equally extensive application in Zend and Sanskrit¹. *Tuvam*, therefore, is for *tu + am*, and the 𐬭𐬀𐬎𐬌 is merely employed to connect the dissimilar vowels. The corresponding forms are in Sanskrit त्वं, in Zend 𐬭𐬀𐬎𐬌 *túm*, and in Boeotian Greek τοῖν.

In the accusative *thuvām*, on the other hand, the base is *thwa*, answering to the Sanskrit त्व, which, as Bopp has remarked, is the theme of the oblique cases², and the 𐬭𐬀𐬎𐬌 , therefore, can only be interposed in the old Persian for the sake of euphony, and to avoid a compound articulation. The termination in *ām*, also, is the accusative case-ending in *am*, coalescing with the short *a* of the base³. Compare the Sans. त्वां, Zend 𐬭𐬀𐬎𐬌 *thwām*, &c.

Taiya and *Taya* are used indifferently in the inscriptions for the suffix of the 2nd person. They exactly answer to the Sans. ते and Zend 𐬭𐬀𐬎𐬌, and are, I think, equally correct orthographics, the *y* in *taiya* being used to connect the *i* and *a*, and in *taya* being the direct substitute of the former vowel⁴. The forms of *mé*, *té*, *sé*, &c., are, according to Bopp, in their primary condition locatives, (*té* being a contraction of *twé*, for *twai*), with which corresponds the Zend 𐬭𐬀𐬎𐬌 *thwéi*), and it is owing to a grammatical artifice that they are substituted for datives⁵. In the few examples which occur in the inscriptions of *taiya* and *taya*, they are certainly, as in Sanskrit, used with a dative signification only; but judging from the analogous employment of the other personal suffixes *maiya* and *shaiya*, as well

¹ Compare *aham*, "I," *vayam*, "self," *ayam*, "this," *vayam*, "we," *yuyam*, "ye," &c.

² See Comp. Gr., s. 326.

³ As *má* and *twá* are used in Sans. equally with *mám* and *twám*, Bopp has suggested that the vowel has been lengthened to compensate for the rejection of the *m*, and that the abbreviated *má* has afterwards reacted on the more complete *mám*, and imparted to it the newly acquired quantity. See Comp. Gr., s. 326.

⁴ *Tai* is the exact orthographical equivalent of *té*, but the *i* cannot be used as a terminal in the old Persian, and hence the more developed form of *taiya*.

⁵ See Comp. Gr., s. 329. Compare also with *mé*, *té*, *sé*, the Latin datives, *mi-hi*, *ti-hi*, *si-hi*.

as from the actual application of the Zend tu , I believe that they would with equal propriety represent the genitive and instrumental cases, and that as a genitive they might even replace the possessive pronoun.

It is sufficiently remarkable, that there is not a single example in the inscriptions of the employment of the pronoun of the 2nd person in the plural number, although the object of address in more cases than one, is certainly a multitude, rather than an individual¹. Nevertheless, I cannot, on this negative evidence, suppose the language to have been deficient in a correspondent for tu or 𐎧𐎠𐎧𐎡𐎹 *yújhēm*, "ye." It is more probable, as the admonition or declaration always proceeds from the monarch, that the singular is used for the plural, to mark the inferiority of the parties addressed; and in the event of an inscription being ever found in which the king may address himself directly to the Gods, I should thus expect to find the pronoun in the plural number.

Under the head of *adam*, I have cursorily noticed the connexion which is shown by the pronoun of the 1st person to have existed between the early languages of the Arian and Semitic family. This connexion, however, is even more clearly marked in comparing the various terms employed to express the pronoun of the 2nd person. The true and universal sign of the 2nd person is *t*; in the Arian languages the dental has been united to the vowel *u*, and we have thus, Sanskrit *Tu-am* (तुं Twam,) Zend *Túm*; old Pers. *Tuvām*; modern Pers. تو tu ; Greek σύ sy ; Latin *tu*; Goth. "thū;" Germ. "du;" Eng. "thou," &c. In the Semitic languages on the other hand, the article *an*, which is optionally used in the Babylonian, and which unquestionably performs the same grammatical function² as the suffixed *am* of

¹ See particularly the address to the Persian race at Nakhsh-i-Rustam, (Ins. No. 6, l. 56,) where although *martiyá*, "the men," be used in the plur. vocative, the pronoun of the 2nd pers. (in *hauvataiya*), together with the verbs which form the complement of the phrase, are all placed in the sing.

² Bopp observes, (Comp. Gr., s. 348,) "That the pronouns in general are so strongly and vividly personified by themselves, that they are not in need of a very energetic and animated sign of personality; for which reason, although *aham*, *twam*, &c., have a termination, it is not that of the usual nominative, but they appear as neuters in the mere objective or accusative garb." I suspect, however, this so-called neuter termination to be absolutely identical with the prefixed Semitic article.

the Sanskrit, Cuneiform, and Zend, (compare *tuam*, *tuam*, and *túm*;) has been everywhere prefixed to the dental base, and the terminal vowels have been modified to admit of a distinction of gender. The Hebrew masc. תָּאָנִי; fem. תָּאָנִי (or properly תָּאָנִי,) no doubt, therefore, are contracted from *an-ta* and *an-ti*; as we have the Arab. m. ^{أَنْتَ} أنت; f. ^{أَنْتِ} انت; Copt. m. ^{ⲛⲟⲕ} nθok; f. ^{ⲛⲟ} nθo; Æthiopic, m. ^{አንተ} ānt; f. ^{አንተ} ānt; and Syriac, with the dormant *n*, m. ^{ܐܢܬܝ} ānt; f. ^{ܐܢܬܝ} ānt. The same pronominal dental occurs also in the 2nd pers. of all Semitic verbs, either prefixed or suffixed, and is likewise of a very general employment for a similar purpose throughout the Arian family of languages. Wherever, indeed, we have a sibilant in the termination of the 2nd pers. sing. of verbs in Sanskrit, Greek, and Latin, it must be considered a degradation of the primitive dental, (compare Gr. *τίς* or *σὺ*;) and of course the aspirate of the Zend and Cuneiform in corresponding terms, is a still later orthographical corruption².

𐎧𐎫 th.

𐎧𐎫 𐎧𐎫 𐎧𐎫 𐎧𐎫 THAKATÁ, [Behistun, Passim.] *Tunc. Thakata* must be compared with the Sanskrit तदा, with this difference however, that the former is derived from the compound pronoun तदा, rather than from the simple base *ta*, (neut. तद्,) and

¹ I take these Semitic forms from Gesenius Lex., (Eng. Ed., p. 116,) who has compared the dental bases, but who has failed to recognize the prefixed article, (which, however, occurs in the sing. and plur. of all Semitic pronouns of the 1st and 2nd pers.), or to identify it with the suffixed *am* of the Sanskrit and Zend.

² It must be remembered, however, that the application of the dental to the 2nd person is secondary, not primitive, for in its original condition, as a base, it is a demonstrative. In the derivation of the sibilant, (which in the Turkish languages is universally applied to the 2nd pers.) from the demonstrative dental, I follow Gesenius. See his note to תָּאָנִי in the Hebrew Lexicon.

³ The common use of the suffix *ka* in Sanskrit is to form a possessive, (comp. *māmaka*, "meus," *tavaka*, "tuus," and the Vedic *asmaka*, *yushmaka*, &c.) but Wilson defines the suffix in *taka* as a pleonasm; *ka* as a possessive, is no doubt, the original of the Hindustani *ká*, *kí*, *ké*, and is also cognate with the gen. case-ending in Turkish.

that, as the Cuneiform *da* represents the old Sanskrit locative suffix in *ह*, (compare *idd*, "here," for *इह*, *hadá* for *अह*, *avadá*, "there," &c.), the suffix in *दा*, which is used in Sanskrit to form adverbs of time, is necessarily in the inscriptions converted to *tá*. *Thakatá* is properly the correlative of *yátdá*, which again must be compared with *यदा*, but it is generally used in the inscriptions as a mere demonstrative adverb of time, referring to a preceding date. Its resemblance to the Latin *tunc* is, I think, in some degree accidental, for the adverbs *tunc* and *nunc* being derived from the pronominal bases *tu* and *nu*, the guttural terminations of those words must express the idea of time¹; whereas the temporal application being denoted in old Persian by the suffix in *tá*, the *ka* in *thakatá* can only be explained as the pleonastic कन् which also occurs in *तक*.

I will merely add, that the substitution of the Cuneiform *tha* for the Sans. *त*, exhibits the orthographical process by which, as I have before observed, the demonstrative dental ultimately subsides in many cases to a sibilant.

𐎧𐎡𐎹 𐎧𐎡𐎹 𐎧𐎡𐎹 𐎧𐎡𐎹 𐎧𐎡𐎹 THATAGUSH, [Col. I., l. 17, p. 197.] *Sat-taggydia*. The name of a Satrapy of Eastern Persia, which from its being mentioned in four different geographical lists between Khárisim and Arachosia, between Arachosia and Gadára, between the Sacæ and Arachosia, and between Margiana and the Sacæ², may be inferred to have included the whole extent of the Paropamisian mountains; being bounded by Candahar on the south, by Cabul on the east, by the valley of the Oxus on the north, and by Merv and Herát on the west. From the circumstance, moreover, of Margush, or Margiana, being everywhere omitted in the list of Satrapies, while a revolt, which in the descriptive part of the Behistun record, is especially referred to that province, is

¹ Bopp, although he explains the ablative locative adverbs, *hinc*, *istinc*, *illinc*, &c., omits to notice the suffix of time in *nunc* and *tunc*. This termination, however, is no doubt identical with *vika* in the Gr. correlatives *πη-vika*, *τη-vika*, *ή-vika*, and may be compared also with the endings in *doneo*, *donicum*. See Comp. Gr., ss. 352 and 424.

² See Ins. No. 4, par. 2, Ins. No. 6, par. 3, and Beh. Col. I., par. 6, and Col. II., par. 2.

made in another passage to include the inhabitants of Margush, Thatagush, and Saka¹, I should suppose the countries of Merv and of the Paropamisus to have been anciently very closely connected; the former, indeed, as far as political government was concerned, being dependent on the latter. There can be little doubt either, but that the *Sarrayûdai* of Herodotus, who are classed in his seventh Satrapy with the Gandarii, the Dadiœ, and the Aparytœ, represent the inhabitants of Thatagush, and as the Dadiœ in another passage of the same author are associated with the Gandarii in a common command, the latter, as I have before shown, dwelling on the banks of the Indus, there is additional reason for believing the province of Thatagush, which is mentioned in the inscriptions, to have extended over the entire mountain range². It is at the same time sufficiently singular that, while the geographical notices both of the Vendidad and of the Bun Dehesh, point to this particular country as the high place of the ancient Zoroastrians³, the name of Thatagush should still admit of so very little direct, or even conjectural illustration.

The Cuneiform  being a regular correspondent for the Devanagari श, the title may be presumed to be identical with the Sanskrit शतगुः, "possessed of a hundred cows⁴," and to have been given to the country in consequence of the abundance of horned-cattle which it pastured; but with the exception of the solitary notice of the *Sarrayûdai* in Herodotus, and the possible allusion to the same people in the Catace of the Peutinger

¹ Compare Beh. Col. III., par. 3, with Col. II., par. 2.

² Compare lib. III., c. 91, with lib. VII., c. 66; Rennell (Geog. of Her., vol. I., p. 390,) would confine this Satrapy to Margiana and the surrounding districts, but he was misled by his ignorance of the true position of the Gandarii; he does not attempt to identify the Sattagyde.

³ The province of Thatagush is probably represented in the Vendidad by Hætumat, being the region watered by the Helmand (or Etymander) and its tributaries; but I cannot venture to compare the names, notwithstanding that *th* is a legitimate correspondent for *h*, (comp. *mathishta* and महिष्ठ), and that the Median does actually employ an aspirate instead of a dental in expressing the Persian *Thatagush*. I entirely approve of Burnouf's analysis and illustration of Hætumat. See Yaçna, Notes et Ec., p. 93, sqq. The Paropamisian range in the Bun Dehesh is Mount Arparsin.

⁴ Wilson compares Satgerhi, but doubtfully, (see As. Res., vol. XV., p. 104.) If the Sâtacas of Wilford (As. Res., vol. VIII., p. 340,) be really found in a Sanskrit geographical series, the assimilation of the name to the Cuneiform Thatagush is probable.

gerian Tables, which is placed to the north of Drangiana, I know not of a single passage in Greek or Latin authors which can be supposed to preserve a trace of the ancient name. About the period, indeed, of the extinction of the Achæmenian monarchy, a tide of immigration appears to have set in from the eastward, which continued for many centuries in a series of waves to overflow the Paropamisian mountains, and which, as it discharged its shoals of population upon Eastern Persia, along the valleys of the rivers descending from the great range, obliterated the old territorial and ethnic land-marks, and caused the nomenclature of each tract to vary according to the shifting footsteps of the tribes. The Dadicæ of Herodotus were perhaps among the earliest of the immigrants. Pressed upon by the Sacæ, they followed along the course of the Helmand, Heri-rúd, and Murgh-áb, had reached the skirts of the mountains in the time of Ptolemy, who places Tatacene between Aria and Drangiana, and were subsequently distributed over the plains as Táts and Tájiks¹. The Sacæ in the same way, who were their successors, had given the name of *Σακασσηή* in the time of Isidore to the *Thatagush* of the inscriptions, but shortly afterwards they themselves were expelled by fresh colonists from the mountains, and permanently settled in Sagastán or Seistán, on the lower Helmand². I will not pretend at present to trace the steps of the multitudinous hordes who followed; the *Ζαόροι*, *Ίωροι*, *Κοζόλοι*, *Κορσοί*, and the hundred tribes who are mentioned by Chinese, Arabic, and Armenian authors³;

¹ The Tájiks are usually identified with the Dahæ, but I think wrongly. Throughout Eastern Persia, Tát and Tájik are synonymous terms applied to the agricultural peasantry in contradistinction to the pastoral and foreign nomades, and it is, I think, therefore, a fair induction to refer them to the *Δαδίκαι*, who colonized *Τατακήνη*; see Ptol., l. 6, c. 19. In Chinese history, indeed, a distinction is recognized between the Tahia or Dahæ and the Taio-chi or Tájiks.

² The *Σακασσηή* of Isidore, it must be remembered, is distinguished from Drangiana, and cannot therefore represent the Sagastán of Persian history. Its title of *Ίππαιρακήνη*, also, necessarily confines it to the mountains, and the names of several of its towns are, I believe, to be recognized in Oriental geography among the dependencies of Ghúr.

³ The Zaoiri and Iori are mentioned by Dionysius in his *Bassarica*, l. 26, v. 166, and perhaps the *Ξούθοι* of the same author may be referred to the inhabitants of *Thatagush*; I take the names of Kozol and Kors from the coins of Kadaphes and Kadphises; Khojeristán, or the country of the Kozols, is mentioned by Mos. Chor., and is the Khujestán of the Bun Dehesh. The name however is now lost, as is also that of Ghurhistán, but the positions on the Upper Murgháb and Helmand may be verified from the notices of the Arab geographers. I take this opportunity of remarking, that while Sanskrit and Chinese authorities have

that they were in many instances numerically strong, and of some political weight, may be inferred from the traces they have left of their names in Zabulistán, Khorassán (anciently Khoristán), Khojeristán, Ghurshistán, &c., but their ethnographical history is involved in much obscurity, and its discussion would be foreign moreover to the present argument, which merely aims at explaining the reason of the disappearance of the title of Thatagush from ancient as well as modern geography.

ॠ ॡ ॢ THADAYA, [Ins. No. 6, l. 58, p. 310,] (*Ne*) *pereat*.

I suppose the root *thad* to be identical with the Sans. शद्, "to perish," but if this assimilation be admitted we must consider the verb to be conjugated in the old Persian according to the tenth class, instead of following the first and sixth classes as in Sanskrit, for there can be no doubt but that the termination in *aya* is the conjugational suffix. I have already more than once alluded to the distinction between the suffixes in *iya* and *aya*, the one being employed for the fourth and the other for the tenth class; and I may add, in reference to *thadaya*, that the rule in Sanskrit which elongated the radical vowel *a* in the special tenses of roots of the latter class is not of universal application, and that *thad*, accordingly, may be compared with the Sanskrit conjugation of such roots as भक्ष्, "to eat;" कष्, "to tell;" गण्, "to count;" रह्, "to leave;" गद्, "to thunder, &c., in all of which the short *a* retains its primitive quantity throughout the special tenses. In *thadaya*, then, for *thadayat*, I suppose that we have the 3rd pers. sing. of the act. imperf. of *thad*, conjugated with the suffix in *aya*, and that the temporal augment is dropped after the interdictory particle *má*, in order to give the meaning of dissuasion without reference to time; *má thadaya* signifying "let it not perish," as I have already explained *má tarsam* to mean "let me not fear".

been exhausted in the illustration of Arianian ethnography, Pehlevi, Armenian, and Arabic sources of evidence have been almost wholly neglected; yet the Bug Deheh, Moses of Chorene, and the early Arabs have the most valuable notices, and their rigid examination is indispensable to a complete enquiry.

There is a difficulty however with regard to voice; Westergaard observes, that शद् is conjugated in the middle voice in the special tenses, and in the active

𐎧𐎠𐎹𐎡𐎹 THRAD(A), [Col. IV., l. 4, 5, p. 240, l. 41, p. 246, l. 45, p. 247, l. 52, p. 249, l. 60, p. 252,] *Perfectio*. In the notes appended to the second paragraph of the fourth column at Behistun, I have adverted to the extreme difficulty of rendering the phrase *hamahyāyā thrada*, so as to reconcile with its application to the context, the etymological import of the terms, and their various conditions of grammatical employment; and after much further consideration, and with the improved acquaintance with the old Persian language which I have acquired in compiling the present Vocabulary, I still find myself as incompetent as ever to deal with this obscure expression. As the Cuneiform 𐎧𐎠𐎹 replaces the palatal sibilant and the aspirate as well as the dental, *thrad(a)* might perhaps be orthographically compared with शरद्, "the autumn," or अत्, the particle of belief, or even with हृद्, "the mind," but I cannot obtain a suitable meaning from any of these equivalents, and I am obliged therefore to fall back upon the very doubtful derivation which I have before given from चद्, "to do" or "perform," conjecturing the name, which may signify "performance," to be a neuter in silent *d*, following the ninth class of the eighth declension of Wilkins¹.

in all the others, (Radices, p. 177,) and the signification moreover of *thadaya* in this passage is reflective and not transitive; but *asadayat* will represent in Sanskrit neither an imperfect nor an aorist in the middle voice, and I am doubtful therefore if we may not rather have a passive aorist, *thad(a)ya* being for *sadi*, as I shall presently show *athahya* in the same tense to be used for *asansi*. The signification also of "let it not be lost," would be equally applicable with "let it not perish."

¹ I was long inclined to translate *hamahyāyā thrada*, "true in every thing," supposing *thrada* to be the connecting orthographical link between "truth," and अत्, a term, which by another modification of the initial has also given rise to the Latin *cred-o*; but I found the grammatical application in some passages to present an insuperable difficulty. Another conjecture which has occurred to me is, that the allusion may be to the tri-lingual writing, *thrada* standing for त्रेधा, "in three ways;" but this explanation, also, I have on due consideration rejected. The Devanagari च त्रा, which occurs in चद्, is, as we know, generally represented in the inscriptions by 𐎧𐎡𐎹, but still the reading of *Mithra* and *Kshathrita* shows us that the Zend law of aspiration was also sometimes acknowledged, and there is no orthographical difficulty therefore in comparing 𐎧𐎠𐎹𐎡𐎹 with चद्.

If this explanation, however, (which is, I confess, to me anything but satisfactory) be admitted, we must of course read *thrad* instead of *thrada*, both in the nominative and accusative case, supposing the silent *d* to be preserved as a terminal where it is a radical letter, (compare also the nominatives *kauf* and *daraug*); and in Col. IV., line 45, where *thrada* would appear to be a genitive for *thradas*, we must further believe the old Persian theme to have differed from the Sanskrit in retaining the sonant dental in the oblique cases instead of converting it to a surd of the same class. I have so little confidence at the same time in the meaning which I have thus given to *hamahyáyá thrad(a)*, that I will abstain from any further attempt at illustration.

𐎧𐎫𐎧𐎠𐎹𐎡𐎹𐎠𐎧𐎫𐎧𐎠 THASTANIYA, [Col. I., l. 53, 54, p. 204.]

Stans, sistens. I have no great hesitation in identifying this word as the present participle, or the present gerund of a root answering to the Sanskrit 𑖦𑖯, the reduplicate letter, which in Sanskrit is the dental *t*, in Latin a sibilant, and in Greek and Zend an aspirate, (compare तिष्ठामि *sisto*, ἵστημι, and ἵσταμαι) being represented by the Cuneiform 𐎧𐎫𐎧𐎠, and thus supplying an important link in the chain of orthographical mutation. But, although, according to this explanation, the *thastaniya* of the inscriptions will be intermediate between the Sanskrit तिष्ठन् and the Latin *sistens*, it exhibits a purer form than is found in any of the cognate languages, in so far as it preserves unchanged the vowel of the reduplicate syllable¹. I have already noticed the peculiar ending of the words which represent the present participle in the old Persian, under the head *Chartaniya*, and I shall submit any observations that may be necessary regarding the employment of the root, when I come to consider the substantive *stānam*. It only remains therefore to add, that as the verbal formations in *aniya* are used in almost every instance in the

¹ Bopp (Comp. Gr., Eng. Ed., vol. I., p. 111.) assumes that the Sans. *tishthāmi* is a degradation of a primitive *tasthāmi*, and he explains the substitution of *i* for *a*, "on the ground that the reduplicative syllable, which is seeking generally for relief from weight, and therefore converting long into short vowels, may not mix up the heaviest among the short vowels with the weight derived from position." See Comp. Gr., s. 482, and for further remarks, s. 508.

inscriptions without the support of the substantive verb, they may perhaps be considered as independent gerunds of present time, rather than as *bonâ fide* participles.

𐎠𐎠𐎡𐎹 𐎠𐎠𐎡𐎹 THAH. A root which is certainly identical with the Sanskrit शस्, and the Zend 𐬵𐬀𐬵𐬀, "to say," and which by the strengthening of the aspirate to a guttural, (a change that occurs even in the Zend derivatives) has produced the Persian سخن *sukhn*, "speech;" the Germ. *sagen*; Scandinavian *saga*; Eng. "sing," "song," &c. The verb occurs in the inscriptions under the following forms:—

THÁTIYA, 3rd pers. sing. act. imperf. [passim,] *Dicit.*

ATHAHAM, 1st pers. sing. act. imperf. [passim,] *Dixi.*

ATHAHA, 3rd pers. sing. act. imperf. [passim,] *Dixit.*

THAHYÁMAHYA, 1st pers. plur. pres. passive, [Col. I., l. 7, p. 196,] *Appellamur.*

ATHAHYA, 3rd pers. sing. pass. aorist, [Col. I., l. 20, p. 198, l. 23, 24, p. 199,] *Dictum est.*

THÁ ----- (?) [Col. IV., l. 49, p. 247,] ----- (?)

THÁH ----- (?) [Col. IV., l. 58, p. 251,] *Commemoraberis?*

Thátiya for the 3rd pers. sing. of the act. present is undoubtedly an irregular form, so irregular indeed, that notwithstanding the uniform applicability of the meaning, "he says," we might still doubt its identity, did we not find that the Median translations at Behistun, substituting the present for the past, make use very frequently of a common term to express the Persian *thátiya* and *athaha*. Under what particular process the

¹ The usual Sanskrit form is शस्, and Wilson admits the signification of "speaking," only when the root is preceded by चाक. Westergaard, however, gives many examples of शस्, with the meaning of "telling" or "speaking," (see Rad. Ling. Sana., p. 312,) and Burnouf comparing 𐬵𐬀𐬵𐬀, (which, however, is generally written 𐬵𐬀𐬵𐬀) with the Sans. शस्, simply translates the root by the French "dire." See Yaçna, p. 29, where the Zend 𐬵𐬀𐬵𐬀 *cañh*, is also referred to the same root. Further remarks on the roots शस् and शस् are given by Burnouf in the Avant-propos to the Yaçna, p. 21.

radical *h* has been elided in the Cuneiform *thātiya*, I am unable to guess, but it is certainly owing to this elision that the *a* has been elongated (*tha+atiya* becoming *thātiya*); for the verb is of the first class, and I do not believe any other example is to be found of such an essential deviation from Sanskrit orthography¹.

Athaham and *athaha* for the 1st and 3rd persons singular of the act. imperf. are regularly formed, and represent the Sanskrit अशंस and अशंसत्.

For the 1st pers. plur. of the present passive, *thahyámahaya* is, perhaps, a more correct orthography than *thahyámahya*, as it is hardly probable that the additional *a* which is pre-inserted before the terminal *i* in the primary forms of the middle and passive voices in Sanskrit, Zend, and Greek², should have lapsed in the language of the inscriptions; and orthographically, indeed, although <𐎧𐎡𐎴> when it replaces स्य or सि, may be read with some confidence as *hya*³, yet as the substitute of हे (*hé=hai*), it must necessarily, I think, be pronounced with the fuller form of *haya*. In comparing *thahyámah(a)ya*, however, with शंस्यामहे *śansyámahe*, the most interesting thing is to observe the close affinity of the Sanskrit and the old Persian, and their common distinction from the Zend and Greek; the *y* which is appended to the root is of course the passive characteristic, and the class-syllable *a*, upon which it opens, is elongated, according to Bopp, by the weight of the following *m*⁴, but the personal termination *mahaya* or महे, it must be remembered, is not a primary but a secondary

¹ The elongation of the *a* is considered by Bopp in many cases to be equivalent to the *guna* of the other vowels, (*a+a* becoming *á* as *a+i* becomes *é* and *a+u* is equal to *ó*), and this *guna* is found in the old Persian forms of the pres. tense of the first class, such as *gaubataiya*, "it is called," *vainataiya*, "it is seen," *tar-satiya*, "he fears;" but at the same time, as the Sanskrit does not lengthen the radical short *a* in roots of the first class, neither can I suppose such a rule to have applied in the language of the inscriptions; the lengthening of the radical *a* in certain roots of the fourth class in Sanskrit, appears to be owing to the weight of the following *m*. I allude to the examples given by Wilkias, s. 248.

² See Bopp's excellent observations on this subject, *Comp. Gr.*, s. 466.

³ As in the genitive case-ending of the first declension, and the termination of the 2nd pers. sing. of the pres. tense of verbs.

⁴ Bopp's observation (s. 434) refers particularly to the elongation of the class-syllable *a* in the active voice, but is of course equally applicable to the middle and passive.

form¹, and hence the identity of the Cuneiform and Devanagari alphabetical power. Founding on the corresponding terminations, which are 𐎠𐎡𐎢𐎣 *maidhé*, in Zend, and *meta* in Greek, Professor Bopp, long ago, determined that the Sanskrit *महे* was a mutilation of *मधे*², and, although this is, I believe, the only instance in the inscriptions in which the Cuneiform 𐎠𐎡 will be thus found to replace a primitive 𐎠 , yet the frequent examples of the converse mutation may be held to support his explanation³. At any rate, if the Sanskrit *महे* had been a primitive form, we could hardly by possibility have had the Cuneiform equivalent of *mahaya*. The Devanagari *ह* would in all likelihood have been represented by 𐎠𐎡 or 𐎠𐎢 or 𐎠𐎣 .

The term *athahya* certainly signifies "it was said," and as it cannot represent the imperfect *अज्ञस्यत्*, (we have, indeed, an example of the regular passive imperfect in *akun(a)vayatá*,) I am obliged to explain it as the 3rd pers. of the aorist, notwithstanding that the radical vowel retains its quantity, and that in the similar aorist form of the passive voice, *adáriya*, the Sanskrit termination in *i* is replaced by *iya*. We must remember, indeed, that we are not without precedents, even in Sanskrit, for the retention of the short vowel in the passive aorist, (compare *अजनि*, "he was born," *अवधि*, "he was killed,") and that,

¹ While I thus willingly concede the originality of the passive ending in *mahaya*, I should still consider the active plur. termination of the 1st pers. in the possible term *thahámahya* to be *amahya*, for *asmasi*, the true and original form of the 1st. pers. plur. present tense of the substantive verb. See above under the head *Jadiyámiya*.

² Bopp ably illustrates this subject, Comp. Gr., s. 472; but I do not find any etymological explanation of the ending in *मधे madhé*.

³ Generally, I think, in grammatical adjuncts, the dental is an older form than the aspirate, as in the adverbial suffix of place, and certainly in the 2nd pers. sing. of the imperat.; but on the other hand, *ad-am* for the pron. of the 1st pers. sing., is undoubtedly a later orthography than *ah-am*, and *daraya*, *dastayá* and *guda*, are also, it may be presumed, degradations of the Sanskrit forms *हरि*, *हस्य*, and *गुह*.

⁴ See Wilkins, s. 601. These however are, I believe, the only examples

although the terminal 𐎧 is represented by *iya* after other consonants, owing to the repugnance of the old Persian to admit compound groupings, yet the aspirate possesses a peculiar aptitude for combination, and *hya* therefore is always used for 𐎧 in the 2nd person singular of the present tense of verbs¹. I propose, accordingly, to compare *athahya* with 𐎠𐎧𐎡𐎹 , which, although not in use, will admit of a possible formation.

The imperfect word which appears to commence with 𐎧𐎡𐎹 in line 49 of the 4th Col., at Behistun, is in all probability a derivative from the same root *thah*, which I am now considering, but the passage is too much mutilated, and the sense is too obscure to justify me in attempting its restoration². I have less hesitation in completing the other imperfect word commencing with 𐎧𐎡𐎹 𐎠𐎧𐎡𐎹 in line 58 of the same column, for the sense evidently requires a term signifying "thou shalt not be recorded," and *tháhyáhya*, as the 2nd pers. sing. subjunctive present of the passive would give that precise meaning³. At the same time, it may hardly be allowable to analyze a term for the orthography of which we are thus merely dependent on a conjectural restoration.

𐎧𐎡𐎹 𐎠𐎧𐎡𐎹 𐎠𐎧𐎡𐎹 𐎠𐎧𐎡𐎹 𐎠𐎧𐎡𐎹 𐎠𐎧𐎡𐎹 𐎠𐎧𐎡𐎹 𐎠𐎧𐎡𐎹 THÁIGARCHAISH, [Col. II., l. 46, 47, p. 220.] *Thegarsis*. The name of a month in the old Persian calendar, which here occurs as the gen. case of a masc. theme in *i*. As the Median employs an aspirate to express the

which occur of such a formation in Sanskrit. In every other case the short *a* is elongated, and the other vowels are affected with the *vriddhi* in the pass. aorist.

¹ I may instance also the optional reading of *ahiyáyá* and *ahyáyá*, as a proof of the tendency of the letter *h* to coalesce immediately with the *y*.

² See the notes to clause 3, para. 8, Column IV. at Behistun, p. 248.

³ The appearance of the 𐎠𐎧𐎡𐎹 however, as the second character, is suspicious. The elongation might, it is true, distinguish the subjunctive (which would be used in the complement to a condition) from the indic. mood in the passive voice, but we have no authority for such a construction. It might also be used to give a causal signification to the verb, the etymological meaning of the passive verb *tháhya*, being "to be spoken of," while that of *thahya*, is simply "to be said" or "called."

initial letter of the Persian word, and as the month in question may be referred, from its relative position among the series of names preserved at Behistun, to the winter season, I am almost inclined to derive the term from the Sanskrit हिमकर, "cold," supposing the nasal coalescing in the first place with the guttural, and thus forming *hinkara*, to have been subsequently lost in the Cuneiform, as the first element of a groupe, and seeing in the first syllable the *vridhhi*, which is also met with in many of the derivatives from the Sanskrit हिम. The guttural, indeed, may have been altered from the surd to the sonant grade by the absorption of the nasal, but I am unable to offer any reasonable explanation of the suffix in *chi*. Several other examples occur in the inscriptions of the genitive of masculine themes in *i*, such as *Fravartaish*, *Bágayádaish*, and in the latter term, as the $\overline{\text{Y}}$ necessarily opens on the *a*, we have a determinate proof of the *guna* being introduced before the case-ending in the old Persian, as it also is in Zend and Sanskrit; *aish*, in fact, being the exact equivalent of रः or अश्व .

𐎠𐎡𐎢𐎣𐎤𐎥𐎦𐎧𐎨𐎩 THURAVÁHARA-HYA, [Col. II., l. 36, p. 218, &c.,] *Suravaris*. This is the name of another of the old Persian months, which probably belonged to the spring, as it intervened between the intercalary month Auámaka and that of Garmapada, the latter, from its etymological import, being necessarily included in the hot season; शूर in Sanskrit is a name for "the sun," and वासरः signifies "a day," but I know not if we are justified in assuming this derivation for the Thuraváhara of the inscriptions. I cannot pretend indeed, at present, to give any illustration of the primitive Persian calendar. The names are undoubtedly more ancient than those of the Zend Avesta, (which, indeed, are taken from the genii of the hybrid Chaldæo-Persic theogony). They are probably more ancient than any nomenclature which is preserved in Sanskrit literature, or than the titles of the months of the Cappadocians which have been handed down to us by the Greeks. They bear internal marks of

an Arian origin, and may be supposed to refer to the variations of climate or natural phenomena which marked the respective seasons of the year. On many grounds they present a curious object of enquiry, while the employment of the same names by the Medes, or at any rate by the race who spoke the so-called Median language, is a circumstance of direct, and perhaps important, ethnographical value.

ŋ (d with a or á).

DARAUG. See **DURUJ.**

𑀩 = (𑀭 𑀢𑀺 𑀭) 𑀓 DANAUTUVA (?) [Col. IV., l. 76, p. 254.]
Prosperet. I doubt exceedingly if this can be a perfect word; for the Sanskrit धन , the meaning of which will alone approximately suit the context, is of the first and third instead of the eighth class, to which the Cuneiform term, if complete, would necessarily belong, in order to explain the *guna* of the conjugational suffix'. I would much rather suppose the full orthography to be *ardanaautuva*, for the Sanskrit अर्धनोतु, comparing *arda* with अर्ध (as in *Ardastāna*,) and supposing the syllable 𑀓 = (𑀭 *nau*, to be the characteristic of the fifth class, which, as it is well known, receives the *guna* before all the light terminations. The signification indeed, must necessarily be "may he prosper," which is the exact meaning of the Sanskrit *vidhnotu*, and it is impossible to say from the present appearance of the rock whether other characters may not have preceded the 𑀩*.

It is quite unaccountable that Professor Lassen, with so many examples before him of the Cuneiform imperative, should have endeavoured to assimilate the termination in *tuva* with the

¹ All the roots of the eighth class, it is true, in Sanskrit (excepting कृ) end in a nasal, which would apply to *dan* sufficiently well, but they are at the same time, as it is well known, extremely limited; and there is no single verb of the class of which the meaning will apply to the passage under consideration.

² In the Cuneiform text I have conjecturally given the sign of disjunction before *danautuva*, but it cannot be distinguished on the rock.

Sanskrit ऌ', which is the sign of the 2nd pers. of the middle voice, instead of comparing it difectly with ऋ, the regular ending in Sanskrit of the 3rd pers. of all verbs of the active voice². It is impossible, I think, that *tuva* could orthographically represent the syllable *sva*, while a Devanagari ऋ could be expressed in the old Persian in no other manner; and moreover it must be remembered, that forms in *tuva* are always used in the inscriptions with a nominative *A'uramazdá*, the phrases, "may Ormazd protect," "may he prosper," "may he bring help," &c., being evidently considered more respectful than if the Supreme Angel were addressed in the 2nd person.

I may add, also, that in the particular passage where we have *danautuva* or *ardanautuva*, the verbs in the other clauses invoking a series of blessings are used throughout in the 3rd person.

𐎠𐎡 DAR. A root answering to the Sanskrit धृ, "to hold" or "possess," which becomes *𐎠𐎡𐎹* *dēřē*, in Zend, and *دار* *dar*, in Persian. The verb is both of the first and of the tenth class as in Sanskrit³, and is found in the inscriptions under the following forms:—

DĀRAYĀMIYA, [Col. I., l. 26, p. 200,] *Habeo—teneo*.

ADĀRAYA, [Col. I., l. 85, p. 211, &c., &c.,] *Tenuit—habitavit*?

ADĀRI? (for ADĀRAYA,) [Ins. No. 6, l. 22, p. 294,] *Tenuere—habuere*.

¹ See Ueber die Keilinschriften, p. 248. Professor Lassen, however, appears to have been led into this error by taking the letter 𐎠𐎡 for *dh* instead of *t*.

² The *t* in this suffix is of course the demonstrative dental applied to the 3rd person, but I know not the grammatical value of the *u*. I should have supposed, also, the *τω* of the Greek imperative to be equivalent to the Sanskrit transitive ending in *tu*, in the same way as *των* in the middle voice would represent the Sanskrit and old Persian *tām*, but Professor Bopp refers both one termination and the other to the Vedic णात्. See Comp. Gr., s. 470.

³ The verb in Sanskrit is also sometimes used in the sixth class, but the inscriptions are deficient in any example of this form of conjugating the root.

⁴ Westergaard gives the middle imperfect *𐎠𐎡𐎹𐎶𐎶𐎶* in the Rig Veda with the sense of "they lived;" but Rosen translates "obtinuerunt." R. V. Hymn. 20. l. 8. See Rad. Ling. Sans., p. 63, and Rig Vedæ Spec. p. 30.

ADÁRAYA, [Col. I., l. 26, p. 200,] *Potitus essem.*

ADÁRIYA, [Col. II., l. 75, p. 223, and l. 90, p. 226,] *Retinebatur.*

ADARSHIYA, [Ins. No. 4, l. 8, p. 279,] *Potitus sum.*

Dárayámiya for the 1st pers. sing. of the act. present of the tenth class exactly answers to the Sanskrit धारयामि, the elongation of the *a* in the first syllable standing for the vriddhi of the Sanskrit verb, and the following *aya* being the conjugational suffix.

The 3rd pers. sing. also, of the act. imperf. of the same class, *adáraya*, is the regular correspondent of the Sanskrit अधारयन्, and the term at Nakhsh-i-Rustam, which in Westergaard's copy appears as *adári*, but which should, I think, be written *adáraya*, with a terminal < instead of >, will represent with equal closeness the 3rd pers. plural अधारयन्³.

Where the term *adáraya*, however, occurs in the 9th para. of the 1st Col. at Behistun, it must be necessarily identified as the 1st pers. sing. of the middle aorist of the tenth conjugation, and the termination in *aya* must stand for the personal-ending of that voice (ए=ai¹) rather than for the conjugational suffix. In Sanskrit, indeed, verbs of the tenth class and causals, while they usually retain the elongation of the radical vowel in the aorist of both voices, lose the class syllable or affix in अय्, and I believe, therefore, that अधारे for the 1st pers. sing. of that tense in the middle voice of the tenth class would be an equally legitimate formation with the अधृषि, which must be in use for the corresponding form of the first class². If, however, there were in the

¹ For observations on the elongation of the class-syllable *a*, and on the so-called personal termination, see the note to *jadyámiya*.

² See the notes to the third para. of Insc. No. 6, p. 295.

³ The personal-endings of the sing. and plur. *t* and *n*, are of course elided in the old Persian as silent terminals.

⁴ Bopp, in his excellent chapter on the Medial Terminations, (Comp. Gr., s. 466 to s. 480,) satisfactorily explains the general substitution of *é* (=ai) for *amé* (=amai) in the 1st pers. sing. of the middle voice.

⁵ In treating of the active aorist of the tenth class, Bopp observes, that the syllable of reduplication or the base-syllable must be long, and I imagine that the latter condition applies also to the middle voice. See s. 580 of the Comp. Gr.

language of the inscriptions such a tense as the subjunctive aorist, which is far from improbable, I should prefer that explanation for *adāraya*, as the conditional adverb *yātā*, "until," which precedes it, would be more appropriately joined to the subjunctive than to the indicative mood. I may add, also, that the reflective power of the middle voice is sufficiently apparent in the application of *adāraya*, for *yātā adāraya* means "until I had gained (for myself.)"

Adāriya is, I think, undoubtedly the 3rd person singular of the passive aorist, the Sanskrit correspondent being *अधारि*, and the euphonic *ya* being necessarily superadded, as the old Persian will not admit of a termination in the vowel. I do not find any explanation in Bopp of the lapse of the personal termination in this form of the verb, and Wilkins, comparing the passive aorist with his tenth mode, which properly belongs to the middle voice, contents himself with observing that in the 3rd pers. sing. *इ* has been substituted for *स्*¹; but that the loss of the *t* must have been very ancient, is shown not only by the accordance of the Sanskrit and the old Persian, but by the agreement also of the Zend, in which Lassen has found the corresponding form of *ērēnāvi*, from *ērē* with the suffix of the fifth conjugation². Under the head *athahya*, (p. 179) I have shown that, although *adāriya* must in the inscriptions orthographically represent *adhāri*, yet the same termination in *i* may be contracted into *ya* after an aspirate, from the facility which that consonant affords for combination.

The only other form of the verb that occurs in the inscriptions is *adarshiya*, which Professor Lassen has already compared with *adharshi*³, the 1st person sing. of the middle aorist, designated by Wilkins as the tenth mode. I should suppose, however, that

Although, indeed, I cannot find any example of *अधारे*, if the verb be of the tenth class it would seem to be a regular middle form, belonging to the ninth mode of Wilkins. Compare in Wilkins's Gram., s. 440, 444, and 455.

¹ See Wilkins's Gr., s. 601.

² Ueber die Keilinschriften, p. 249. Zeitschrift, p. 527.

³ See Ueber die Keilinschriften, p. 44 and 247. Zeitschrift, p. 525. Bopp has some admirable remarks on this form of the aorist in his Comp. Gr., s. 542 to s. 547, and he clearly shows its connexion with Latin perfects in *si*; compare *scripsi*, *rexi*, *rexi*, &c.

although the root **नी** ending in a long vowel may admit the *guna* in the 3rd and 1st persons **अनेष्ट** and **अनेषि**, the short vowel would be preserved intact in **अधृत** and **अधृषि**, as in fact it is preserved in **अकृत** and **अकृषि**; and I consider, therefore, the substitution of *dar* for *dhri* to be the mere orthographical artifice by which the Cuneiform alphabet compensated for its want of the Devanagari **चृ**¹. Westergaard gives **अधृत** as the 3rd pers. of the middle aorist of **धृ** in the first class, and I accordingly assign the 1st person *adarshiya* to the same conjugation; but I am not prepared to say that there is any real distinction of meaning, according as the root may follow this class, or be of the ordinary tenth conjugation. The verb is used, I may add, with a reflective application, and hence the employment of the middle instead of the active voice.

From this same root, *Dar*, conjugated in the tenth class, is undoubtedly derived the name of Darius, and I suspect the termination to be nothing more than a euphonic strengthening of the *unadi* affix in *u*, though it is, to say the least of it, a strange anomaly to find the conjugational characteristic in a derivative noun². The name occurs in several cases:—

𐎠 𐎠 𐎠 𐎠 𐎠 𐎠 𐎠 𐎠

DĀR(A)YAVUSH, nom., [Passim.] *Darius*.

DĀR(A)YAVA(H)USH, gen., [Passim.] *Darii*.

DĀR(A)YAVUM, acc., [Passim.] *Darium*.

Herodotus expressly states this title to mean *ἐρξείης*, "the powerful"³. Others translate it *φρόνιμος*, "the intelligent," or

¹ This substitution, in fact, is precisely similar to the corresponding Zend orthography of **𐬔𐬀𐬭𐬀** *dērē*. It must be observed, however, that the primitive short vowel of the Sanskrit still retains, notwithstanding the Cuneiform mutation, its power of aspirating the following sibilant. See *Rad. Ling. Sans.*, p. 63.

² It is owing to this presumed identification of the Cuneiform **𐎠𐎠** with the conjugational suffix of the tenth class, that I write *Dāraya* instead of *Dārya*, but at the same time I employ a parenthesis to show that the reading is doubtful.

³ Lib. VI., c. 98; *ἐρξείης* is Ionic for *ἐρξίας* from *ἐργω*. Donnegan gives *πρακτικός* as the equivalent.

⁴ Hesychius in voce *Δαρείος*.

πολεμικός, "the warlike¹." Etymologically however, it simply signifies "the possessor," and the quality or object possessed must be left to conjecture.—The Greeks usually employed the corrupt reading of Δαρείος, but we have a purer form in the accusative Δαριαύην, which is preserved by Strabo², and the Hebrew דַּרְיָוֶשׁ, *Daryavesh*, represents almost exactly the true and primitive orthography. The Medes and Bābylonians, also, reproduced the original Persian title as nearly as their respective alphabetical systems would admit, and in the modern corruption even of دَرَاَب, *Dārāb*, although the inflexion has been dropped and the conjugational suffix suppressed, the Cuneiform 𐎣𐎶𐎠𐎺 is still preserved in the terminal labial. Of all the Achæmenian names this title alone appears to have survived the dynasty without much disfigurement. The King of Media, at any rate, who supported Tigranes in his great battle with Lucullus, had the name of Darius³, and that the old pronunciation had not been essentially altered as late even as the first century of our era is evident from the comparison which Strabo makes between the Greek and Persian orthography. I suppose, however, that under the Lower Arsacides the historical knowledge of the early empire was almost entirely lost, and that when the Magi accordingly under Ardeshr̥r Bābegān undertook to recover the scattered Zoroastrian fragments, and to compile a full and complete liturgy for their renovated faith, the name even of the great *Dār(a)yavush* of the Behistun and Persepolitan Inscriptions was no longer known to them. His memory, as the reformer of the national religion, was still held in veneration, but by a strange error of nomenclature which can only be explained, I think, by the influence of Greek literature, the patronymic Vishtāsra was substituted for the proper name of the king⁴; and the title of

¹ Etym. Mag. *in voce*.

² Δαριαύην, however, is a correction of Saumaise's for Δαριάκην, which occurs in all the MSS. of Strabo, c. XVI., p. 785; and Salm. Ex. Plin., p. 405. Gesenius proposes a further correction of Δαριάβην; but this is quite unnecessary, while Lassen (Ueber die Keilinschriften, p. 9.) writes Δαριάκης in the nom. I think it very possible, that Strabo may really have written Δαριάκην, for the guttural was a regular Parthian euphonic suffix.

³ He is named by Plutarch in his Life of Lucullus, and by Dio Cassius.

⁴ That the Zend writings, in their present state, are as old at any rate as the Sassanians, may be inferred from the testimony of Ammianus, (lib. XXIII., c. 61), and Agathias (lib. II., c. 24), who both connect Hystaspes (the Vishtāsra of

Dār(a)yavush, corrupted probably in the popular speech of that age to *درب* *Darāb*, was appropriated to Darius Codomannus, and to an immediate predecessor of the same name upon the throne, whose history must be considered purely fabulous. I am ignorant from what source Anquetil has drawn the Zend orthography of *𐬔𐬀𐬢𐬀𐬭𐬀𐬎𐬌𐬌𐬀* *Añtarē-dfsh*; it certainly is not found in the Zend Avesta, and if it ever were in use among the Parsis of India¹, it must be regarded as a forced Zend trans-

lation, of the Persian دراب *Daráb*, which, the original etymology being lost, might be supposed to signify "on the water*." When the latter part of the Pehlvi *Bun Dehesh* was composed, the name exhibited the same form of *Dará* by which it is usually known at the present day³, and it is probable, therefore, that the less mutilated reading of *Daráb* has been preserved through a Pazend or Pársí medium.

There is a remarkable circumstance connected with the declension of the noun *Dár(a)yavush* to which I have previously alluded in the Supplementary Note on the Alphabet, but which still requires further explanation in this place. As a masculine theme in *u*, the genitive should of course be formed by the mere introduction of the *guna*, as from *Kurush* we have *Kuraush*, and from *Bábirush*, *Bábiraush* *. The Cuneiform alphabet, however,

the Zend Avesta,) with the establishment of the later Magism. Ammianus does not question but that this Hystaspes was the father of the great Darius, but Agathias notices the uncertainty of the identification. In the Zend fragments, also, it is interesting to observe that Vishtâspa is the latest Achæmænian king whose name occurs, and hence may be derived an argument that the hymns and prayers really date from that epoch.

¹ Burnouf has well exposed this spurious derivation of the name of Darius, in his Mem. on the Hamadan Inscriptions, p. 73; but I am not sure that Anquetil did not fabricate the reading, to suit his own conceit that the etymology must be necessarily sought in the Zend language. His words at any rate are ambiguous, and he quotes no authority. See his Memoir on the Zend, Mém. de l'Acad., tom. LVI, p. 199 and 241, 12mo Edit.

* The Persian fables depending on this derivation, are, I consider, unworthy of notice.

* My copy of the Bun Dehesh, which is much more complete than that translated by Anquetil, gives *Dárd* for the one Darius, and *Dárdí Dárhán* for the other.

* In these terms the introduction of the *guna* is shown by the employment of

by a deficiency as I think in its structure, possessed no secondary form for the *v* or *w*, and as orthographically therefore *Dár(a)-yavush* could not be distinguished from *Dár(a)yavaush*¹, it was obliged to employ an aspirate in the genitive to mark the introduction of the *guna*. This aspirate, accordingly, possessing no grammatical value, and probably not intended for articulation, I have placed in a parenthesis. The accusative *Dár(a)yavum* is again regularly formed and requires no illustration.

𐭠𐭥𐭥𐭥𐭥𐭥𐭥 DARAGAM, [Col. IV., l. 56, p. 250, and l. 75, p. 254,] *Longum*. This is an adjective in the neuter gender used adverbially. Its origin must be referred to the Sanskrit root द्राय, "to lengthen," but it may be more immediately compared with the Zend 𐬔𐬀𐬭𐬀𐬭𐬀 *darēga*, which is of very common employment²; as well as with the Persian درنگ *darang*, where the nasal is interposed before the guttural agreeably to the genius of the language, and also with دراز *darāz*, "long," which in Pazend would be undoubtedly written *daraj*³. I am not aware that a cognate term is employed in Greek or Latin, or in any other of the Arian languages. It was peculiar, perhaps, to the Perso-Sanskrit family, but in these tongues was of extensive application.

𐭠𐭥𐭥, which necessarily requires an *a* (or an *i*) to follow it, instead of 𐭠𐭥𐭥𐭥, which with the same uniformity requires to be followed by *u*.

¹ That is, the letter 𐭠𐭥𐭥 will coalesce indifferently with the *a* and *u* and 𐭠𐭥𐭥𐭥 may be thus read either *vu* or *vau*. Strictly speaking there is a secondary form of 𐭠𐭥𐭥, namely 𐭠𐭥𐭥𐭥, but that character is exclusively allotted to combination with the vowel *i*, and could not therefore be employed in the word under discussion.

² For a full examination of the etymology of the Zend *darēga*, see Burnouf's *Yaçna*, p. 387; he supposes द्राय to be a secondary form of दृह *drīh*; and refers *darēga* to another supposed secondary form दृघ *drīgh*.

³ The superlative 𐬔𐬀𐬭𐬀𐬭𐬀𐬭𐬀 *drājista*, does actually occur in Zend. See *Yaçna*, p. 389.

𐎠𐎡𐎹𐎶𐎠

DARAYA-HYÁ, [Col. I., l. 15, p. 197,] *Maris, quasi maritima*.

DARAYA-M, [Col. V., l. 24, p. 259,] *Mare*.

PÁRA-DARAYA, [Ins. No. 6, l. 28, 29, p. 294,] *Transmarini*.

The Cuneiform *daraya*, "the sea," is derived from the Sans.

हरि, "green," and answers to the Zend 𐬔𐬀𐬭𐬀𐬎𐬌, *zarayó*, Pehlevi *zaré*, and Persian دریá *daryá*¹. It is possible even that the Greek *θάλασσα* may be a term of cognate origin, the termination in *ασσα* or *αττα*, being the Chaldee feminine characteristic which occurs in the *Θαλάτθ* of Berosus, and the substitution of *θαλ* (from *θαλλω*, "to be green,") for *dar* being entirely agreeable to the laws of Greek orthography². With the primitive signification of "green," compare likewise the Zend 𐬔𐬀𐬭𐬀𐬎𐬌 *zairi*; Latin "*vireo*," "*viridis*" (where the digamma takes the place of the aspirate);

Persian زار *zár* in مرغ زار *murgh-zár*, "pasture land;" نی زار *nai zár*, "a place of green reeds," &c.; also, زرد *zard*, "yellow," a meaning which equally applies to *hari*³. *Darayahyá* is undoubtedly the genitive case of a masc. theme in short *a*, but according to a system of construction, which is very frequent in the inscriptions⁴, it is used as an adjective of attribution; *tyiya darayahyá*, "which are of the sea," being employed, as I think, to denote the insular possessions of the Greeks, in contradistinction to the *tyiya 'ushkahyá*, "which are of the dry land," or their continental settlements.

Where we have *abiya darayam* in the 5th Column at Behistun, the writing is too mutilated to admit of connected inter-

¹ For a full and satisfactory examination of the Zend *sarayo*, see Burnouf's *Yaçna*, Notes et Eclair., p. 97.

² Εἶναι δὲ τοῦτο χαλδαῖστί μὲν Θαλάτθ, ἑλλενιστὶ δὲ μεθερμηνεύεσθαι *θάλασσα*.—Syncellus, p. 23. This extract from Berosus is preserved by Alex. Polyhistor.

³ Burnouf has compared most of these terms in his *Conférentary* on the *Yaçna*, sur l'Alphab. Zend, p. 81, n. 32, and he has even ventured to include in his list the Greek ὤχρος.

⁴ Compare *karáhya maná*, "my forces;" *kshatram tyá Bábirauna*, "the Babylonian crown," (where the locat. is used for the genit.) *hyá amákham tumá*, "our race," &c.

pretation, but this particular phrase can only signify, "*ad mare*" or "*versus mare*."

Páradarayā is a conjectural restoration, the arguments in favour of which have been already explained in my notes to the third paragraph at Nakhsh-i-Rustam. That the last element of the compound is *daraya*, "the sea," will admit of no question, for the Median equivalent is the same term which answers to *darayahyā* in the geographical list at Behistan; and as the Scythians of Imáus and of the Tigris in the detailed catalogue of the Satrapies on the grave of Darius, are separately enumerated, there would seem to be no reasonable explanation for the *Saka tyiya* - - *radaraya* in the same list, but to suppose an allusion to the Scythians of the North, whom Darius subdued in his famous expedition beyond the Hellespont'. *Páradarayā*, moreover, may, I believe, be regularly formed, as an indeclinable compound of the सञ्चयीभाव class, the first element being the neuter पारं, used as a particle or preposition. In Sanskrit, however, the corresponding word पारेसमुद्रं is inflected in both its elements.

𐎠𐎡𐎹𐎡𐎹𐎡𐎹 DARSH, a root signifying primitively "to dare," and identical with the Sanskrit धृष्, the Zend 𐎠𐎡𐎹𐎡𐎹𐎡𐎹 *darsh*, and the Greek θαρσ-έω². The following derivations occur in the Inscriptions:—

ADARSH(A)NAUSH, [Col. I., l. 53, p. 204,] *Ausus est*.

DARSHAM(A), [Col. I., l. 50, p. 204, Col. IV., l. 37, p. 245, Ins. No. 7, l. 15, p. 312,] *Colibitionem* (?)

DÁDARSHISH, [Col. II., l. 29, p. 218, &c., &c.,] *Dadarses*.

DÁDARSHIM, [Col. II., l. 33, p. 218, &c., &c.,] *Dadarsem*.

Adarsh(a)naush is the 3rd pers. sing. of the act. imperfect of the fifth class; and, as far as grammatical powers are concerned,

¹ In the notes to the Nakhsh-i-Rustam Inscriptions, I have supposed the Scythians beyond the sea to include the seven last names of the Geographical list; but I have now abandoned that idea, and restrict the *Saká tyiya páradarayā* to the Thracians and the barbarians of the Danube, the Dneister, and the Don. There is a very curious notice also, as I think, of these same European Scythians, in the independent Babylonian Inscription of Persepolis, marked L in Niebuhr's Plates, which I shall endeavour to explain under the head *Saka*.

² Burnouf has already compared the Zend 𐎠𐎡𐎹𐎡𐎹𐎡𐎹 *darshi*, with the Greek θαρρός or θαρύς. Yaçna, p. 44.

may be compared in every respect with the term *akunaush*, which has been already sufficiently explained. Its Sanskrit correspondent is चयुषोत्¹, which, according to the conjecture formerly offered, may have been originally चयुषोः². The substitution of *darsh* for *dhřish* in this term must not be referred to the employment of a *guna*; for the radical vowel in verbs of the fifth class, both in Sanskrit and in old Persian, remains in its primitive state³; it must be considered merely as the orthographical artifice which compensates for the want of the vowel च in the Cuneiform alphabet; and if the short *a* which I have placed in a parenthesis be also admitted between the root and the conjugational suffix, it must be regarded as a redundant letter, of which the only office is to break up a tri-literal groupe.

Darshama is a term of considerable difficulty. In the first phrase which I have quoted, *kārashim hachá darshama atarsa*, (Beh. Col. I., ls. 50, 51,) the orthography is doubtful; the second letter, indeed, of the word which I have read *darshama*, appears, on the rock to be 𐎠𐎢, rather than 𐎠𐎣; and it is very possible, therefore, that with the reading of *dabashma* (from दम्, "to impose upon," with the compound affix which occurs in भीष्म, "horror,") the true signification of the phrase may be "the State feared him from his imposture," that is "owing to his imposture," but in

¹ This term is quoted by Westergaard in his *Radices*, p. 288, from the *Bhag. Puran.*, 17, 81.

² Bopp, however, says, that "the *s* of this form is without doubt a weakening of the original *t*," (see *Comp. Gr.*, s. 462,) and Lassen and Burnouf are of the same opinion. See *Ueber die Keilinschriften*, p. 246, *Zeitschrift*, p. 254, and *Yaçna*, Notes, p. 147, where Burnouf quotes the authority of *Panini*, and also compares *Colebrooke Sans. Gr.*, p. 141.

³ We have *ku*, indeed, instead of *kau*, throughout the special tenses of *kunu*, "to do."

⁴ I have formerly translated, "the state feared from opposing him," that is, "feared to oppose him;" and it is certainly more consonant with Cuneiform usage thus to connect the abl. sign *hachá*, "from," immediately with the neuter verb, "to be afraid," than to render *tars*, as an active verb, "to fear," and to make it govern the accusative pronoun *shim*; but on the other hand, I cannot possibly identify *darshama* as an active participle in the ablative case; the termination, indeed, in *ma*, if it stand for *mas*, will belong to a theme in silent *m*, (*Wilkins*, s. 118,) and such themes require to be verbal roots, or modifications of verbal roots ending in the same letter म्.

this case there will still be a difficulty in explaining the ablative ending in short *a*, unless we suppose *at* in nouns of the first class to have been designedly substituted for *át* in the old Persian, to mark a distinction of the neuter from the masculine gender. In the second phrase, also, *hachá daraugá darsham(a) patipayuvá*, it is almost impossible to distinguish whether *darsham(a)* may be an ablative or an accusative; that is, whether it be an adjective in apposition with *daraugá*, or a noun forming the object to the verb. This indeed entirely depends upon whether *patipayuvá* be used in an active or neuter sense, and supposing the term to be derived from पु, with the double prefix प्रति and म, it may perhaps etymologically signify "keeping apart from," as well as "applying" or "secreting". As it is unusual however to bring a substantive and adjective into immediate contact (without interposing the relative pronoun²;) as the root *darsh*, moreover, with the adjectival suffix in *ma*, (the preceding short *a* being euphonic,) will form no suitable epithet for *daraug*, "a lie;" and above all, as *daraug* is certainly a masculine noun, and the masculine ablative of an adjective formed with that suffix and agreeing with *darauga* would thus necessarily be *darshamá* (for *darshamát*), I think it preferable to read the term $\overline{\text{प}} \overline{\text{म}} \overline{\text{र}} \overline{\text{श}} \overline{\text{म}}$ in the passage under discussion, *darsham*; comparing it with $\overline{\text{प}} \overline{\text{म}}$ the accus. of a masc. noun and rendering the entire phrase "from the lie practise restraint³."

In the third passage where the same term occurs, it is impossible to extract any sense from the few disjointed fragments which alone are legible, and I observe, moreover, that although the characters composing this particular word are sufficiently dis-

¹ Westergaard (Rad. Ling. Sans., p. 46,) gives "*disjungere*,"^{*} as the true meaning of प्रयु, but it would also, I suppose, equally with the cognate form प्रयुञ्, signify "to make an effort." It is impossible, however, to determine any thing satisfactory with regard to *patipayuvá*, for there is no such root in Sanskrit as पु or पयु, and although *prati* becomes *pati*, the true correspondent of म should be *fra* and not *pa*.

² *Kára Pársa* and *kára Mada* are at the same time examples to the contrary.

³ "Restraint" is given by Wilson as the sixth meaning of $\overline{\text{प}} \overline{\text{म}}$. See Dict. p. 441.

ROYAL ASIATIC SOCIETY.

PROCEEDINGS

OF THE

TWENTY-SIXTH ANNIVERSARY MEETING OF THE SOCIETY.

Held on the 12th of May, 1849.

THE RIGHT HON. THE EARL OF ELLESMERE,

PRESIDENT,

IN THE CHAIR.

THE FOLLOWING REPORT OF THE COUNCIL

WAS READ BY THE HONORARY SECRETARY:—

THE Council of the Royal Asiatic Society have a melancholy duty to perform in recording the deep regret of the Society for the sudden and unlooked-for decease of their late President, the EARL OF AUCKLAND. The heavy pressure of public business had for some time rendered it impossible for his Lordship to attend, as he had done before his accession to office, the meetings of the Society or the Council, though he indulged the hope that greater leisure might yet be afforded to him to resume the duties of the President's office, in which he had always taken a lively interest.

Little more than a month before his lamented decease, Lord Auckland thus expressed his own feelings in a note to the Secretary:—"I am often ashamed of the very small amount of service that I can render to the Asiatic Society while I am in office; and though my interest in your objects, and my attention to them, would revive, if I were at liberty, I often think that I ought to make way for a more efficient President. Might it not be an improvement in our constitution if, as is the case in other societies, the President were chosen only for a short term? It would give the Society a better chance than it has at present of insuring vigour in the officer who should be at the head of its direction." The Council were engaged in considering the suggestion thus thrown out, when they learned, with unfeigned sorrow, that the nation had been, by a sudden stroke, deprived of an able

1849.]

and upright minister; the Society of an efficient President; and his many friends, of one beloved for his private virtues, and the never-failing kindness of his heart.

While the Earl of Auckland was Governor-General of India he was a zealous promoter of all designs which had in view the extension of knowledge, and the enlargement of native education. Institutions for the cultivation of medical science received his particular attention; and we have witnessed the success of his measures for preparing Hindu youth for distinction in a profession of such essential benefit to the native population of our Indian empire, in the remarkable progress and high distinction attained by the students who came to this country under the care of Dr. Goodeve, and in the practical advantages resulting from the employment of native sub-assistant surgeons, in charge of various dispensaries in Bengal and the North Western provinces.

Whenever expeditions were sent forth in furtherance of military or political operations, there was provision made for the pursuit of every branch of useful knowledge, and for the researches of science and art. In aid of such valuable labours, Lord Auckland had caused a volume to be prepared, under the directions of the most able men in each department of inquiry, containing a very extensive series of questions and suggestions on every topic of interesting research. This valuable collection will remain, not only as an abiding testimony of his Lordship's enlightened views, but also as a practical guide and director to the researches of future investigators.

It does not fall within the scope of these remarks to dwell on the more prominent characteristics of Lord Auckland's life, which are those of a British statesman, and the ruler of our extensive empire in India. These subjects belong to the historian, who will best record his faithful services to his Sovereign and his country.

The Society has also recently lost one of its first founders and most zealous supporters, the Right Hon. Sir ALEXANDER JOHNSTON, who in the first year of its existence was appointed a Vice-President, and Chairman of the Committee of Correspondence.

The whole of the active life of this highly distinguished servant of the Crown was bound up with every topic of interest in Indian history and research. Taken to Madras, at the early age of five, by his father, who held an office of trust under the government of Lord Macartney, he passed the ensuing six years in the acquirement of various knowledge—partly under the direction of the late Sir Thomas Munro, General Leith, and Colonel Colin Mackenzie, who, at that period, were themselves ardent cultivators of those talents which were to raise them to the most important posts in the administration of the political, judicial, and revenue affairs of the Madras Presidency—and in the investigation of the geography, antiquities, and history of the provinces of Southern India. His religious training was entrusted

to the learned, pious, and earnest missionary, Schwartz ; and the periods of relaxation from mental study were devoted to the strengthening of his frame by the athletic exercises of the native warriors, and to the sports of the field, in company with the Poligar Chiefs of Madura, and its neighbourhood.

After his return to England he was, at an early age, entered a member of Lincoln's Inn ; and was afterwards taken by his father, first to France, and thence to Göttingen. While profiting by the ability of the professors of law at that university, he was at the same time acquiring an intimate acquaintance with the languages and literature of modern Europe ; and thus was his mind trained by extent and variety of acquirement, to the facility which it ever after exhibited in applying itself with readiness and success to the attainment of diversified knowledge, extending over a wide field of investigation and research.

In 1802 he returned to India, having been appointed to the office of Advocate-Fiscal in Ceylon ; and there he at once devoted the powers of his active mind to obtain an insight into the feelings and habits, as well as the religion and laws of the native inhabitants, and the history of the island. So comprehensive and valuable were his acquirements in all these subjects, and so enlarged his views, that in three years after his arrival in the colony, on the occurrence of a vacancy in the important offices of Chief Justice, and First Member of His Majesty's Council, Sir Alexander was provisionally appointed by the Governor, Sir Thomas Maitland, to fill those high offices ; and was also recommended by him to the Government at home for confirmation in those honourable appointments, in terms which shewed the sense entertained by Sir Thomas Maitland of his qualifications for the discharge of those duties in the way most beneficial to the best interests of the rulers and the subjects. Of Sir Alexander Johnston's merits, his Excellency thus expressed himself :—

“For filling any such appointment, the strongest recommendation that can be proposed, is his being fully master, not only of the laws and customs, but of the habits and prejudices, religious and political, of the people over whom he was to preside as the head of the law ; and in this most important point I will venture to say, that if any one is his equal, no one can be his superior ; and there is no circumstance which can, in my mind, militate, in the smallest degree, against the very superior claims he has a just right to set up, from his assiduity, from his talents, and from the deep knowledge he possesses of everything, civil and judicial, appertaining to this island.”

The period between the appointment of Sir Alexander by His Majesty in 1806, till 1809, was employed in maturing his plans for measures of the greatest value and importance that could occupy the mind of the statesman and the philanthropist in the regions where his duties were assigned. Chief among these were the establishment of the trial by jury, and the abolition of slavery. With a view to the introduction of the former of these measures, and of other important reforms in the administration of the judicial

and political systems of the insular government, Sir Alexander returned to England, in 1809, with the approbation and support of Sir Thomas Maitland.

The success which attended the employment of respectable natives as jurors has fully justified the wisdom which projected the means of thus raising the character of the natives, by drawing forth the energies of their minds, and teaching them to appreciate the value of a pure administration of justice. It is most satisfactory to observe, that since the establishment of jury trials, the Government have been enabled to select from the respectable body of jurors, some of the most efficient magistrates on the island. To the influence of the system on the moral feelings of the people generally, the successor of Sir Alexander thus adverted in a speech delivered when the experience of eight years had fairly and fully tested the benefits with which it was fraught :—

“To this happy system, now deeply cherished in the affections of the people, and revered as much as any of their oldest and dearest institutions, I do confidently ascribe this pleasing alteration; and it may be boldly asserted, that while it continues to be administered with firmness and integrity, the British Government will hold an interest in the hearts of its Singalee subjects, which the Portuguese and Dutch possessors of this island were never able to establish.”

The endeavours of Sir Alexander Johnston to extirpate slavery, which were continued for ten years, first manifested their result in 1816. In July of that year, the gentlemen on the list for special jurymen in the province of Columbo responded to an address of the Chief Justice, by calling a meeting of proprietors of slaves, at which they unanimously resolved that all children of slaves, born after the 12th of the following August, should be free; and a committee of their body adopted a series of provisions by which their beneficent intentions were facilitated; the principal object of these was to form a fund for the maintenance of the children until the age of fourteen, when it was expected they would be able to support themselves. A resolution of the Directors of the African Institution, which is contained in their eleventh report, conveys the appreciation of the measure in Europe. It is as follows :—

“The Directors are persuaded that they express the cordial feeling of the Institution at large in offering the tribute of their grateful acknowledgment to Sir Alexander Johnston for his successful exertions in promoting,—and to the special and other jurymen of the island—for their general adoption of this important change in the condition of their country; and for the bright example which they have taken the lead in exhibiting to the world, of fixing a period for the extinction of the state of domestic slavery,—an example which the Directors trust will speedily be followed wherever it may be done with safety. But whether this hope be realised or not, it will never be forgotten that the inhabitants of Columbo were the first of the British

colonists to act upon this grand, noble, liberal, and disinterested principle; and they will for ever deserve the best thanks of every individual who has at heart the advancement of the happiness of mankind, and the improvement of human nature."

While thus occupied in promoting the most important interests of the Cingalese, Sir Alexander Johnston was not unmindful of the value of obtaining and diffusing accurate views of their social institutions and religious beliefs. As fruits of his especial encouragement and patronage, we owe to Mr. Upham the publication of the "Mahavansi, and other sacred and historical books of Ceylon,"—a work which, although since superseded by Mr. Turnour's more authentic researches, was, for some time after its appearance, the only authority for the subject of which it treats.

The never-failing interest exhibited by Sir Alexander in the operations and pursuits of this Society, is well known to all the members. His liberality added largely to the collections in our museum; and although during the last two or three years his gradually declining health, and his more frequent residence on his estate of Carnsalloch, near Dumfries, often deprived the Society of his presence on occasions when, but for those causes, he would not have been absent from his accustomed place. The Members will recur, with mingled feelings of regret and satisfaction, to the animated and instructive discourses which, as Chairman of the Committee of Correspondence, he, for some years, delivered at our annual meetings, imparting in a comprehensive survey, a notice of the various operations carried on, throughout the regions of Asia, in discovery, in science, in history, and literature; and noticing the most remarkable labours of Oriental scholars in Europe. The death of Sir Alexander Johnston,—a man whose mind was so variously and richly endowed, and whose sympathy with this Society was so deep and so unchangeable—has left a blank which will not readily be filled up.

The list of deaths in the present Report will be found to include the name of our first Treasurer, Mr. JAMES ALEXANDER, than whom the Society never possessed a more sincere friend, or one more anxious for its welfare. His judicious and practical mind established the financial arrangements of the Society, and he gave his attention for many years to their development and progress, as well as to the general duties of the Council, of which he was, *ex officio*, a member; and after the failure of his health had compelled him to relinquish the office he had so ably filled, he presented for a succession of four years the munificent sum of £100, as an annual donation to the funds of the Society. His memory will be held in deserved remembrance by those Members who had the happiness of his personal acquaintance; and in respect by all.

JOHN ROBERT STEUART, Esq., rendered much service to the Numismatic Department of Oriental Archaeology by the large collections of coins which he made during several journeys in Persia and India. There is no doubt

that the first clue which led the late James Prinsep to the deciphering of the Saurashtran coins was provided by the two plates published in the fourth volume of our journal; in the second of which he presented a *resumé* of all the inscriptions on those coins, and arranged them on a plan which tended to facilitate considerably the task of a decipherer. A collection made by Mr. Steuart, of the coins of the Arsacides and Sassanides, amounting to 250 in number, and constituting the finest and most valuable series known of those coins, was purchased by the British Museum, which has also among its treasures many Greek and Roman medals, collected by him in Italy and Sicily; and a large number of gems and cylinders, with Babylonian ornaments, figures, and cuneiform inscriptions, procured in the neighbourhood of Baghdad and Hillah.

Among the collections of Mr. Steuart, is a large number of coins of the earliest Arab dynasties of Persia, with legends in the Pahlavi character, of which only a few specimens had been hitherto published. Some of these interesting specimens have been read and illustrated by Professor J. Olshausen; and a paper is preparing for our journal by Mr. Thomas, who is in possession of the best materials for elucidating a period of Eastern history when the civilization and religion of the fire-worshippers of Persia was retreating before the new-born energy of the Mahometan invaders.

Mr. Steuart is also the author of a description of the ancient monuments of Lydia and Phrygia, published in a handsome illustrated folio volume, in 1842; and he has left a number of papers on archæological subjects, which he is believed to have prepared with a view to their publication.

The CHEVALIER DE CASTELBRANCO was a Portuguese gentleman who had for some time resided in Paris, in consequence of political vicissitudes in his own country. He was acquainted with several Oriental languages, one of which, the Arabic, he spoke with much ease. With the assistance of a native, M. Castelbranco had prepared a grammar of the modern Chaldee language, as it is spoken by the races who inhabit the countries near the head of the Tigris, and in the vicinity of the ancient Nineveh; and it is hoped that so valuable a work on the language of a people who have preserved the Christian faith in the midst of the followers of Mahomet may not remain in MS. M. de Castelbranco, by the aid of his social position and large fortune, has been a munificent patron of persons engaged in philological pursuits under less favourable circumstances than he was himself placed; and he has, on several occasions, lent valuable assistance in furtherance of literary enterprise. He died of apoplexy in January last.

JOHN GOLDINGHAM, Esq., resided many years at Madras, as the Astronomer of the East India Company's Government at that Presidency. Two volumes of Observations made during the period of his having charge of the Observatory of Fort St. George attest his professional diligence; and have

added an important and extensive body of accurate data to the general stock of materials for scientific investigation. Mr. Goldingham held for some years the office of Civil Engineer at Madras. The elegant banquetting-room at the Government House of that Presidency, on the model of the Parthenon, was erected by him in the years 1800-1; as were also the public buildings at Vellore required for the accommodation of the Mysore Princes, after the capture of Seringapatam, in 1799. Although Mr. Goldingham was not an Oriental scholar, he took much interest in the history and antiquities of India; and wrote an account of the sculptures at Mahabalipur, on the Coromandel Coast, which was printed in the fifth volume of the Asiatic Researches.

Besides those distinguished individuals of whom the Society has to lament the loss, we have been deprived by death and retirement of a more than ordinary number of members. The totals may be thus stated:—deaths of Honorary Member, 1*; of Resident and Non-Resident Members, 11†; retirements of Contributing Members, 12‡; making a total number of 25. The elections during the same period have been, of Contributing Members, 12§; and of Corresponding Members, 1||. The total number of Members of the Society is therefore less than that of the preceding year by 12.

The Council cannot feel a doubt that the advantages derived from the removal to the present house, both in the arrangement of the library, and the laying out of the museum, will afford sufficient inducement to persons interested in the objects of the Society's pursuits, to join the ranks of its members; but they must look to the exertions of the present Members to make known those advantages, and to present their friends for election. The noble munificence of the Honourable Court of Directors of the East India Company, who have doubled their annual donation, claims the best exertions

* His Majesty Shahen Shah, King of Persia.

† The Earl of Auckland; James Alexander, Esq.; Sir Thomas Baring, Bart.; the Chevalier de Castebranco; John Curteis, Esq.; Lieutenant-Colonel J. D'Arcy; John Goldingham, Esq.; Archibald Hamilton, Esq.; the Right Hon. Sir Alexander Johnston; J. R. Stewart, Esq.; George Strachey, Esq.

‡ T. P. B. Biscoe, Esq.; F. H. Brett, Esq.; Sir Howard Douglas, Bart., M.P.; Captain R. P. Fulcher; W. R. Hamilton, Esq.; Major T. B. Jervis; the Rev. C. W. I. J. es; Wm. Lavie, Esq.; Edmund F. Moore, Esq.; Sir Thomas Phillips; Frederick Schönerstedt, Esq.; Lieutenant T. Waghorn, R.N.

§ Ali Mahommed Khan; Arthur Ashpitel, Esq.; J. H. Crawford, Esq.; Grant H. T. Heatley, Esq.; John Hutt, Esq.; W. H. Martin, Esq.; Lieutenant-Colonel Peter J. Petit, C.B.; the Rev. Theodore Preston; Edward C. Ravenshaw, Esq.; T. C. Robertson, Esq.; John Stewart, Esq.; Henry H. Thomas, Esq. |

|| C. Kelsart, Esq., Trinidad.

of every Member of the Society to raise the annual income to an amount sufficient to enable the Council to carry out with liberality the designs and operations for the furtherance of which it has been associated.

Among the donations presented during the past year, is a cast of the Obelisk of Nineveh, which we owe to the munificence of Sir George Staunton, from whom the library and museum of the Society have received very many valuable contributions. This obelisk presents a succession of bas-reliefs on its surface, which make it one of the most interesting relics of the ancient times to which it must be attributed. It contains also a long and excellently preserved inscription, detailing, it is supposed, year by year, the transactions of a reign of thirty-one years of a monarch whose name is unknown in history, and is yet but imperfectly deciphered. With the very limited means we possess of interpreting the meaning either of the sculptures or of the characters intended to explain them, we are only enabled to perceive that in a certain year, a warrior, whose name is but half read, had led armies against many cities; and that he brings home various trophies of victory, but consisting of objects unknown to us. More positive results, however, we doubt not, are now in the possession of Major Rawlinson, which will, in all probability, be communicated to the Society in the course of the year; for we derive a cheering prospect from the recent letters of this indefatigable archaeologist, who has laboured with such marvellous success in the other languages expressed in the characters formed of the same arrow-headed elements: after some fluctuations of hope and disappointment, he states that he now trusts to be able to read the inscriptions almost as satisfactorily as he read the Persian text at Behistun. The Society is also anxiously waiting for the completion of his dictionary of the Persepolitan language, of which one-half is already printed, and would be in the hands of the Members, were it not thought advisable to wait until the whole is completed. We also look forward to his long-promised memoir on the inscriptions in the so-called Median language, which are better preserved at Behistun than even the Persepolitan, and which must prove of great interest to philologists as being probably a specimen of the Tartar class of languages, now only traceable in their remains existing in modern dialects. Major Rawlinson was engaged in a memoir on the Median inscription, for which his knowledge of the Turkish branch of that class of language admirably fits him: this work was understood to be near completion; and we hope the more exciting discoveries from ancient Assyria may not much delay that portion of Major Rawlinson's labours.

The library of the Society has been enriched during the past year by some important donations. The very valuable collection of Oriental Manuscripts and printed books presented by John Romer, Esq., contains several works of high repute and interest, of which there were previously no copies

in the Society's possession. Nineteen of the Manuscripts are in Persian, and three in Hindustani. Among the former are copies of the *Farhang i Jahangiri*; the *Burhān i Kāfi*; the *Shah Namah*; the *Nigāristān*, and *Ayār Dānish*. There is also a volume of the *Rauzat us safa*; a history of Guzerat, in three volumes, entitled the *Mirat i Ahmadi*; a copy of the *Jahangir namah*; of the *Tarikh i Sind*; and other works of historical or literary interest. This department has also received a very interesting accession in two Persian Manuscripts, presented by Sir Claude Wade. The first of these is called "*Tarikh i Maharāja Ranjit Singh*;" and contains a history of that monarch's family, and an account of his life up to the year 1831. It was written by Lala Sohan Lal, who filled the office of historian at the Sikh Court; and it was presented to Sir Claude by the Maharāja himself. The other volume is the "*Tarikh i Dāūdputra*," or History of the Nawābs of the Bhāwalpūr State. This also is a work recognised as an authority by the house of Bhāwalpūr; and was given to Sir Claude by the reigning Chief. A copy of Baron Hügel's "*Kashmir und das Reich der Siek*," richly bound, has been received from the noble author. The series of plates in the work, illustrative of natural history are beautifully coloured; and are valuable, as only a very few copies have received this additional illustration.

The Council adverts with pleasure to the edition of a code of laws in the Pali language, which is in course of preparation by Dr. Rost, under the auspices, and at the expense, of the Right Honourable the President of the Society. This code, the existence of which has been unknown to Europeans, was discovered by Dr. Rost among the Manuscripts at the British Museum. It claims to have been promulgated in the 5th century of the Christian era, and is, at all events, of considerable antiquity, though its form and contents shew it to have been founded on the laws of Manu, as might be inferred from the name of its reputed author, *Manusara*. It is accompanied by a translation and commentary in the Burmese language, adapting its provisions to the wants of more recent times; and appears to be the text book of the Burman courts of law, as well of those of the other Buddhistic countries beyond the Ganges.

Oriental Translation Fund.

The Committee of the Oriental Translation Fund have recently published a very curious work of ecclesiastical antiquity, entitled "*The Apostolic Constitutions; or Canons of the Apostles*," in Coptic, with an English translation, by the Venerable H. Tattam, D.D., Archdeacon of Bedford. This work is not the same as the "*Didascalia or Apostolic Constitutions*," translated by Mr. T. Pell Platt from the Ethiopic, and published by the Committee several years since. The latter work, though highly interesting, appears to contain rather a gloss upon certain canons than the canons them-

selves, of which it enumerates only twenty-two; or it is greatly interpolated and corrupted, possibly by the Ebionites, but more probably in order to justify the retention of Jewish rites in the Abyssinian Church. Dr. Tattam's work consists of a translation of that ancient code (in seven books and numerous canons) of ecclesiastical regulations, which may be more properly styled "The Apostolic Canons," and which possesses some authority and value; for although their composition cannot be attributed either to the Apostles, or to Clement of Rome, whose name they have sometimes borne, yet they are of very remote antiquity, and contain those rites and ceremonies which have ever been observed in the Eastern Church, and which differ from those of the Western. They were finally recognised and adopted in the Council held at Constantinople, A.D. 692, called the Council in Trullo,* a Council which the Westerns never consented to receive.

Since the last Annual Meeting of the Society, the Committee have accepted an offer, from the Rev. W. Cureton, of an English translation of "Analecta Biographica Syriacè; or Lives of Eminent Bishops and others, illustrative of the History of the Church in the East, during the fourth, fifth, and sixth centuries."

The Committee, in January last, had the satisfaction to receive from Professor Flügel, a notification that the causes which had so long retarded the continuation of his labours on his great work, "Haji Khalfæ Lexicon Encyclopædicum et Bibliographicum," are now removed; and that he hopes to be enabled to forward the fifth volume to England in the course of the year. Forty sheets are already printed, from which it appears that the Lexicon has advanced as far as the letter Lām.

The Committee are gratified in receiving assurances of a renewed interest in their proceedings; and only regret that from a diminution in the number of Subscribers, arising principally from deaths, the assistance which they can offer to translators is still extremely inadequate to the claims they would desire to recognize and encourage.

Oriental Text Society.

The report of the Oriental Text Society for the past year will be more interesting to its subscribers from the number of new works announced for publication, than for what has been actually printed, the Society's operations having been directed rather to the completion of works already named in a former report, but which could not be delivered to the subscribers within the limit of the last anniversary.

Its new undertakings are chiefly in Persian; in which, for the historical part, Mr. Morley prepares an edition of Báfhaki's rare and valuable History

* The Sixth General Council was held at Constantinople, under Constantine Pogonatus, in 680, against Monothelites. The Seventh called that in Trullo, under Justinian the Second, in 692, also styled Quinisextum.)

of Sultan Masaud of Ghazna, of which only two manuscripts, both incomplete, are known to exist. From the union of these two, a perfect text is obtained; and considerable progress has already been made in its preparation.

In the interval between his editions of the poems of the Khamseh of Jami, Professor Falconer prints the Nigáristán of Juwaini, a valuable and elegantly written collection of apologues, in the style of the Gulistán, and which, in distinction from the historical work of the same name by Abdul Ghaffár, may be called the moral, or didactic "Picture Gallery." The learned Professor in the mean time continues the publication of Jami's poems: and announces, as the next in the series, the romance of Selánán and Absál, which has hitherto remained wholly untouched in text or translation.

Mr. Bland proposes an edition of the "Macámáti Hamídí;" the Macamahs, or *Séances* of Hamíduddín of Balkh, a Persian imitation of the celebrated work of Harírí. This composition is highly curious, as an attempt to exercise in a language of so simple a nature as the Persian, the rhetorical and complicated style hitherto only exhibited in the more copious and flexible idioms of the Semitic branch. Copies of the work are only found in the British Museum, and in the collection of the late Sir William Ouseley, at the Bodleian Library.

Mr. Bland also undertakes a text of the Diwan of the Turkish poet Báki, from a collation, already made, of numerous manuscripts. Báki is considered the Háfiz of Osmanli literature, and was justly selected for translation, many years since, by the learned taste of Von Hammer, who styled him the Prince of Turkish poets; but the text, by a singular chance, has been omitted in the extensive series of Diwans printed at the native press in Constantinople. Its publication in this country will be a novelty in Oriental Literature; and forms a commencement, it is hoped, towards removing the reproach already cast on us by our continental neighbours, of neglecting the study and encouragement of so rich and polished a language as that of European Turkey.

AUDITORS' REPORT.

The Accounts of the Society for the year 1848 have been this day audited by the undersigned, who have to report the correctness of the books, and that the entries therein are properly vouched and duly authenticated. The Accounts of the removal have not yet been finally closed, but the Auditors are glad to have to remark that the total amount is under what was anticipated it would amount to.

The RECEIPTS during the year for Annual Subscriptions, Admission Fees, and Compositions, amount to	£	s.	d.
From the Honourable East India Company	210	0	0
From Dividends on Consols	56	11	10
From Oriental Translation Fund	30	0	0
Publications sold	22	3	3
	<hr/>		
	£918	6	1
Proceeds of £642 17s. 1d. Consols sold	564	3	9
Balance brought from 1847	283	11	10

Making a total, on the debit side of the Account for 1848, of £1766 1 8

The DISBURSEMENTS during the year 1848 were as follow :—

House Rent (Grafton Street)	264	13	7
House Rent (New Burlington Street)	140	0	0
Rates and Taxes	29	14	0
House Expenses	110	11	5
Salaries and Wages	262	12	0
Printing Journal (No. XVIII)	230	13	5
Sundry Disbursements	84	4	9
	<hr/>		
	£1122	9	2

Total Imprests to House Committee for Repairs at 14, Grafton Street, and for Fixtures, Carpenter's Work, Bookcases, Carpets, Blinds, &c., at 5, New Burlington Street

450 0 0

Giving a total expenditure in 1848 of

£1672 9 2

And leaving a Balance in hand, on the 31st Dec. 1848, of

[Assets, £1300 in 3 per Cent. Consols.]

The reading of the Reports having been concluded, CAPTAIN EASTWICK moved :—

“That the Report of the Council, and that of the Auditors, now read, be received ; and that the thanks of the Meeting be given to the Auditors for their able and satisfactory discharge of their important duties.”

The Motion was seconded by GENERAL DE LA MOTTE, and carried unanimously.

SIR GEORGE STAUNTON moved the thanks of the Meeting to the President for his kindness in taking the chair that day, and for the great interest he had long taken in the promotion of the objects of the Society. Sir George said he was much gratified in being entrusted with this motion, as he was confident it would receive the cordial and unanimous support of the Meeting. He had not, indeed, the topics which it was most usual to advance on such occasions : he could not appeal to the past services of the President, as those who may be entrusted with a similar motion at future anniversaries will undoubtedly be able to do ; for his Lordship had only been recently elected, and we had at present the gratification of seeing him in the chair of the Society for the first time. Yet, he would undertake to say, that on no former occasion was the President in the chair better entitled to the grateful acknowledgments of the Society. High as had been the character and great the services of our former Presidents, the Society had in every instance possessed some claim upon them, either on the score of their official station in connexion with India, or their long residence in that country. Upon the Noble Lord, who had now so kindly and readily responded to the wishes of the Council, by allowing himself to be put in nomination as President, we could not make any such claim. We could not expect him to undertake an office of such responsibility, and which must unavoidably make some demand upon his valuable time, already no doubt fully occupied, except upon the score of his well known attachment to the literary objects of the Society, and his conviction as a statesman and a public man, that by giving his support and countenance to a Society constituted for such purposes, he would be doing a public good, and performing a public duty. This Society has been constituted for the purpose of diffusing, without any kind of political bias or influence, a general knowledge of the scientific attainments and literature, the manners and the customs of the people of Asia, and especially of that large portion of them that Providence has placed under British rule. It is also constituted for the purpose of inquiring into and making better known the arts, manufactures, and productions of those countries. It cannot be necessary to point out the valuable information in various ways which may be derived from the labours of such a Society, as subsidiary to the good government of our distant, but most important, provinces in the East, and the extensive and mutually beneficial commerce carrying on between them and the ruling State. Sir George said he was persuaded

that our President would receive every possible assistance in his office from our learned and able Director, from our able and zealous Secretary, and from all the other official members of the Society. Yet his Lordship's position could certainly not be esteemed altogether a sinecure. The Council had recently, by an effort, which the state of the finances of the Society must have absolutely forbidden, but for the generous and well-timed liberality of the East India Company, accomplished the removal of the Society to a more commodious and spacious residence, where its valuable collection could be more advantageously displayed, and the various other objects of the Society more effectually carried out; but it could not be said that we had yet reaped the fruits of this change. The progressive improvement in our position which we had anticipated, we now confidently rely will take place under his Lordship's administration. Sir George said, he thought the Society might reasonably calculate that much benefit would accrue, not only from his Lordship's personal exertion, but from his example. He said he could not resist taking this opportunity of endeavouring to correct an error which seemed to him to prevail very generally, respecting the character and constitution of our Society. It had been too often considered and represented as in the main a Society of mere Orientals; and that the few not connected with Asia, who had joined it as amateurs, were rather to be considered as only incidental exceptions to the general rule. Sir George said he felt convinced that the Royal Asiatic Society, however paradoxical it might appear, would not be in a position fully to carry out all the purposes for which it was instituted, until its numbers were so extensively recruited from the community at large in this country, that the professed Orientalists belonging to it (though he trusted much more numerous than at present) would still be greatly outnumbered by those who had no Eastern tie or connexion whatever. He said it was true that the papers which enrich our transactions, the lectures which it is to be hoped will be delivered within these walls, and the collections that confer interest on our Museum, could only be contributed, as heretofore, by those gentlemen who, after spending a great portion of their time in the East, had the disinterested patriotism to sacrifice some of that leisure and repose to which they were so well entitled, in imparting a portion of their acquired knowledge, the fruits of their earlier labours, to their countrymen at home. But what are papers without readers! Lectures without auditors! a Museum without visitors! Our Orientalists cannot be expected to come forward with their contributions unless stimulated and encouraged to do so by some unequivocal testimony of the interest which the public at large take in their labour and researches. The evils of ignorance on Oriental subjects, even in places in which they have a positive right on our careful study and attention, could not be more forcibly illustrated than by referring to the House of Commons in former times, where (as he was sure his Lordship would well remember) an Indian motion used to be considered a *dinner bell*! not

surely through indifference to the condition of the millions of Hindus under our rule, and whose fate might depend upon the issue, but from that utter ignorance of all details concerning them, which could not but make such questions altogether distasteful, and consequently often abandoned to mere officials, in despair. It is the province of the Royal Asiatic Society to diffuse generally throughout the country the information by which this mist of ignorance may be dispelled; to bring together into one focus those who are able to impart this knowledge, and those who are desirous to receive it; and who are, in many instances, under public and moral obligation as legislators, to seek it. Sir George apologised for detaining the Society so long, and begged again to recommend the vote of thanks to the President, to the cordial approval of the Meeting.

COLONEL SYKES rose to second the motion. He said that few words were necessary in doing so. His Lordship's munificent patronage of the fine arts in general, and of Oriental literature, by the printing of the translation of Bopp's Comparative Grammar, and now by the preparation and publication of the Pali Code, the work of a Buddhist Menu, was the best guarantee of his Lordship's devotion to the interests of the Society. He felt confident that the stimulus which his Lordship had so successfully applied elsewhere would find a correspondent action in the working of the Society; and that the Society would speedily resume that position to which the very distinguished character and abilities of so many of its members gave it a just title.

LORD ELLESMERE requested the indulgence of the meeting for some difficulty and embarrassment in the performance of the simple and usual duty of returning thanks for the honour conferred upon him by the resolution just passed. For some such embarrassment, the novelty of the position in which he had the honour, for the first time, to address them, might be in itself an excuse. On this occasion, however, there were circumstances connected with his acceptance of the office he held, which increased that embarrassment, for they awakened feelings which, to this or any other audience, he could ill express to his own satisfaction. If he had not enjoyed the advantage of his lamented predecessor, Lord Auckland's, acquaintance, he might, with the assistance of their officers, and the instruction of their reports, have told them of services which Lord Auckland had rendered to their Society, and of the loss it had sustained in the sanction which his high character and abilities had given to their pursuits and labours. It happened, however, that for many years past, both before Lord Auckland's appointment to India, and subsequent to his return, he had enjoyed the privilege of his warm friendship and intimate acquaintance. Their intercourse had been interrupted and diminished by Lord Auckland's official avocations, but their friendship had never cooled. He could not forget that one of the last

occasions on which Lord Auckland had been able to abstract himself from those duties, the pressure of which had probably shortened his existence, for a brief enjoyment of those country pursuits which no younger man enjoyed more keenly, had been given to his (Lord Ellesmere's) domestic circle. He begged pardon for intruding these personal matters, but the Society would see how difficult it was for him to draw the line between the topics of public and private regret for such a loss. He believed that Lord Auckland had done much in India for the interests of education. This was consistent with what had always appeared to Lord Ellesmere a conspicuous feature of his character, a high value for mental cultivation, and a desire to promote its extension and improve its quality. If he remembered right, for he had to look back many years, one of the first occasions of their intercourse was connected with the establishment of two societies in London, the Zoological and the London University. He was not surprised that Lord Auckland should have returned from his Indian Government with a high appreciation of the labours of those whom he (Lord Ellesmere) was now addressing. He was not surprised that the contemplation of the monuments of fallen empires, of dynasties overthrown by our arms, and of superstitions which even our arms could not overthrow, or the influence of our purer faith extinguish, should have excited in him a warm sympathy with the pursuits of those who make it their business to trace the history of those dynasties, or decypher the abstruse characters with which these monuments are inscribed. In these respects he hoped that he (Lord Ellesmere) should be found to follow in his lamented predecessor's footsteps. In thanking Sir G. Staunton for the kindness of his expressions in moving the resolution, he would say that Sir George had expressed in better language than he could use the true and only motives which had dictated his acceptance of the office to which he had been elected. He had reason given him to believe that, at this particular moment, he might by that acceptance consult the convenience, and, to some slight extent, promote the objects of this Society, and he could only hope that his success might bear some proportion to his wishes. The perusal of the Report had suggested but too many other subjects of regret; among which he had to mention the loss of that distinguished public servant and zealous friend of this society, Sir A. Johnston. From him he (Lord Ellesmere) had just received a kind assurance of support in his new office, when it was followed by the melancholy intelligence of his loss. It would be wasting time if he should dwell on those subjects which had so successfully engaged the valuable labours of so many learned men: they were much better known to all present than to himself, but scarcely more highly appreciated. He hoped to be pardoned if he mentioned the subject which had excited a warm interest generally,—the remains of the ancient Assyria, brought to this country, and illustrated by the skill and labour of Layard and Rawlinson; and he trusted from what he had heard that the further assistance of the Government would not be wanting to prosecute the

researches that Gentleman had so ably commenced; for great as the result had been, he felt assured we were as yet only on the threshold of what was to be done, that we were on the verge of great discoveries. Everything might be expected from the liberality of the Government, and the efforts of the learned men now engaged on the most interesting course of archæological investigation perhaps which had ever been presented. He was unable to return thanks as he ought for the honour done him. Sir George Staunton had rightly interpreted the feelings which had induced him to accept the office tendered to him, for he could only consider himself an interloper on ground which he ought not to presume to tread on: but he hoped that even as such he might be of some use in furtherance of those high and important objects for which the Members of this Society were associated. His Lordship concluded by repeating his thanks.

COLONEL SYKES said that by the absence of a Member of the Society, he had been unexpectedly called upon to move a vote of thanks; but the qualifications of the individual to be thanked rendered the duty equally easy and pleasing, whether on his part, or on that of any other Member. A name and fame of European standing, and evidences of erudition exhibited so often in print, and at the table of the Society, were sufficient warrant for the vote he had now to propose. When he mentioned the Director of the Society, he was sure that all would concur in opinion with him that he had no onerous task imposed upon him. The Members felt that their Director was their best, and most valued contributor, and that without his aid, their reputation could not have had so broad a basis as it now stood upon. There could be little question, that unless the Society, in addition to its archæological and merely literary labours, could go before the public as a useful body in communicating facts illustrative of the religious, moral, social, and political condition of the people of Asia, and give an account of Eastern productions, as well as in communicating to the East the great results of European progress, that it did but the half, and the least valuable half, of its duty. It was only through the exertions of the Director, and of other men treading in his steps, that the whole objects of the Society could be accomplished. None might do the work so thoroughly and efficiently; but many Members of the Society had it in their power, by recording the information they possessed, to satisfy the public, that it was worthy of support, equally by those connected, as by those unconnected with the East. It was true that the Society wanted both members and money; but members and money were insufficient as far as the real interests of the Society were concerned, if the workings of the Society were confined to the walls of this house in a few routine, bi-monthly meetings, and the practical objects contemplated when the Society was founded were overlooked. Their Director had perseveringly laboured to prevent the Society from falling into this category; and he therefore moved—

"That the thanks of the Meeting be given to the Director for his constant attention to the best interests of the Society, and for his valuable contributions to the Journal."

NATHANIEL BLAND, Esq., seconded the motion, rather as a personal gratification to himself, than from a consideration that his own or any other individual's expression of feeling could add weight to the amount of gratitude, esteem, and affection due from the Society to their Director, as the constant attendant on, and frequent Chairman of their Meetings—the most learned contributor to their Journal, and on whom the mantle of the venerable Colebrooke had so worthily and justly descended.

The DIRECTOR thanked the Meeting for the continued expression of their satisfaction with his services, and assured them that as long as those services were thought of any value he should most readily and cheerfully render them. The prosperity and credit of the Society must ever have his warmest wishes, however imperfect his endeavours to promote them. He could promise little except his attendance, which should be given whenever opportunity permitted, although he hoped that he should now be occasionally relieved of that prominent part in the Society's proceedings, which the lamented loss of their late President had recently imposed upon him. The Society must look to its Members, whether in this country or abroad, for the most efficient means of maintaining its character and usefulness, for the communications respecting the literature and science of India, which gave interest to its meetings, and diffused by their publication a valuable body of information. We had no reason to complain of a dearth of such communication, and the ancient literature of the East, and the vegetable wealth of India had received, since the beginning of the season, invaluable illustration from the labours of Rawlinson and Thomas, of Newbold and Royle. As long as such contributors supplied the Society with communications, he doubted not of the continuance of its prosperity, although its funds might be subject to that temporary depression which was not unfrequent in the finances of literary institutions. Before sitting down, the Director adverted briefly to a few circumstances connected with the cultivation of Oriental letters, which might not yet have come under the notice of the Members generally. The first was the receipt of a curious specimen of typography and comparative philology—the Lord's Prayer in six hundred languages, printed under the superintendence of Mr. Auer, the head of the Imperial Press of Vienna. The part that most interested the Society was that which gave two hundred versions in their appropriate characters, including all the dialects of India, and a series of alphabets, comprehending all those of the East, beginning with the Egyptian Phonetic, the Cuneiform, and the Lāt alphabet of India. As representing a collection of moveable types, it might be asserted that all the printing-presses in the United Kingdom could not

produce its peer. The next subject was the progress making in the printing of the Vedas. Through the munificent patronage of the Court of Directors, the first volume of the Rig Veda was nearly completed, under the editorship of Dr. Müller, at Oxford. A translation in French of the two first books of the same Veda, by M. Langlois, has recently appeared at Paris. The like liberal encouragement of the Court had enabled Dr. Weber to undertake the publication of the Yajur Veda, at Berlin, of which also the first volume was about to appear. Professor Benfey had lately published the text of the Sâma Veda, at Göttingen, with great care and remarkable labour; so that there was now a prospect of our being possessed of the oldest authorities of the institutions and religion of the Hindus, without which nothing certain could be affirmed of their primitive condition. Lastly, he noticed the first volume of a work of great importance to the modern history of India, lately received, modestly entitled "A Bibliographical Index to the Mohammedan Historians of India," but containing copious original notices of the authors and their works, amounting to more than two hundred. This is the work of Mr. Elliot, of the Bengal Civil Service, and Secretary to the Government of India in the Foreign Department. It is to be hoped that his public avocations will not prevent his completing a publication which will be so rich a source of valuable and authentic materials for what is still wanting—a comprehensive history of India, from the days of Mahmud of Ghizni to the subversion of the Mogul Empire.

COLONEL SYKES begged leave to add to the enumeration of works mentioned by the Director, elucidatory of Védic literature, what his reserve had omitted, and that was the translation of the Rig Veda by the Director, which was proceeding *pari passu* with the publication of the text.

JOHN MACPHERSON MACLEOD, Esq., thought it was quite unnecessary to say a single word in support of the vote he had the honour to propose: all were so sensible of the services rendered by the Vice-Presidents and Council, that they felt they were only discharging a debt when they expressed publicly their high appreciation of the duties performed by those gentlemen. On the present occasion, they had additional cause to be grateful to the Vice-Presidents and Council, since the calamities that had befallen our Society in the demise of our late noble President, and of Sir Alexander Johnston, must have thrown additional duties on the surviving Members of the Council. He would therefore move—

"That the thanks of the Meeting be given to the Vice-Presidents and to the Council, for their great attention to the affairs of the Society."

SIR GEORGE STAUNTON said, that being the only Vice-President present, it fell to his lot to rise again, though unwilling to do so, after troubling the Meeting so much at length. He begged to return, in the name of his col-

leagues, their grateful thanks for the honour done them. They had lost a valuable Vice-President in the decease of Sir Alexander Johnston; but he trusted that their vote of this day would make them some amends by putting into his place his talented and valued friend Mr. Holt Mackenzie, who would be able to thank them far more ably and eloquently than he could do. He would only add, that he had always, from the beginning, been most desirous to promote the interests of the Society, and that his best services should be always at their command.

Mr. MACKENZIE said that he had great pleasure in submitting the motion of thanks to the Secretary, the Treasurer, and the Librarian, which had been placed in his hands. He need not, he believed, urge how much the efficiency of the Council and the success of the Society depended on those officers, who were to them in fact what a staff is to an army, and on whom they must greatly depend for their progress in the field of their peaceful conquests; and he was sure that he only gave utterance to the sentiments of every Member present when he bore his humble testimony to the zeal and ability with which the duties incumbent on those officers were discharged. From the satisfaction he felt in moving this resolution, there was only one drawback, arising from a circumstance which he knew his friends, the Secretary and Treasurer, lamented as much as he did—he meant the want of a wider scope for their labours—in a large number of Members, in a more abundant supply of papers for their Journal, in more frequent communications to enrich their proceedings, and in ampler pecuniary resources. He was sure their Treasurer would be delighted to have his trouble and responsibility multiplied tenfold by a tenfold increase of their income and disbursements; and their Secretary and his assistants would be delighted to afford to ten times the number of their present Members and Correspondents the same co-operation and assistance, which every one communicating with them, whether with the view of giving or of gaining information, always found cheerfully and ungrudgingly bestowed. He trusted that with the extension of the military and civil relations of our Government into new and interesting regions, the Society would find new fields of investigation; but in the oldest of our possessions there were abundant objects of interest to be explored, and to labourers in either field he was sure their Secretariat would heartily offer every facility they could desire in the prosecution of their researches and the publication of their results. He would only add that the works soon about to appear would satisfactorily evince that much more had been done during the past year than might be inferred from the proceedings actually published and circulated during the period, and concluded with moving—

“That the thanks of the Meeting be given to the Secretary, the Treasurer, and the Librarian, for their attention to the duties of their valuable offices.”

Mr. CLARKE expressed his gratitude for the kindness with which his humble services were always received, though he regretted that they fell far short of what was due to interests so important as those of the Royal Asiatic Society. The report which had just been read showed a diminution in the number of Members which occasioned him much concern, as he had hoped that a very different result would have speedily followed the great improvements which have been effected since the removal into their present house. He still hoped, however, that as those improvements should become more generally known, and more duly appreciated, a greater number of persons would be found desirous of participating in the advantages which the library and the collections of the Society hold out for the acquirement of information, and the prosecution of research in every subject of interest connected with India. Meantime, in reference to the withdrawal of several Members, on the ground of their being prevented, by absence from London or other causes, from attending the Meetings of the Society, he hoped that the Members of the Society would impress on any friends who might contemplate resignation on such grounds, that it is only by a large number of contributing members that the efficiency of their valuable Society can be maintained. He could not, however, but advert to the great advantage which the Society might derive from the exertions of a Secretary, who to zeal in the cause of the Society should add leisure and power to contribute largely to its publications, and to keep up an extensive correspondence in every quarter from which valuable information and important communications could be obtained. From such services the greatest benefits would assuredly ensue, and he would be rejoiced to yield the office with which he was now honoured to a gentleman thus qualified to do justice to the capabilities of the Royal Asiatic Society. He could not advert to the duties of the office of Secretary, without especially noticing the important services rendered by his talented and excellent Deputy Mr. Norris, and though the value of that gentleman's labours was now pretty generally known and estimated, he should feel it his duty to submit a special vote of recognition of his claims on the gratitude of the Society. Before doing so, however, he was desirous of introducing to the notice of the meeting Mr. John Dowson, who, since Mr. Norris's appointment to the office of translator to the Foreign Office, had contributed some share to the efficiency of the Secretariat. Mr. Dowson was not unknown to the Society, a paper of his having been published in the *Journal* of 1845; but they may not be aware that by unwearied industry and great energy, united to ability and talent, he had attained an extensive knowledge of Sanskrit and Persian, and some acquaintance with several of the cognate languages of India—to which he has added the study of the history, laws, and institutions of the Hindoo and Mahomedan inhabitants of our Indian possessions. Mr. Clarke concluded by moving—

“That the thanks of the Meeting be presented to Mr. Norris, the Assistant-Secretary, for his very valuable, talented, and laborious services, in

superintending the publication of Major Rawlinson's papers on the Cuneiform inscriptions, and for his other important operations in aid of the labours of this Society."

CHARLES ELLIOTT, Esq., returned thanks for the honour done him. He regretted that the duties of Treasurer were not more onerous, and trusted they would soon be so, as the valuable papers lately published, and now publishing by the Society, could not fail to excite a great degree of interest in the public mind, and attract new members.

Mr. Clarke's motion having been seconded, was carried unanimously.

Major J. A. MOORE and W. A. SHAW, Esq., having been appointed scrutineers, the Meeting proceeded to ballot for the Officers and Council of the Society for the year ensuing.

At the close of the ballot the Right Honourable Holt Mackenzie was declared unanimously elected a Vice-President of the Society, in the place of Sir Alexander Johnston, deceased.

The three other Vice-Presidents, the Director, the Treasurer, the Librarian, and the Secretary, were re-elected to their offices.

The following gentlemen were declared unanimously elected Members of the Council:—Samuel Ball, Esq.; N. Bland, Esq.; Harry Borrodale, Esq.; Major-General J. Briggs; Major-General J. Caulfield, C.B.; Sir Thomas Edward Colebrooke, Bart., M.P.; Walter Ewer, Esq.; James Ewing, Esq.; James Fergusson, Esq.; R. H. Holland, Esq.; J. MacPherson Macleod, Esq.; Major John A. Moore; Major-General Sir Wm. Morison, K.C.B., M.P.; William Platt, Esq.; Lieutenant-Colonel W. H. Sykes; and W. S. W. Vaux, Esq.

LONDON
PRINTED BY HARRISON AND SON,
ST. MARTIN'S LANE.

(Directions to Binders of the R. A. S. Journal.—One copy of the following Notice is to be bound up at the end of Vol. XI, and one copy at the end of Vol. XIV.)

The incomplete condition of the XIth and XIVth volumes of the Journal has been several times brought to the notice of the Council by members desirous of having their copies bound. The first-mentioned volume, containing the ancient Persian work by Sir H. C. Rawlinson, was left unfinished in consequence of the important discoveries made at Nineveh, which placed in that gentleman's hands an immense amount of new material in a language and character which had hitherto been almost wholly unattempted, and gave promise of affording an insight into the history of ages far more remote than any thing discoverable in the Persian inscriptions; and moreover, these last had already been fully investigated, so that any further interest in them would be philological only. The great amount of labour requisite for the investigation of this new material has hitherto prevented our learned Member from continuing the interrupted volume, and he is now of opinion that the subject has been exhausted by other investigators, who have left him nothing to communicate.

The XIVth volume, on the Assyrian and Babylonian Inscriptions, was interrupted by the departure of Sir H. Rawlinson from England on the important mission intrusted to him by Her Majesty's Government. The duties connected with the mission, followed by the laborious task of editing and publishing the Assyrian and Babylonian inscriptions in the British Museum, have proved an irremovable obstacle to continuing the volume. Sir H. Rawlinson is now persuaded that, considering the very great advances made in the study since the first part was printed, any attempt to complete the volume would result in a patchwork of which one half would be very unequal to the other.

The Council have therefore decided on issuing printed notices, to be bound up with the published parts of these two volumes, giving the reasons why they have been left incomplete.
